Preface	xv

1. Derivatization of carbohydrates for analysis by liquid chromatography and capillary electrophoresis

Raymond B. Yu, Neil A.V. Dalman, Alain Wuethrich, and Joselito P. Quirino

1 Introduction	2
2 General considerations for carbohydrate derivatization	4
3 Carbohydrate derivatization for detection in HPLC	5
4 Carbohydrate derivatization for detection in CE	24
5 Conclusion and future prospects	28
References	29

2. Reversed-phase and hydrophobic interaction chromatography of carbohydrates and glycoconjugates

Ziad El Rassi

1 Introduction	36
2 Basic theoretical concepts—An overview	37
3 Chromatographic systems, methodologies, and applications	41
4 Conclusions	106
Acknowledgment	106
References	106

3. HPLC of carbohydrates with cation-exchange silica and resin-based stationary phases

Matthias Rainer, Christian W. Huck, Christian G. Huber, and Günther K. Bonn

1 Introduction	126
2 Separation of carbohydrates on cation-exchange stationary phases	126
3 Applications	143
References	149

4. High-performance anion-exchange chromatography with pulsed amperometric detection for carbohydrate and glycoconjugate analyses

Jeffrey S. Rohrer

1 Introduction	158
2 HPAEC-PAD in 2020	159

3 HPAEC-PAD basics	160
4 HPAEC columns	162
5 Developments in pulsed amperometric detection	167
6 Updated and new HPAEC-PAD applications	169
7 Conclusion	195
Acknowledgments	195
References	196

5. Hydrophilic interaction liquid chromatography-mass spectrometry for the characterization of glycoproteins at the glycan, peptide, subunit, and intact level

Andrea F. G. Gargano, Rob Haselberg, and Govert W. Somsen

1 Introduction	210
2 Protein glycosylation	212
3 Glycoprofiling approaches	214
4 HILIC-MS of glycoproteins: Conditions and practicalities	217
5 Applications of HILIC-MS for glycoprotein characterization	252
6 Conclusion	266
References	269

6. Frontal affinity chromatography: A unique approach for weak interaction analysis targeting lectins and oligosaccharides

Jun Hirabayashi and Kenichi Kasai

1 Introduction	280
2 FAC is an efficient analytical tool for weak interactions	282
3 Principle and theory	287
4 FAC performance under two distinct conditions	290
5 Reinforced FAC	291
6 Examples of lectin-oligosaccharides interaction analysis	295
7 Future remarks	302
References	304

7. Capillary electrophoresis and electrochromatography of carbohydrates

Ziad El Rassi

1 Introduction	313
2 Electrolyte systems	314
3 Detection systems	325
4 Separation approaches and selected applications	344
5 Capillary electrochromatography	377
6 Conclusions	380
Acknowledgments	381
References	381

8. LC-MS/MS in glycomics and glycoproteomics analyses

Mona Goli, Aiyong Yu, Byeong Gwan Cho, Sakshi Gautam, Junyao Wang,
Cristian D. Gutierrez-Reyes, Peilin Jiang, Wenjing Peng, and Yehia Mechref

1 Introduction	392
2 Current liquid phase techniques used for isomeric separation of glycans	395
3 Current techniques used for isomeric separation of glycopeptides	414
4 Software tools for glycomics and glycoproteomics	426
5 Concluding remarks	429
Acknowledgments	429
References	430

9. Capillary electrophoresis-mass spectrometry of carbohydrates and glycoconjugates

Claudimir Lucio do Lago, Daniela Daniel, Fernando Silva Lopes,
and Zuzana Cieslarova

1 Introduction	444
2 Interfacing capillary electrophoresis with mass spectrometry	445
3 Mono-, oligo-, and polysaccharides by CE-MS	453
4 Glycoconjugates	459
References	478

10. Modern techniques for separation, mass spectrometric detection, and characterization of glycolipids

Mirela Sarbu and Alina D. Zamfir

1 Introduction	486
2 Methods for extraction and purification	490
3 Liquid- and thin-layer chromatography in off- and on-line coupling to mass spectrometry	490
4 Capillary zone electrophoresis coupled to mass spectrometry	496
5 Ion mobility separation mass spectrometry	502
Acknowledgments	522
References	522

11. Liquid-phase separation methods hyphenated to electrospray ionization mass spectrometry for structural analysis of chondroitin/dermatan sulfate

Alina D. Zamfir, Raluca Ica, and Mirela Sarbu

1 The structure and biological functions of CS/DS	530
2 CS/DS extraction, depolymerization, and purification for the analysis by hyphenated ESI MS techniques	535
3 CS/DS profiling, fractionation, and mass analysis by combined SEC and ESI MS	537
4 LC MS of CS/DS	546

5 CS/DS analysis by CE ESI MS and tandem MS	549
6 Perspectives	558
Acknowledgments	559
References	559

12. CE/microchip electrophoresis of carbohydrates and glycoconjugates with electrochemical detection

Silvia Dorte, Tania Sierra, Agustín G. Crevillén, and Alberto Escarpa

1 Introduction	564
2 Electrochemical detection modes	566
3 Conclusions	589
References	590

13. CE and HPLC of carbohydrate species using contactless conductivity detection

Petr Tůma

1 Introduction	596
2 Conductivity detection	597
3 Contactless conductivity detection	602
4 Electrophoretic separation of carbohydrates in alkaline BGEs	610
5 CE and MCE coupled with C ⁴ D for determination of carbohydrate derivatives	618
6 Carbohydrate analysis in hyphenated CE/C ⁴ D instruments	622
7 Conclusions	624
Acknowledgment	625
References	625

14. Carbohydrate analysis by high-performance liquid chromatography (HPLC) with evaporative light-scattering detection (ELSD)

Xun Yan

1 Introduction	631
2 Evaporative light-scattering detection (ELSD)	632
3 Hydrophilic interaction liquid chromatography	635
4 Simple sugar and oligosaccharide analysis by HILIC	635
5 Polysaccharide with gel filtration chromatography (GFC)/ELSD	638
6 Hydrolysis of complex polysaccharides into simple carbohydrates	639
7 Conclusion	641
References	642

15. Capillary electrophoresis of glycoproteins

Angel Puerta, Laura Gomez-Ruiz, Jose C. Diez-Masa, and Mercedes de Frutos

1 Introduction	648
2 Capillary electrophoresis of isoforms of intact glycoproteins and glycopeptides	652

3 Applications	699
4 Near future: CE and COVID-19	709
Acknowledgments	710
References	710

16. Capillary electrophoresis analysis of intact and depolymerized complex heteropolysaccharides for quality assurance and purity

Veronica Mantovani, Federica Capitani, Francesca Maccari, Fabio Galeotti, and Nicola Volpi

1 Introduction	730
2 General considerations on CE analysis of GAGs	733
3 CE analysis of nonsulfated GAGs	736
4 CE analysis of sulfated GAGs	739
5 CE separations of monosaccharides derived from GAGs	743
6 CE for quality assurance and purity of complex GAGs	745
7 Conclusions	747
References	749

17. HPLC- and CE-based methods for the characterization of therapeutic glycoproteins

Claire I. Butré and Arnaud Delobel

1 Introduction	762
2 Analysis of glycoproteins at the intact and subunit levels	771
3 Analysis of proteins at the glycopeptides level	780
4 Analysis of glycoproteins at the glycan level	789
5 Analysis of glycoproteins at the monosaccharide level	801
References	805

18. Analysis of carbohydrates and glycoconjugates in food by CE and HPLC

Afroditi Chatzifragkou, Nadir Vrcic, and Oswaldo Hernandez-Hernandez

1 Introduction	816
2 Food categories according to the <i>Codex Alimentarius</i>	817
3 Analysis of carbohydrates by HPLC and CE per food category	818
4 Fruits and vegetables (including mushrooms and fungi) and seaweeds	820
5 Seaweeds	822
6 Cereals and cereal products derived from cereal grains, roots and tubers, pulses, and legumes	823
7 Sweeteners, including honey	826
8 Foodstuffs intended for particular nutritional uses	834
9 Prepared foods	837
10 Conclusions	838
Acknowledgments	838
References	838

19. Database search assisted N-glycan structure identification

Gabor Jarvas, Marton Szigeti, Matthew P. Campbell, and Andras Guttman

1 Introduction	844
2 Theory of glycan electromigration	844
3 Internal/bracketing standard approach	847
4 The virtual ladder approach	848
5 Analytical databases	850
6 N-Glycan sequencing	852
7 Conclusion	855
Acknowledgment	856
References	856
