	<i>Preface</i>	<i>page</i>	<i>xiii</i>
<b>PART ONE BASICS</b>			
1	Functional programming		5
	1.1 Basic types and functions		5
	1.2 Processing lists		7
	1.3 Inductive and recursive definitions		9
	1.4 Fusion		11
	1.5 Accumulating and tupling		14
	1.6 Chapter notes		16
	References		16
	Exercises		16
	Answers		19
2	Timing		25
	2.1 Asymptotic notation		25
	2.2 Estimating running times		27
	2.3 Running times in context		32
	2.4 Amortised running times		34
	2.5 Chapter notes		38
	References		38
	Exercises		38
	Answers		40
3	Useful data structures		43
	3.1 Symmetric lists		43

	3.2	Random-access lists	47
	3.3	Arrays	51
	3.4	Chapter notes	53
		References	54
		Exercises	54
		Answers	56
		<b>PART TWO DIVIDE AND CONQUER</b>	<b>59</b>
4		Binary search	63
	4.1	A one-dimensional search problem	63
	4.2	A two-dimensional search problem	67
	4.3	Binary search trees	73
	4.4	Dynamic sets	81
	4.5	Chapter notes	84
		References	84
		Exercises	85
		Answers	87
5		Sorting	93
	5.1	Quicksort	94
	5.2	Mergesort	96
	5.3	Heapsort	101
	5.4	Bucketsort and Radixsort	102
	5.5	Sorting sums	106
	5.6	Chapter notes	110
		References	110
		Exercises	111
		Answers	114
6		Selection	121
	6.1	Minimum and maximum	121
	6.2	Selection from one set	124
	6.3	Selection from two sets	128
	6.4	Selection from the complement of a set	132
	6.5	Chapter notes	135
		References	135
		Exercises	135
		Answers	137

	<b>PART THREE GREEDY ALGORITHMS</b>	141
7	Greedy algorithms on lists	145
	7.1 A generic greedy algorithm	145
	7.2 Greedy sorting algorithms	147
	7.3 Coin-changing	151
	7.4 Decimal fractions in T <sub>E</sub> X	156
	7.5 Nondeterministic functions and refinement	161
	7.6 Summary	165
	7.7 Chapter notes	165
	References	166
	Exercises	166
	Answers	170
8	Greedy algorithms on trees	177
	8.1 Minimum-height trees	177
	8.2 Huffman coding trees	187
	8.3 Priority queues	196
	8.4 Chapter notes	199
	References	199
	Exercises	199
	Answers	201
9	Greedy algorithms on graphs	205
	9.1 Graphs and spanning trees	205
	9.2 Kruskal's algorithm	208
	9.3 Disjoint sets and the union–find algorithm	211
	9.4 Prim's algorithm	215
	9.5 Single-source shortest paths	219
	9.6 Dijkstra's algorithm	220
	9.7 The jogger's problem	224
	9.8 Chapter notes	228
	References	228
	Exercises	229
	Answers	231
	<b>PART FOUR THINNING ALGORITHMS</b>	237
10	Introduction to thinning	241
	10.1 Theory	241
	10.2 Paths in a layered network	244
	10.3 Coin-changing revisited	248

141	10.4	The knapsack problem	252
142	10.5	A general thinning algorithm	255
142	10.6	Chapter notes	257
147		References	257
151		Exercises	257
155		Answers	261
11		Segments and subsequences	267
152	11.1	The longest upsequence	267
152	11.2	The longest common subsequence	270
155	11.3	A short segment with maximum sum	274
155	11.4	Chapter notes	280
170		References	281
177		Exercises	281
177		Answers	283
12		Partitions	289
185	12.1	Ways of generating partitions	289
189	12.2	Managing two bank accounts	291
189	12.3	The paragraph problem	294
189	12.4	Chapter notes	299
201		References	300
202		Exercises	300
202		Answers	303
208			
211			
215		<b>PART FIVE DYNAMIC PROGRAMMING</b>	
13		Efficient recursions	313
220	13.1	Two numeric examples	313
224	13.2	Knapsack revisited	316
228	13.3	Minimum-cost edit sequences	319
228	13.4	Longest common subsequence revisited	322
229	13.5	The shuttle-bus problem	323
231	13.6	Chapter notes	326
		References	326
		Exercises	327
237		Answers	330
14		Optimum bracketing	335
241	14.1	A cubic-time algorithm	336
244	14.2	A quadratic-time algorithm	339
248	14.3	Examples	341

14.4	Proof of monotonicity	345
14.5	Optimum binary search trees	347
14.6	The Garsia–Wachs algorithm	349
14.7	Chapter notes	358
	References	358
	Exercises	359
	Answers	362

## PART SIX EXHAUSTIVE SEARCH 365

15	Ways of searching	369
15.1	Implicit search and the $n$ -queens problem	369
15.2	Expressions with a given sum	376
15.3	Depth-first and breadth-first search	378
15.4	Lunar Landing	383
15.5	Forward planning	386
15.6	Rush Hour	389
15.7	Chapter notes	393
	References	394
	Exercises	395
	Answers	398
16	Heuristic search	405
16.1	Searching with an optimistic heuristic	406
16.2	Searching with a monotonic heuristic	411
16.3	Navigating a warehouse	415
16.4	The 8-puzzle	419
16.5	Chapter notes	425
	References	425
	Exercises	426
	Answers	428
