Preface	vii
1 Probability Review	1
1.1 Basic Concepts	1
1.1.1 Events, Random Variables and Probability	1
1.1.2 Independence and Conditional Probability	8
1.1.3 Expectation	15
1.1.4 Conditional Expectation	33
1.2 Transforms of Probability Distributions	37
1.2.1 Generating Functions	37
1.2.2 Characteristic Functions	42
1.3 Transformations of Random Vectors	45
1.3.1 Smooth Change of Variables	45
1.3.2 Order Statistics	47
1.4 Almost-Sure Convergence	48
1.4.1 Two Basic Tools	48
1.4.2 The Strong Law of Large Numbers	52
1.5 Exercises	58
2 Discrete-Time Markov Chains	63
2.1 The Transition Matrix	63
2.1.1 The Markov Property	63
2.1.2 The Distribution of an HMC	65
2.2 Markov Recurrences	67
2.2.1 A Canonical Representation	67
2.2.2 First-Step Analysis	73
2.3 Topology of the Transition Matrix	80
2.3.1 Communication	80
2.3.2 Period	81
2.4 Steady State	85
2.4.1 Stationarity	85

2.4.2	Time Reversal	91
2.5	Regeneration	96
2.5.1	The Strong Markov Property	96
2.5.2	Regenerative Cycles	99
2.6	Exercises	102
3	Recurrence and Ergodicity	111
3.1	The Potential Matrix Criterion	111
3.1.1	Recurrent and Transient States	111
3.1.2	A Criterion of Recurrence	113
3.1.3	Structure of the Transition Matrix	116
3.2	Recurrence	117
3.2.1	Invariant Measures	117
3.2.2	A Positive Recurrence Criterion	120
3.3	Empirical Averages	128
3.3.1	The Ergodic Theorem	128
3.3.2	The Renewal Reward Theorem	135
3.4	Exercises	138
4	Long-Run Behavior	145
4.1	Coupling	145
4.1.1	Convergence in Variation	145
4.1.2	The Coupling Method	149
4.2	Convergence to Steady State	150
4.2.1	The Positive Recurrent Case	150
4.2.2	The Null Recurrent Case	152
4.3	Convergence Rates, a First Look	157
4.3.1	Convergence Rates via Coupling	157
4.3.2	The Perron–Frobenius Theorem	158
4.3.3	Quasi-stationary Distributions	162
4.3.4	Dobrushin’s Ergodic Coefficient	163
4.4	Exercises	166
5	Discrete-Time Renewal Theory	171
5.1	The Renewal Process	171
5.1.1	The Renewal Equation	171
5.1.2	The Renewal Theorem	175
5.1.3	Defective Renewal Sequences	177
5.2	Regenerative Processes	180
5.2.1	Renewal Equations for Regenerative Processes	180
5.2.2	The Regenerative Theorem	182

5.3	Exercises	185
6	Absorption and Passage Times	187
6.1	Life Before Absorption	187
6.1.1	Infinite Sojourns	187
6.1.2	Time to Absorption	192
6.2	Absorption Probabilities	193
6.2.1	The First Fundamental Matrix	193
6.2.2	The Absorption Matrix	196
6.2.3	Hitting Times Formula	202
6.3	The Second Fundamental Matrix	204
6.3.1	Definition	204
6.3.2	The Mutual Time-Distance Matrix	208
6.3.3	Variance of Ergodic Estimates	211
6.4	The Branching Process	214
6.4.1	The Galton–Watson Model	214
6.4.2	Tail Distributions	218
6.4.3	Conditioning by Extinction	221
6.5	Exercises	223
7	Lyapunov Functions and Martingales	227
7.1	Lyapunov Functions	227
7.1.1	Foster’s Theorem	227
7.1.2	Queueing Applications	231
7.2	Martingales and Potentials	237
7.2.1	Harmonic Functions and Martingales	237
7.2.2	The Maximum Principle	239
7.3	Martingales and HMCs	244
7.3.1	The Two Pillars of Martingale Theory	244
7.3.2	Transience and Recurrence via Martingales	246
7.3.3	Absorption via Martingales	249
7.4	Exercises	252
8	Random Walks on Graphs	255
8.1	Pure Random Walks	255
8.1.1	The Symmetric Random Walks on $\mathbb{Z}$ and $\mathbb{Z}^3$	255
8.1.2	The Pure Random Walk on a Graph	259
8.1.3	Spanning Trees and Cover Times	260
8.2	Symmetric Walks on a Graph	265
8.2.1	Reversible Chains as Symmetric Walks	265
8.2.2	The Electrical Network Analogy	268

8.3	Effective Resistance and Escape Probability	273
8.3.1	Computation of the Effective Resistance	273
8.3.2	Thompson's and Rayleigh's Principles	277
8.3.3	Infinite Networks	280
8.4	Exercises	283
9	Convergence Rates	289
9.1	Reversible Transition Matrices	289
9.1.1	A Characterization of Reversibility	289
9.1.2	Convergence Rates in Terms of the SLEM	292
9.1.3	Rayleigh's Spectral Theorem	297
9.2	Bounds for the SLEM	299
9.2.1	Bounds via Rayleigh's Characterization	299
9.2.2	Strong Stationary Times	308
9.2.3	Reversibilization	313
9.3	Mixing Times	315
9.3.1	Basic Definitions	315
9.3.2	Upper Bounds via Coupling	317
9.3.3	Lower Bounds	319
9.4	Exercises	323
10	Markov Fields on Graphs	331
10.1	The Gibbs–Markov Equivalence	331
10.1.1	Local Characteristics	331
10.1.2	Gibbs Distributions	334
10.2	Specific Models	343
10.2.1	Random Points	343
10.2.2	The Auto-binomial Texture Model	345
10.2.3	The Pixel-Edge Model	348
10.2.4	Markov Fields in Image Processing	351
10.3	Phase Transition in the Ising Model	356
10.3.1	Experimental Results	356
10.3.2	The Peierls Argument	359
10.4	Exercises	362
11	Monte Carlo Markov Chains	369
11.1	General Principles of Simulation	369
11.1.1	Simulation via the Law of Large Numbers	369
11.1.2	Two Methods for Sampling a PDF	370
11.2	Monte Carlo Markov Chain Sampling	373
11.2.1	The Basic Idea	373

11.2.2	Convergence Rates in MCMC	375
11.2.3	Variance of Monte Carlo Estimators	378
11.3	The Gibbs Sampler	386
11.3.1	Simulation of Random Fields	386
11.3.2	Convergence Rate of the Gibbs Sampler	388
11.4	Exact sampling	389
11.4.1	The Propp–Wilson algorithm	389
11.4.2	Sandwiching	393
11.5	Exercises	397
12	Non-homogeneous Markov Chains	399
12.1	Weak and Strong Ergodicity	399
12.1.1	Ergodicity of Non-Homogeneous Markov Chains	399
12.1.2	The Block Criterion of Weak Ergodicity	401
12.1.3	A Sufficient Condition for Strong Ergodicity	402
12.2	Simulated Annealing	408
12.2.1	Stochastic Descent and Cooling	408
12.2.2	Convergence of Simulated Annealing	416
12.3	Exercises	421
13	Continuous-Time Markov Chains	423
13.1	Poisson Processes	423
13.1.1	Point Processes	423
13.1.2	The Counting Process of an HPP	424
13.1.3	Competing Poisson Processes	427
13.2	Distribution of a Continuous-Time HMC	430
13.2.1	The Transition Semi-Group	430
13.2.2	The Infinitesimal Generator	434
13.2.3	Kolmogorov’s Differential Systems	440
13.3	The Regenerative Structure	447
13.3.1	The Strong Markov Property	447
13.3.2	Embedded Chain and Transition Times	450
13.3.3	Explosions	453
13.4	Recurrence and Long-Run Behavior	460
13.4.1	Stationary Distribution Criterion of Ergodicity	460
13.4.2	Ergodicity	467
13.4.3	Absorption	469
13.5	Continuous-Time HMCs from HPPs	470
13.5.1	The Strong Markov Property of HPPs	470
13.5.2	From Generator to Markov Chain	473
13.5.3	Poisson Calculus and Continuous-time HMCs	477

13.6 Exercises	486
14 Markovian Queueing Theory	491
14.1 Poisson Systems	491
14.1.1 The Purely Poissonian Description	491
14.1.2 Markovian Queues as Poisson Systems	494
14.2 Isolated Markovian Queues	500
14.2.1 As Birth-and-Death Processes	500
14.2.2 The M/GI/1/ ∞ /FIFO Queue	503
14.2.3 The GI/M/1/ ∞ /FIFO Queue	508
14.3 Markovian Queueing Networks	513
14.3.1 The Tandem Network	513
14.3.2 The Jackson Network	515
14.3.3 The Gordon–Newell Network	519
14.4 Exercises	522
A Appendix	527
A.1 Number Theory and Calculus	527
A.1.1 Greatest Common Divisor	527
A.1.2 Abel’s Theorem	528
A.1.3 Cesàro’s Lemma	529
A.1.4 Lebesgue’s Theorems for Series	530
A.1.5 Infinite Products	532
A.1.6 Tychonov’s Theorem	533
A.1.7 Subadditive Functions	533
A.2 Linear Algebra	534
A.2.1 Eigenvalues and Eigenvectors	534
A.2.2 Exponential of a Matrix	536
A.2.3 Gershgorin’s Bound	538
A.3 Probability and Expectation	539
A.3.1 Expectation Revisited	539
A.3.2 Lebesgue’s Theorem for Expectation	541
Bibliography	545
Index	553
