Series Editor's Introduction	vii
Acknowledgments	ix
Preface	xi
What's New in the Second Edition	xiii
Notation	xiii
Recommended Reading	xvi
Website	xviii
About the Author	xix
1. Matrices, Linear Algebra, and Vector Geometry: The Basics	1
1.1 Matrices	1
1.1.1 Introducing the Actors: Definitions	1
1.1.2 Simple Matrix Arithmetic	5
1.1.3 Matrix Inverses	11
1.1.4 Determinants	15
1.1.5 The Kronecker Product	16
1.2 Basic Vector Geometry	18
1.3 Vector Spaces and Subspaces	20
1.3.1 Orthogonality and Orthogonal Projections	25
1.4 Matrix Rank and the Solution of Linear Simultaneous Equations	31
1.4.1 Rank	31
1.4.2 Linear Simultaneous Equations	33
1.4.3 Generalized Inverses	38
2. Matrix Decompositions and Quadratic Forms	42
2.1 Eigenvalues and Eigenvectors	42
2.1.1 Generalized Eigenvalues and Eigenvectors	46
2.1.2 The Singular-Value Decomposition	46
2.2 Quadratic Forms and Positive-Definite Matrices	47
2.2.1 The Elliptical Geometry of Quadratic Forms	48
2.2.2 The Cholesky Decomposition	55
2.3 The QR Decomposition	56
2.3.1 Using the QR Decomposition to Compute Eigenvalues and Eigenvectors	60

3. An Introduction to Calculus	61
3.1 Review	61
3.1.1 Numbers	61
3.1.2 Lines and Planes	62
3.1.3 Polynomials	64
3.1.4 Logarithms and Exponentials	65
3.1.5 Basic Trigonometric Functions	67
3.2 Limits	69
3.2.1 The “Epsilon–Delta” Definition of a Limit	69
3.2.2 Finding a Limit: An Example	72
3.2.3 Rules for Manipulating Limits	72
3.3 The Derivative of a Function	73
3.3.1 The Derivative as the Limit of the Difference Quotient: An Example	75
3.3.2 Derivatives of Powers	76
3.3.3 Rules for Manipulating Derivatives	77
3.3.4 Derivatives of Logs and Exponentials	79
3.3.5 Derivatives of the Basic Trigonometric Functions	80
3.3.6 Second-Order and Higher-Order Derivatives	80
3.4 Optimization	81
3.4.1 Optimization: An Example	83
3.5 Multivariable and Matrix Differential Calculus	86
3.5.1 Partial Derivatives	86
3.5.2 Lagrange Multipliers for Constrained Optimization	88
3.5.3 Differential Calculus in Matrix Form	90
3.5.4 Numerical Optimization	93
3.6 Taylor Series	97
3.7 Essential Ideas of Integral Calculus	98
3.7.1 Areas: Definite Integrals	98
3.7.2 Indefinite Integrals	100
3.7.3 The Fundamental Theorem of Calculus	101
3.7.4 Multivariable Integral Calculus	104
4. Elementary Probability Theory	106
4.1 Probability Basics	106
4.1.1 Axioms of Probability	107
4.1.2 Relations Among Events, Conditional Probability, and Independence	108
4.1.3 Bonferroni Inequalities	110
4.2 Random Variables	111
4.2.1 Expectation and Variance	114

4.2.2	Joint and Conditional Probability Distributions	115
4.2.3	Independence, Dependence, and Covariance	117
4.2.4	Vector Random Variables	118
4.3	Transformations of Random Variables	119
4.3.1	Transformations of Vector Random Variables	120
5.	Common Probability Distributions	122
5.1	Some Discrete Probability Distributions	122
5.1.1	The Binomial and Bernoulli Distributions	122
5.1.2	The Multinomial Distributions	124
5.1.3	The Poisson Distributions	125
5.1.4	The Negative Binomial Distributions	126
5.2	Some Continuous Distributions	126
5.2.1	The Normal Distributions	127
5.2.2	The Chi-Square (χ^2) Distributions	128
5.2.3	Student's t -Distributions	130
5.2.4	The F -Distributions	132
5.2.5	The Multivariate-Normal Distributions	132
5.2.6	The Exponential Distributions	137
5.2.7	The Inverse-Gaussian Distributions	137
5.2.8	The Gamma Distributions	138
5.2.9	The Beta Distributions	139
5.2.10	The Wishart Distributions	141
5.3	Exponential Families of Distributions	142
5.3.1	The Binomial Family	144
5.3.2	The Normal Family	144
5.3.3	The Multinomial Family	144
6.	An Introduction to Statistical Theory	145
6.1	Asymptotic Distribution Theory	145
6.1.1	Probability Limits	145
6.1.2	Asymptotic Expectation and Variance	147
6.1.3	Asymptotic Distribution	149
6.1.4	Vector and Matrix Random Variables	149
6.2	Properties of Estimators	151
6.2.1	Bias and Unbias	151
6.2.2	Mean-Squared Error and Efficiency	151
6.2.3	Consistency	153
6.2.4	Sufficiency	154
6.2.5	Robustness	154
6.3	Maximum-Likelihood Estimation	163
6.3.1	Preliminary Example	164

6.3.2	Properties of Maximum-Likelihood Estimators	167
6.3.3	Wald, Likelihood-Ratio, and Score Tests	169
6.3.4	Several Parameters	173
6.3.5	The Delta Method	176
6.4	Introduction to Bayesian Inference	178
6.4.1	Bayes's Theorem	178
6.4.2	Extending Bayes's Theorem	181
6.4.3	An Example of Bayesian Inference	183
6.4.4	Bayesian Interval Estimates	185
6.4.5	Bayesian Inference for Several Parameters	186
6.4.6	Markov-Chain Monte Carlo	186
7.	Putting the Math to Work: Linear Least-Squares Regression	198
7.1	Least-Squares Fit	198
7.1.1	Computing the Least-Squares Solution by the QR and SVD Decompositions	201
7.2	A Statistical Model for Linear Regression	203
7.3	The Least-Squares Coefficients as Estimators	204
7.4	Statistical Inference for the Regression Model	205
7.5	Maximum-Likelihood Estimation of the Regression Model	208
7.6	Random X s	209
7.7	The Elliptical Geometry of Linear Least-Squares Regression	212
7.7.1	Simple Regression	212
7.7.2	Multiple Regression	213
