

# CONTENTS

## Preface

<b>1.</b>	<b>Introduction (K. J.)</b> . . . . .	<b>11</b>
1.1.	Important events in the history of membranology . . . . .	12
1.2.	Evolution and transport . . . . .	14
1.3.	Transport in space and time . . . . .	16
<b>2.</b>	<b>Membranes (A. K.)</b> . . . . .	<b>21</b>
2.1.	Surfaces and interfaces . . . . .	22
2.2.	Chemical composition . . . . .	36
2.2.1.	Lipids . . . . .	36
2.2.1.1.	Chemistry . . . . .	36
2.2.1.2.	Distribution . . . . .	45
2.2.1.3.	Fatty acids . . . . .	49
2.2.1.4.	Solubilization . . . . .	51
2.2.2.	Proteins . . . . .	53
2.2.2.1.	Types and occurrence . . . . .	53
2.2.2.2.	Solubilization . . . . .	57
2.2.3.	Carbohydrates . . . . .	60
2.3.	Structure of membranes . . . . .	61
2.3.1.	Physico-chemical techniques . . . . .	61
2.3.1.1.	X-ray diffraction . . . . .	61
2.3.1.2.	Infrared spectroscopy . . . . .	63
2.3.1.3.	Ultraviolet spectroscopy . . . . .	64
2.3.1.3.1.	Absorption spectra . . . . .	65
2.3.1.3.2.	Optical rotatory dispersion . . . . .	66

2.3.1.3.3.	Circular dichroism . . . . .	67
2.3.1.4.	Nuclear magnetic resonance . . . . .	70
2.3.1.5.	Electron spin resonance . . . . .	75
2.3.1.6.	Fluorescence . . . . .	79
2.3.1.7.	Calorimetry and related techniques . . . . .	82
2.3.1.8.	Other techniques . . . . .	85
2.3.2.	Organization of lipids . . . . .	86
2.3.2.1.	Biological membranes . . . . .	86
2.3.2.2.	Artificial membranes . . . . .	95
2.3.3.	Organization of proteins . . . . .	99
2.3.4.	Lipid – protein interactions and membrane structure.	101
2.4.	Assembly of membranes . . . . .	107
2.5.	Electron microscopy . . . . .	117
2.6.	Isolation of membranes . . . . .	119
2.7.	Morphology and function of different biological membranes . . . . .	126
2.7.1.	Plasma membrane . . . . .	126
2.7.1.1.	Morphology . . . . .	126
2.7.1.2.	Functional properties . . . . .	130
2.7.1.2.1.	Antigenicity . . . . .	130
2.7.1.2.2.	Enzyme content . . . . .	132
2.7.1.2.3.	Cell walls . . . . .	133
2.7.1.2.4.	Binding and receptor properties . . . . .	145
2.7.2.	Mitochondrion . . . . .	147
2.7.3.	Chloroplast . . . . .	152
2.7.4.	Mesosome . . . . .	156
2.7.5.	Endoplasmic reticulum . . . . .	156
2.7.6.	Golgi apparatus . . . . .	158
2.7.7.	Lysosome . . . . .	161
2.7.8.	Tonoplast . . . . .	163
2.7.9.	Nucleus . . . . .	163
2.7.10.	Other membranes . . . . .	165
Synopsis	. . . . .	165
<b>3.</b>	<b>Thermodynamics of transport (K. J.) . . . . .</b>	<b>169</b>
3.1.	Thermodynamic equilibrium, passive and active transport processes . . . . .	169
3.2.	Thermodynamics of the steady state . . . . .	172
3.3.	Network thermodynamics . . . . .	177
Synopsis	. . . . .	181

<b>4.</b>	<b>Transport of nonelectrolytes (A. K.)</b>	183
4.1.	Principles of diffusion (K. J.)	184
4.2.	Diffusion across membranes (A. K. + K. J.)	192
4.3.	Kinetics of mediated transport	207
4.3.1.	Mediated or facilitated diffusion	207
4.3.1.1.	Steady-state approach	208
4.3.1.2.	Equilibrium approach	211
4.3.1.3.	Two-site carrier	220
4.3.2.	Primary active transport	222
4.3.2.1.	Kinetics	222
4.3.2.2.	Combined systems	226
4.3.2.3.	Energetics	228
4.3.3.	Coupled transport	229
4.4.	Chemical nature of nonelectrolyte transport systems	233
4.4.1.	Group-translocation systems	233
4.4.2.	Oxidoreductive systems	235
4.4.3.	Binding proteins	238
4.5.	Distribution and role of nonelectrolyte transport	239
	Synopsis	240
<b>5.</b>	<b>Transport of ions (K. J.)</b>	243
5.1.	Equilibria of ions	243
5.1.1.	A simple membrane equilibrium and membrane potentials	243
5.1.2.	Gibbs-Donnan equilibrium	247
5.1.3.	Diffuse electrical double layer	250
5.2.	Electrodifusion and membrane potentials	256
5.2.1.	Introduction	256
5.2.2.	The electrodiffusion equation—general considerations	259
5.2.3.	Schlögl's (1964) derivation of the general differential equation of electrodiffusion	262
5.2.4.	Henderson's equation—potential difference across a continuous layer with constant concentration gradients of individual ions	269
5.2.5.	Planck's procedure—potential difference across a microscopically electroneutral continuous layer	271
5.2.6.	Goldman's procedure—potential difference across a continuous layer with constant field	279
5.2.7.	Constant-field equation for potential difference across the whole membrane	282

5.2.8.	Constant-field equation for steady-state membrane potential in the presence of an electrogenic sodium pump . . . . .	284
5.2.9.	The Hodgkin-Horowicz equation . . . . .	286
5.3.	Chemical nature of ion-translocating systems (A. K.)	288
5.3.1.	Na,K-Adenosinetriphosphatase . . . . .	288
5.3.2.	Ca-Adenosinetriphosphatase . . . . .	293
5.3.3.	Other adenosinetriphosphatases . . . . .	294
5.3.4.	Ion-binding proteins . . . . .	294
5.3.5.	Transport of ferric ions . . . . .	295
5.3.6.	Ionophores . . . . .	296
5.4	Distribution and role of ion transport . . . . .	301
Synopsis	. . . . .	304
<b>6.</b>	<b>Transport of water (K. J.) . . . . .</b>	<b>307</b>
6.1.	Steady-state thermodynamics of water permeation .	307
6.2.	The state of water in cells . . . . .	314
Synopsis	. . . . .	316
<b>7.</b>	<b>Transport by special mechanisms (A. K.) . . . . .</b>	<b>317</b>
7.1.	Oligopeptide permeases . . . . .	317
7.2.	Pinocytosis . . . . .	318
7.3.	Uptake of nucleic acids and special proteins . . . .	320
Synopsis	. . . . .	323
References	. . . . .	325
Subject index	. . . . .	339
