Preface	11
Methodological Issues	13
Terminological and Adapted Physical Education Standards	15
1 Introduction in the Chronic Diseases Problematic	23
2 Prevention and Management of Chronic Disease	33
2.1 Congestive heart failure	33
2.2 Type 2 diabetes disease	35
2.3 Chronic kidney disease	37
2.4 Chronic obstructive pulmonary disease	39
3 Health-Social Benefits of Regular Exercise on the Management of Chronic Disease, Disability, Impairment	41
3.1 Benefits of regular exercise on the management of chronic disease, disability, impairment	41
3.2 Benefits of regular physical activity for persons with congestive heart failure	45
3.3 Benefits of regular physical activity for persons with type 2 diabetes	46
3.4 Benefits of regular physical activity for patients with chronic kidney disease	50
3.5 Benefits of regular physical activity for persons with chronic obstructive pulmonary disease	52
4 Health-Social Benefits of Controlled Physical Activities in Children with Chronic Disease, Disability and Impairment	55
4.1 Controlled physical activities in challenging children and social consequences	56
4.2 Health benefits of the controlled physical activities in challenging children	61
4.2.1 Hypo-kinesis in children with chronic disease, disability, impairment and forms of programming compensation	63

4.2.2	Social inclusion of a child with chronic disease, disability, impairment through physical activities	67
4.2.3	Availability of controlled physical activities in children with chronic disease, disability, impairment	69
4.3	Basic bio-psycho-social characteristics of child with chronic disease, disability, impairment	70
4.3.1	Problematic of chronic intellectual disease or disability in children	71
4.3.2	Problematic of chronic hearing disease or impairment in children	75
4.3.3	Problematic of visual chronic disease or impairment in children	77
4.3.4	Problematic of chronic motoric disease or physical disability in children	81
5	Live Strong Intervention and Exercise Programming	89
5.1	Exercise and testing recommendations for persons with chronic disease, disability, impairment	89
5.2	Training of flexibility, strength, and endurance	95
5.3	Training of balance and coordination	97
5.4	Exercise programming prescriptions	98
5.5	Examples of programming in case of chronic disease	103
5.5.1	Congestive heart failure	103
5.5.2	Type 2 diabetes	104
5.5.3	Chronic kidney disease	107
5.5.4	Chronic obstructive pulmonary disease	107
6	Two Research Studies on Topic of Controlled Physical Activities Effects in Children with Chronic Disease, Disability, Impairment	109
6.1	STUDY 1 - Investigation of availability of controlled physical activities for children with chronic disease, disability, impairment in the United Kingdom, Czech Republic, Bulgaria, and Slovenia	109
6.1.1	Objectives and hypotheses	109
6.1.2	Characteristic of investigated countries and samples of children with disability	110
6.1.3	Procedure and methods of the analytical investigative surveys in selected regions of EU countries	112
6.1.4	Results of analytical investigative surveys in selected regions of EU countries	113

6.1.5	Discussion on analytical investigative surveys in selected regions of EU countries	126
6.1.6	Conclusions to the analysis of the availability of controlled physical activities for children with intellectual disability, hearing, and visual impairment in selected regions of the EU	134
6.2	STUDY 2 – Monitoring of physical and psychosocial health changes in children with intellectual disability, hearing, and visual impairment participating in the intervention programme of controlled physical activities “Live Strong”	137
6.2.1	Objectives and Hypotheses	137
6.2.2	Subjects	137
6.2.3	Procedure	138
6.2.4	Methods	139
6.2.5	Results	145
6.2.6	Discussion	188
6.2.7	Conclusions	199
7	Practical Anchoring - Becoming and Staying Active with Chronic Disease, Disability, Impairment	201
7.1	Understanding the ultimate purpose behind the motivation to be active	201
7.2	Factors influencing exercise behaviours in mature population diagnosed with chronic disease, disability, impairment	204
7.3	Issues related to regular physical activity participation	211
7.4	Principles of exercise prescription for chronic disease, disability, impairment	218
7.5	Exercise test measures	222
7.6	Self-monitoring, battery of fitness tests for chronic disease, disability, impairment programming	224
	Conclusions, Recommendations	229
	References	233
	List of Figures	251
	List of Tables	259
	Abstract	263
	Summary	265

Name Index	269
General Index	275
A Annexes	283
A.1 Physical activity readiness questionnaire	283
A.2 International physical activity questionnaire	285
A.3 Health survey for adult chronic disease patients (SF36)	287
A.4 Exercise self-efficacy scale	290
A.5 State of activity readiness questionnaire (SOAR-Q)	291
A.6 State of activity readiness questionnaire (SOAR-Q)	292
A.7 Knowing your journey	293
