Abstract

Abstrakt

<i>List of selected publications which are part and parcel of the habilitation</i>	7
Introduction	10
1. Current state of the examined topic	12
1.1. <i>Processed cheese classification</i>	12
1.2. <i>Manufacture principles and steps in processed cheese manufacture</i>	13
2. Natural cheese in processed cheese production	16
3. Emulsifying salts in processed cheese production	22
3.1 <i>The role of emulsifying salts within the processed cheese matrix</i>	22
3.1.1 <i>Phosphate emulsifying salts</i>	25
3.1.2 <i>The effect of phosphate emulsifying salts on processed cheese properties</i>	26
3.2 <i>Citrate emulsifying salts</i>	32
4. Selected factors affecting the functional properties of processed cheese	35
4.1 <i>The impact of natural cheese and dairy fat source on the textural and rheological properties of processed cheese</i>	35
4.2 <i>The effect of melt pH on the textural and rheological properties of processed cheese</i>	37
4.3 <i>The impact of target parameters, holding time, agitation speed, melting temperature, cooling rate and storage time on processed cheese textural and rheological properties</i>	38
4.4 <i>The effect of rework addition on processed cheese textural and rheological properties</i>	46
5. Aim of the habilitation thesis	49
6. Main results of the work.	50
7. Contribution to science and practice	62
8. Conclusions	64
9. List of references	65
Curriculum vitae	78
Author's publishing activities	81
