

Table of Content

Preface	7
The Methods of Paintings Protection	9
Summary of the Results	10
Peptid Hydrolase Activity	14
Protein Hydrolysis with CPB from <i>E. superba</i> and Collagenase (<i>Clostridium histolyticum</i>)	18
Consolidation of the Painting "Wrangel's Children"	19
Purification of Mold Enzymes	28
Purification of Proteolytic Enzymes (Photo 16)	29
Amino Acids after Hydrolysis of Glue from the Painting "Wrangel's children" - Enzymes Protease II	29
The Activity of Mold Enzymes Protease I a Protease II	31
Influence of Metal Ions on Proteolytic Activity of Purified Enzymes from the Painting Wrangel's children	32
Proteolytic Activity	36
The Degradation Rate of the Simulated Glue	39
The Glue Impregnation	41
Conclusion	45
Giuseppe Arcimboldo Portrait of Rudolf II	48
The Varnish Removal	51
Trypsin-like Enzymes from <i>E. superba</i>	53
Termal Stability Purified Enzymes Trypsin-like from <i>E. superba</i>	53
Effect of Inhibitor on Enzymatic Activity	54
Conclusion	57
Importance of Chemical Modification Methods for Sudyng the Function of Paintings Binder	58
Conclusion	70
Skokloster, a Most Remarkable Place and one of the Great Houses in Europe	71
References	79
