This series reports new developments in mathematical research and teaching – quickly, informally and at a high level. The type of material considered for publication includes:

1. Preliminary drafts of original papers and monographs
2. Lectures on a new field or presentations of a new angle in a classical field
3. Seminar work-outs
4. Reports of meetings, provided they are
   a) of exceptional interest and
   b) devoted to a single topic.

Texts which are out of print but still in demand may also be considered if they fall within these categories.

The timeliness of a manuscript is more important than its form, which may be unfinished or tentative. Thus, in some instances, proofs may be merely outlined and results presented which have been or will later be published elsewhere. If possible, a subject index should be included. Publication of Lecture Notes is intended as a service to the international mathematical community, in that a commercial publisher, Springer-Verlag, can offer a wide distribution of documents which would otherwise have a restricted readership. Once published and copyrighted, they can be documented in the scientific literature.

Manuscripts

Manuscripts should be no less than 100 and preferably no more than 500 pages in length.
They are reproduced by a photographic process and therefore must be typed with extreme care. Symbols not on the typewriter should be inserted by hand in indelible black ink. Corrections to the typescript should be made by pasting in the new text or painting out errors with white correction fluid. Authors receive 75 free copies and are free to use the material in other publications. The typescript is reduced slightly in size during reproduction; best results will not be obtained unless the text on any one page is kept within the overall limit of 18 x 26.5 cm (7 x 10½ inches). On request, the publisher will supply special paper with the typing area outlined.

Manuscripts should be sent to Prof. A. Dold, Mathematisches Institut der Universität Heidelberg, Im Neuenheimer Feld 288, 6900 Heidelberg/Germany, Prof. B. Eckmann, Eidgenössische Technische Hochschule, CH-8092 Zürich/Switzerland, or directly to Springer-Verlag Heidelberg.

Springer-Verlag, Heidelberger Platz 3, D-1000 Berlin 33
Springer-Verlag, Neuenheimer Landstraße 28–30, D-6900 Heidelberg 1

ISBN 0-387.10285-X

List of participants

List of 1-hour-lectures and short lectures

K. LEICHTWEISS
E.B. Christoffels Einfluss auf die Geometrie 1

S. ALEXANDER
Distance geometry in Riemannian manifolds-with-boundary 12

D. BARTHEL, R. KUEMRITZ
Laplacian with a potential 19

L. BERARD BERGERY, J.P. BOURGUIGNON
Laplacian and Riemannian submersions with totally geodesic fibres 30

R. BOEHME
A Plateau problem with many solutions for boundary curves in a given knot class 36

J.P. BOURGUIGNON
Ricci curvature and Einstein metrics 42

U. BREHM, W. KUEHNEL
Smooth approximation of polyhedral surfaces with respect to curvature measures 64

J. BRUENING
Invariant eigenfunctions of the Laplacian and their asymptotic distribution 69

P. BUSER, H. KARCHER
The Bieberbach case in Gromov's almost flat manifold theorem 82

T. CECIL, P. RYAN
Tight spherical embeddings 94

B.Y. CHEN, L. VERSTRAELEN
Characterizations of space forms by hypersurfaces 105

J. CZYŻ
On graded bundles and their geometry 110

A. DERDZIŃSKI
Compact Riemannian manifolds with harmonic curvature and non-parallel Ricci tensor 126

M.P. DO CARMO
Stability of minimal submanifolds 129

A. GRAY
A generalization of Weyl's tube formula 140

S. HELGASON
The X-ray transform on a symmetric space 145

H.-CH. IM HOF
Visibility, horocycles, and the Bruhat decomposition 149

S. KOBAYASHI
On holomorphic connections 154

I. KOLÁŘ
Fiber parallelism and connections 165

O. KOWALSKI
Riemannian manifolds the geodesic balls of which are near to the Euclidean balls by volume 174

R. LANGEVIN
Tight foliations 181

L. LEMAIRE
Minima and critical points of the energy in dimension two 187

K.H. MAYER
S^1-actions on almost complex manifolds 194

J.D. MOORE
On conformal immersions of space forms 203

V. OLIKER
Some remarks on elliptic equations and infinitesimal deformations of submanifolds 211

Z. OLSZAK
The spectrum of the Laplacian and the curvature of Sasakian manifolds 221

T. SUNADA
Geodesic chains and the spherical mean operator 229

G. TSAGAS
The spectrum of the Laplace operator for a special complex manifold 233

J.C. WOOD
On the holomorphicity of harmonic maps from a surface 239

I. BIVENS, J.P. BOURGUIGNON, A. DERDZIŃKSI, D. FERUS, O. KOWALSKI, T. KLOTZ MILNOR, V. OLIKER, U. SIMON, W. STRUEBING, K. VOSS
Discussion on Codazzi-tensors 243 299
