Overview of the book

Part 1	Animals and their environment		3
1	The diversity of animals and their interactions with natural environments		
2	Energy metabolism: generating energy from food		
3	Cells and organisms, and their interactions with their environment		
	nodson patangul interpretation 2.8. 754.		
Part 2	Water and salts		123
4	Body fluid regulation: principles and processes		124
5	Osmotic and ionic regulation in aquatic animals	28 pool mont voice suits tendreme lade	149
6	Water balance of land animals	Section 2	195
7	Kidneys and excretion		243
	2.5 Temperature change over three ilmether		
Part 3	Temperature		303
8	Temperature and the principles of heat exchange		304
9	Temperature regulation in ectotherms		326
10	Temperature regulation in endotherms		382
	there has been the first than the server		
Part 4	Oxygen		437
- 11	The respiratory gases, gas exchange and transpor	t see and sales	438
12	Respiratory systems		456
13	Transport in respiratory systems and acid—base b.	alance	511
14	Cardiovascular systems –		553
15	Environmental and behavioural influences on the	e cardiorespiratory system	604
Part F	Condition to Minimum to City		663
raits	Coordination and integration		003
16	Neurons, nerves and nervous systems		664
17	How animals sense their environments		725
18	Muscles and animal movement	241 bank no garrell element might who	783
19	Hormones		842
20	Reproduction		899
21	Control of sodium, water and calcium balance		946
22	Integration of the respiratory and circulatory syst	ems	997
	etter tetter in emstest y unaform? 8/81		1045
	Appendix Index		1047

Contents

natural environments 1.1 What is environmental animal physiology? 1.2 Natural environments: where and under what conditions do animals live? 1.3 How animal groups are related to each other 1.4 Animal diversity 2.5 How do we describe different thermoregulatory strategies? 3.6 How do we describe different thermoregulatory strategies? 3.7 Hermal relations of ectotherms 3.8 How do we describe different thermoregulatory strategies? 3.8 How do we describe different thermoregulatory strategies? 3.9 Lemergy metabolism: generating energy from food 4.1 What is energy? 4.2 Metabolism: generating energy from food 2.1 What is energy? 4.2 Metabolism: generating energy from food 4.3 Energy intake from food 2.4 Intermediary metabolism and metabolic rates 4.5 Energy intake from food 3.0 Cells and organisms, and their interactions with their environment 4.1 Animal body fluids 4.2 General properties of animal cells 4.3 Ecencal properties of animal cells 4.4 Animal body fluids 4.5 Energy intake from disorded in extracting energy from foodstuff 4.6 How endotherms and their environments 4.7 Transepithelial transport 4.8 Body fluid regulation: principles and processes 4.9 Part 2 Water and salts 4.1 Animal body fluids 4.2 Transepithelial transport 4.3 Regulation of cell volume 4.4 Animal body fluids 4.5 Animals living in freshwater habitats 5.1 Marine animals 4.9 Living cold or subzero conditions 4.0 Heat requirements of endotherms 4.1 Animal body fluids 4.2 Transepithelial transport 4.3 Regulation of cell volume 4.4 Dransel and salts 4.5 Respiratory systems 4.6 Water loss from animals living on land 4.7 Transport and conditions of animals living on land 4.8 Again and scales and conditions and cond	Part	1 Animals and their environment	3	Part 3 Temperature	303
1.1 What is environmental animal physiology? 1.2 Natural environments where and under what conditions do a minals live? 9 8.4 General processes of heat exchange 3.3 Environmental temperature variation 3.4 Animal diversity 2.5 How do we describe different thermoregulatory strategies? 3.5 Environmental change and animal diversity 3.6 Jemperature regulation in ectotherms 3.7 Jemperature regulation in ectotherms 3.8 Surviving cold or subzero conditions 3.9 Surviving cold or subzero conditions 3.0 Surviving cold or subzero conditions 3.1 Physical principles govern the flow of heat and the movement of lons and molecules in animals 3.2 General properties of animal cells 3.3 Interactions of animal estimates in their environments 3.1 Physical principles govern the flow of heat and the movement of lons and molecules in animals 3.2 General properties of animal cells 3.3 Interactions of animal estimates in their environments 3.4 Body fluid regulation principles and processes 4.1 Animal body fluids 4.2 Transephthelial transport 4.3 Regulation of cell volume 4.4 Naminal body fluids 4.5 Marine animals 5.1 Marine animals 5.1 Marine animals 5.2 Animals living in freshwater habitats 5.3 Osmoregulation in equaltic animals 5.4 Mater balance of fland animals 5.5 Water balance of fland animals 5.6 Water balance of fland animals 5.7 Kidneys and excretion 7.1 Production of the primary urine 7.2 Kidney subules and their functions 7.3 Invertebrate explainting 7.5 Water loss from animals living on land 7.6 Water loss from animals living on land 7.7 Production of the primary urine 7.8 Regulation of cell volume 7.9 Production of the primary urine 7.9 Kidneys and excretion 7.1 Production of the primary urine 7.2 Kidney tubules and their functions 7.3 Invertebrate nephridia 7.5 Water loss from animals living on land 7.6 Water loss from animals living on land 7.7 With the control of the primary urine 7.8 Regulation of cell volume 7.9 Regulation of cell v	1 The	diversity of animals and their interactions with		8 Temperature and the principles of heat exchange	304
1.2 Natural environments: where and under what conditions do animals live? 9 8.4 General processes of heat exchange 3 3 1.3 How animal groups are related to each other 19 8.5 How do we describe different thermoregulatory strategies? 3.1 1.5 Environmental change and animal diversity 36 9 Temperature regulation in ectotherms 32.1 What is energy? 36 9 Temperature regulation in ectotherms 37.2 Energy metabolism: generating energy from food 45 9.1 Thermal relations of ectotherms with their environments 3.2 Energy intake from food 45 9.2 Surviving cold or subzero conditions 3.3 Temperature change over three timeframes: implications for tissue functioning in ectotherms 3.1 Physical principles govern the flow of heat and the movement of ions and molecules in animals 91 10.2 How endotherms regulate their body temperature regulation in endotherms 3.3 Interactions of animals with their environments 113 Part 4 Oxygen 437 Part 2 Water and salts 123 11 The respiratory gases, gas exchange and transport 4.1 Animal body fluids 124 12 Respiratory gases, gas exchange and transport 4.2 Transepithelial transport 131 12.1 Types of gas exchange in water 4.4 Marine animals 149 12.2 Gas exchange in air 12.4 Transepithelial transport 141 12.2 Gas exchange in air 12.4 Transepitation in changing salinities 185 13.1 Transport in respiratory systems 13.1 Transport of oxygen and carbon dioxide 5.1 Water loss from animals living in freshwater habitats 170 13 Transport of oxygen and carbon dioxide 5.1 Water loss from animals living on land 195 13.2 Transport of oxygen and carbon dioxide 5.1 Water loss from animals living on land 195 13.2 Transport of oxygen and carbon dioxide 5.1 Water loss from animals living on land 195 13.2 Transport of oxygen and carbon dioxide 5.1 Water loss from animals living on land 195 13.2 Transport of oxygen and carbon dioxide 5.1 Water loss from animals living on land 195 13.2 Transport of oxygen and carbon dioxide 5.2 Animals living on the primary urine 243 14.1 General characteristics of circulatory systems 5.3	natu	ural environments	4	8.1 The effect of temperature on chemical reaction	s 304
what conditions do animals live? 1.3 How animal groups are related to each other 1.4 Animal diversity 1.5 Environmental change and animal diversity 3.6 9 Temperature regulation in ectotherms 3.7 3.1 What is energy? 4.5 Energy metabolism; generating energy from food 4.5 9.1 Thermal relations of ectotherms with their environments 4.6 2.2 Metabolism, energy metabolism and metabolic rates 4.7 Energy intake from food 4.8 9.2 Surviving cold or subzero conditions 4.9 Surviving cold or subzero conditions 4.0 Surviving cold or subzero conditions 4.0 Surviving cold or subzero conditions 4.1 Intermediary metabolism involved in extracting energy from foodstuff 4.1 Intermediary metabolism involved in extracting energy from foodstuff 4.1 Intermediary metabolism involved in extracting energy from foodstuff 4.2 General properties of animal cells 4.3 General properties of animal cells 4.4 Intermediary metabolism and metabolic rates 4.5 Energy intake from food 4.6 Ells and organisms, and their interactions with 4.1 Animal body fluids 4.1 Animal body fluids 4.2 Transepithelial transport 4.3 Interactions of animals with their environments 4.4 Body fluid regulation: principles and processes 4.1 Animal body fluids 4.2 Transepithelial transport 4.3 Regulation of cell volume 4.4 Regulation in equalition in aquatic animals 4.4 Regulation of cell volume 4.5 Animals living in freshwater habitats 5.1 Marine animals 5.2 Animals living in freshwater habitats 5.3 Osmoregulation in changing salinities 6 Water balance of land animals 7 Interpolation of the primary urine 7 Kidneys and excretion 7 Production of the primary urine 7 Kidneys and excretion 7 Production of the primary urine 7 Kidneys and excretion 7 Water loss from animals living on land 7 Kidneys and excretion 7 Water loss from animals living on land 8 Cardlovascular systems 8 Cardlovascular systems 9 Cardlovascular systems 9 Cardlovascular systems 9 Cardl	1.1	What is environmental animal physiology?	5	8.2 The effect of temperature on biological process	es 307
1.3 How animal groups are related to each other 1.4 Animal diversity 2.5 Environmental change and animal diversity 2.6 Energy metabolism: generating energy from food 2.1 What is energy? 3.2 Metabolism, energy metabolism and metabolic rates 3.2 Energy intake from food 2.3 Energy intake from food 2.4 Intermediary metabolism involved in extracting energy from foodstuff 3.1 Physical principles govern the flow of heat and the movement of ions and molecules in animals 3.2 General properties of animal cells 3.3 Interactions of animals with their environments 4.4 Body fluid regulation: principles and processes 4.5 Animal body fluids 4.6 Part 2 Water and salts 4.7 Transepithelial transport 4.8 Regulation of cell volume 4.9 Cosmotic and ionic regulation in aquatic animals 4.1 Animal body fluids 4.2 Transepithelial transport 4.3 Regulation of cell volume 4.4 Naminal flowersity 4.5 Cosmotic and ionic regulation in aquatic animals 4.6 Water balance of land animals 4.7 Water loss from animals living on land 4.8 Balancing water loss 4.9 How do we describe different thermoregulatory strategies? 4.9 Temperature regulation in ectotherms 4.5 Hemmoregulatory strategies? 4.7 Show do we describe different the thermoregulatory strategies? 4.8 Lemperature repulation in ectotherms 4.9 Lemperature repulation in ectotherms with their environments 4.9 Lemperature regulation in ectotherms with their environments 4.0 Lemperature regulation in ectotherms with their environments 4.0 Lemperature regulation in ectotherms 4.1 The respiratory gases and insects 4.1 The respiratory gases, gas exchange and transport 4.2 Respiratory systems 4.3 Regulation of cell volume 4.4 Respiratory systems 4.5 Lemperature regulate their body temperature 4.6 Water balance of land animals 4.7 Transport in respiratory systems 4.8 Part 4 Oxygen 4.9 Transport in respiratory systems 4.9 Lemperature regulation in ectotherms 4.1 Transport in respiratory gases archange and transport 4.2 Transept in a respiratory gase and a respiratory systems 5.1 Marine animals 6 Water ba	1.2	Natural environments: where and under		8.3 Environmental temperature variation	313
