|--|-----------|
| <i>Contributors</i> | <i>xi</i> |
| <i>Preface</i> | <i>xv</i> |
| 1. From affective to cognitive processing: Functional organization of the medial frontal cortex | 1 |
| Joseph Simon IV, Peter H. Rudebeck, and Erin L. Rich | |
| 1. Introduction | 2 |
| 2. Anatomical organization | 3 |
| 3. Organization of function | 6 |
| 4. Disorders of function | 14 |
| 5. Summary | 20 |
| Acknowledgments | 20 |
| References | 21 |
| 2. Medial prefrontal cortex encoding of stress and anxiety | 29 |
| David S. Jacobs and Bitá Moghaddam | |
| 1. Introduction | 30 |
| 2. Brief review of rodent medial prefrontal cortex subdivisions | 30 |
| 3. Stress and medial prefrontal cortex function | 31 |
| 4. The medial prefrontal cortex encoding of fear states and fear learning | 35 |
| 5. Medial prefrontal cortex encoding of anxiety | 37 |
| 6. Medial prefrontal cortex manipulation of goal-directed action under anxiety states | 41 |
| 7. Conclusion | 48 |
| Acknowledgments | 48 |
| References | 48 |
| 3. Integration of value and action in medial prefrontal neural systems | 57 |
| Beata Kaminska, Jessica P. Caballero, and David E. Moorman | |
| 1. Rodent medial prefrontal cortex | 58 |
| 2. Medial prefrontal neuronal representations of value and motivation | 59 |
| 3. Negative value: Punishment, fear, and aversion | 59 |
| 4. Positive value: Reward and approach | 62 |
| 5. Drugs of abuse | 64 |

| | |
|--|------------|
| 6. Comparisons of positive and negative value | 65 |
| 7. Integration of value and action | 68 |
| 8. Summary and conclusions: Value, actions, both, or neither? | 70 |
| References | 74 |
| 4. Dynamic decision making and value computations in medial frontal cortex | 83 |
| Bilal A. Bari and Jeremiah Y. Cohen | |
| 1. Introduction | 84 |
| 2. Value-based decision making | 85 |
| 3. Matching behavior | 87 |
| 4. Algorithms underlying matching behavior | 95 |
| 5. Movement vigor during flexible decision making | 98 |
| 6. Brain structures underlying flexible behavior | 99 |
| 7. Future directions | 106 |
| References | 106 |
| 5. Reward signaling by the rodent medial frontal cortex | 115 |
| Mark Laubach, Linda M. Amarante, Marcelo S. Caetano, and Nicole K. Horst | |
| 1. What is the rodent medial frontal cortex? | 116 |
| 2. Dorsolateral prefrontal cortex, working memory, and persistent neural activity | 116 |
| 3. Medial frontal cortex, performance monitoring, and persistent neural activity | 118 |
| 4. From working memory to reward processing | 120 |
| 5. Theta range activity is synchronized to reward consumption | 121 |
| 6. Theta range activity tracks the value of consummatory actions | 122 |
| 7. Anatomical basis for the rostral-caudal gradient of reward signaling | 124 |
| 8. Summary and conclusions | 127 |
| Acknowledgments | 127 |
| Conflict of interest | 127 |
| Financial support | 128 |
| References | 128 |
| 6. The anterior cingulate cortex and event-based modulation of autonomic states | 135 |
| Jeremy K. Seamans | |
| 1. Homology of the ACC from rat to human | 136 |
| 2. Popular theories of ACC function | 138 |
| 3. Anterior cingulotomies | 139 |

| | |
|--|----------------|
| 4. Why are anterior cingulotomies clinically efficacious? | 141 |
| 5. Properties of single ACC neurons: Flexibility, multi-responsivity and contextualization | 144 |
| 6. Neuromodulation of the ACC: Lessons from the dopamine system | 153 |
| 7. A model for event-specific control of autonomic states | 155 |
| 8. The modulation of attractor dynamics in psychiatric conditions | 156 |
| References | 158 |
| 7. Valence processing in the PFC: Reconciling circuit-level and systems-level views | 171 |
| Austin A. Coley, Nancy Padilla-Coreano, Reesha Patel, and Kay M. Tye | |
| 1. Introduction | 172 |
| 2. The mPFC encodes context-specific valence processing | 174 |
| 3. mPFC circuits and dynamics flexibly modulate social behaviors | 182 |
| 4. The mPFC is involved in addictive and compulsive behavior | 187 |
| 5. The mPFC as a major component in reward processing | 195 |
| 6. Summary | 200 |
| Acknowledgments | 201 |
| Competing interest | 201 |
| Author contributions | 201 |
| References | 201 |
| 8. Social processing by the primate medial frontal cortex | 213 |
| Philip T. Putnam and Steve W.C. Chang | |
| 1. Introduction | 214 |
| 2. Key algorithms in social interactions | 216 |
| 3. Evidence from behavioral neurophysiology during social interactions | 221 |
| 4. Attributes of the MFC for social processing | 230 |
| 5. Social specificity of the MFC: Algorithms and implementations | 237 |
| 6. Conclusions | 239 |
| Acknowledgment | 240 |
| References | 240 |
| 9. Potential roles of the rodent medial prefrontal cortex in conflict resolution between multiple decision-making systems | 249 |
| Amber E. McLaughlin, Geoffrey W. Diehl, and A. David Redish | |
| 1. Multiple decision-making systems interact to inform action-selection | 250 |
| 2. Computation and neurobiology of decision systems | 250 |
| 3. Prefrontal cortex and decision systems | 253 |

| | |
|---|------------|
| 4. Theories for decision system integration | 258 |
| 5. Prefrontal cortex and combining decision systems | 265 |
| 6. Conclusions | 271 |
| References | 272 |
| 10. Anterior cingulate cortex and adaptive control of brain and behavior | 283 |
| Adam T. Brockett and Matthew R. Roesch | |
| 1. Introduction | 284 |
| 2. The evolution of the conflict monitoring hypothesis | 285 |
| 3. What does ACC signal? Insights from behavioral neurophysiology | 291 |
| 4. Conclusion | 303 |
| Conflict of interest | 303 |
| Acknowledgments | 303 |
| References | 304 |
| 11. Oscillations as a window into neuronal mechanisms underlying dorsal anterior cingulate cortex function | 311 |
| Benjamin Voloh, Rachel Knoebl, Benjamin Y. Hayden, and Jan Zimmermann | |
| 1. Introduction | 312 |
| 2. Insights from single unit studies: dACC as an economic structure | 313 |
| 3. Oscillations as a window into circuit interactions | 316 |
| 4. Computational principles of oscillatory coordination | 321 |
| 5. Oscillations in dACC as a link between the micro and macro | 327 |
| 6. Conclusion | 328 |
| References | 329 |
| 12. Neuronal oscillations and the mouse prefrontal cortex | 337 |
| Felix Jung and Marie Carlén | |
| 1. Introduction | 337 |
| 2. The origins of neuronal oscillations | 339 |
| 3. Gamma oscillations in the prefrontal cortex | 341 |
| 4. Neuronal oscillations in the prefrontal-hippocampal system | 346 |
| 5. Respiration-entrained rhythms and the prefrontal cortex | 351 |
| 6. Cross-region synchronization by neuronal oscillations during fear behavior | 354 |
| 7. Conclusion | 357 |
| Glossary | 358 |
| References | 358 |

| | |
|---|------------|
| 13. Prefrontal contributions to action control in rodents | 373 |
| Stefanie Hardung, Zoe Jäckel, and Ilka Diester | |
| 1. Introduction | 374 |
| 2. Contributions of PFC subsections to response inhibition | 382 |
| 3. Anatomical connections of the mPFC to motor output structures | 387 |
| 4. Conclusion | 388 |
| References | 388 |
| 14. The midcingulate cortex and temporal integration | 395 |
| Emmanuel Procyk, Vincent Fontanier, Matthieu Sarazin, Bruno Delord, Clément Goussi, and Charles R.E. Wilson | |
| 1. On time and behavior | 396 |
| 2. The neurobiological source of temporal integration in MCC | 398 |
| 3. Neurophysiological and causal correlates of temporal integration in MCC | 404 |
| 4. Conclusion | 411 |
| References | 413 |
| 15. Medial prefrontal cortex and the temporal control of action | 421 |
| Qiang Zhang, Matthew A. Weber, and Nandakumar S. Narayanan | |
| 1. Deciding <i>when</i> to act | 421 |
| 2. Paradigms for studying the temporal control of action | 423 |
| 3. Neurotransmitter systems | 425 |
| 4. Significance for human disease | 426 |
| 5. Lesion studies | 428 |
| 6. Neuronal correlates | 430 |
| 7. Stimulation | 433 |
| 8. Conclusion | 434 |
| References | 434 |
| 16. Secondary motor cortex: Broadcasting and biasing animal's decisions through long-range circuits | 443 |
| Jen-Hau Yang and Alex C. Kwan | |
| 1. Introduction | 444 |
| 2. Organization of long-range circuits | 446 |
| 3. Circuits for perceptual behavior | 448 |
| 4. Circuits for adaptive movements | 452 |
| 5. Circuits for decision-making | 455 |
| 6. Other projections | 460 |

| | |
|--|-----|
| 7. Relevance for mental disorders | 460 |
| 8. Conclusion: Many circuits, many functions | 462 |
| Acknowledgments | 464 |
| References | 464 |
