Preface *xi*

1	Introduction: public health, EcoHealth, planetary health, and you	1
1.1	Connections	1
1.2	Is this a dangerous book?	1
1.3	Three alternative approaches to health and the environment	5
1.3.1	EcoHealth	6
1.3.2	One Health	8
1.3.3	Planetary health	10
1.4	Global warming or climate change?	12
1.5	Depth of the human footprint	13
1.6	Introducing ecocrises interactions and health	15
1.7	Thresholds in the environment	18
1.8	Sustainability of human life on Earth	18
1.9	How did things get this bad?	20
1.10	Age of the Anthropocene	21
1.11	The hottest year on record	23
1.12	Organization of this book	23
	References	24

Part 1 Impact on ecosystems 31

2	Intricacies of ecosystems	33
2.1	The nature of nature and the pathway to understanding	33
2.2	Developing a historic understanding of ecology and ecosystems	33
2.2.1	Ancient Greece	33
2.2.2	Indigenous environmental knowledge	36
2.3	Modern ecology	41
2.3.1	Ecosystems	42
2.3.2	Biodiversity and the multitude of species	45
2.3.3	Regional and planet-wide natural interconnecting structures	53
2.3.4	Human-dominated ecosystems	54
2.3.5	Human ecology	55
	References	58

3 The social and technological making of environmental crises 63

- 3.1 Earth is now a different place 63
- 3.2 The *longue durée* and the rise and development of capitalism 63
- 3.2.1 Toward environment crises: critical turning points in human history 64
- 3.3 Environmental neoliberalism and the polluting elites 76
- 3.4 The Anthropocene or the Capitolocene? 81
- 3.5 The future of Eearth 83
- References 83

4 Engaging catastrophe 90

- 4.1 Introduction to a dismal theme 90
- 4.2 Prepping for doomsday 91
- 4.3 The record of past radical environmental change 94
- 4.3.1 Planetary change and mass extinction 94
- 4.3.2 The sixth mass extinction? 97
- 4.3.3 Planetary change in the archeological record 101
- 4.4 Popular concern with the environment 104
- 4.4.1 History of the environmental movement 105
- 4.4.2 Environmental crisis and the media 111
- References 112

5 A home in peril: major contemporary environmental crises 119

- 5.1 Case studies in contemporary environmental crises 119
- 5.2 Deforestation 119
- 5.3 Acidification of the oceans 122
- 5.4 Eutrophication of estuarine and coastal waters 125
- 5.5 Depletion of the oceans 132
- 5.6 Pollution of waters 137
- 5.7 Oil spills 141
- 5.8 Desertification 144
- 5.9 Concluding remarks 145
- References 146

6 The threat of ecocrises interaction 157

- 6.1 Compounded perturbations and ecological surprises 157
- 6.2 Climate change and polluted Superfund sites 158
- 6.3 Global toxic sites and climate change 164
- 6.3.1 Camp Century, Greenland 167
- 6.4 The ecocrises of unfettered mining 169
- 6.5 Cement, asbestos, and climate change 171
- 6.6 The climate change–nuclear ecocrisis nexus 177
- 6.6.1 Radiation and health 178
- 6.6.2 Climate change and nuclear facilities 180
- 6.7 Concluding remarks 183
- References 184

Part 2 Environmental crisis 193

7 Encountering degrading environments 195

- 7.1 Complexities of the environment–health nexus 195
- 7.2 Ecosystem distress syndrome 199
- 7.3 Case studies of degraded environments 201
 - 7.3.1 Degrading Arctic permafrost 201
 - 7.3.2 Drugged aquatic environments 208
- 7.4 Case studies of fragmented environments 209
 - 7.4.1 Fragmenting sky islands 212
 - 7.4.2 Fragmenting forests 213
 - 7.4.3 Fragmenting grasslands 215
- 7.5 The dilemma of simplified environments 216
- 7.6 Fragmented environments, ticks, and human health 217
- 7.7 Solastalgia: distress linked to environmental change 219
- References 220

8 Climate change, crisis enhancement 229

- 8.1 Consensus on climate change 229
- 8.2 Driving climate change 230
- 8.3 How serious is climate change? 232
- 8.4 Drought and heatwaves 236
- 8.5 Melting land ice and tundra 241
- 8.6 Coastal flooding 245
- 8.7 The polar vortex 248
- 8.8 Hurricanes, cyclones, typhoons, and tropical storms 249
- 8.9 Infectious diseases 250
- 8.10 Food loss to heat and insect pests 253
- References 262

9 Business as deadly usual: resisting environmental science 272

- 9.1 A consistent pattern of climate change denial 272
- 9.2 A time of questioning environmental science 274
- 9.3 Skirting accountability: polluters, innocence, and the victim slot 278
- 9.4 Fighting for the “right” to pollute 279
- 9.5 Deadly business: Big Energy and the denial of climate change 282
 - 9.5.1 Phase I: claiming global warming is a hoax 284
 - 9.5.2 Phase II: admitting global warming is real, denying its urgency 290
 - 9.5.3 Phase III: arguing we’re all in it together 292
- 9.6 The politics of climate change denial 294
- 9.7 The institutions of the climate change denial machine 295
- 9.8 Taking climate change deniers to court 298
- 9.9 Fundamentalist denial 299
- References 300

Part 3 Human health risks with changing environment 309

10 Crossing boundaries and thresholds 311

- 10.1 Are there biophysical boundaries for humanity? 311
- 10.2 Key biogeochemical and biophysical Earth system processes 311
- 10.3 Exploring planetary boundaries 313
 - 10.3.1 Global environmental governance and planetary boundaries 314
 - 10.3.2 Modification of values used to define specific planetary boundary dimensions 316
 - 10.3.3 Sustainable development goals and planetary boundaries 317
 - 10.3.4 Downscaling planetary-level to subglobal boundaries 320
- 10.4 Environmental tipping points 325
- References 332

11 Time for change? Toward sustainability, toward life 337

- 11.1 Why go to school? 337
- 11.2 Social movements 340
 - 11.2.1 The local level 341
 - 11.2.2 The regional/national level 346
 - 11.2.3 The global level 354
- 11.3 Stepping toward change 359
- 11.4 Toward changing the system: addressing ultimate causes 362
- 11.5 The solidarity economy 363
- 11.6 Stateless democracy 365
- 11.7 Ecosocialism 367
- References 368
