

PART I NONSTOCHASTIC MACROECONOMICS

INTRODUCTION 1

Chapter I THE "CLASSICAL" MODEL 7

1. Firms 7
2. Assets Owned by Households 11
3. The Government 16
4. Households 17
5. Labor Supply 19
6. The Complete Model 19
7. Stability 29
8. The Model with $M + B \neq 0$ 32
9. The Model with $\pi = \dot{p}/p$ 34
10. An Alternative Definition of Disposable Income 41
11. Neutrality 45
12. Dichotomy 46
13. Conclusions 48
- References 48

Chapter II THE KEYNESIAN MODEL 50

1. General Analysis 50
2. Stability 58
3. Analysis of "Cost-Push" and "Demand-Pull" Inflation 61
4. The Model with $(M + B)\pi \neq 0$ 64
5. The Classical Model again 65

	6. A Digression on Wealth, Saving, and the Rate of Interest in the Classical Model	69
	7. Keynesian Economics and Walras's Law	71
	Exercises	74
	References	77
Chapter III	TOBIN'S DYNAMIC AGGREGATIVE MODEL	78
	1. The Firm's Optimization Problem	78
	2. Interpretation as a Special Two-Sector Model	87
	3. Investment and Saving	92
	Exercises	94
	References	95
Chapter IV	MISCELLANEOUS TOPICS	96
	1. The "Real Bills" Doctrine	96
	2. "Inside" and "Outside" Money	100
	3. Unions and Real Wages	104
	4. Lange's Critique of the Classical Dichotomy	107
	5. The Loanable Funds Equation	110
	6. In Defense of Keynesian Analyses that "Ignore" the Government's Budget Constraint	112
	References	116
Chapter V	DYNAMIC ANALYSIS OF A KEYNESIAN MODEL	117
	1. The Model with Adaptive Expectations	118
	2. Perfect Foresight ($\pi = Dp/p$)	125
	Exercises	130
	References	131
Chapter VI	THE INVESTMENT SCHEDULE	132
	1. The Cost-of-Change Model	132
	2. An Alternative Representation	138
	References	140

PART II INTRODUCTION TO STOCHASTIC MACROECONOMICS

Chapter VII	BEHAVIOR UNDER UNCERTAINTY	141
	1. The State Preference Model	141
	2. Liquidity Preference as Behavior toward Risk	150
	3. The Modigliani-Miller Theorem	157
	4. Effects of a Corporate Income Tax	162
	References	163

Chapter VIII	IMPLICIT LABOR CONTRACTS AND STICKY WAGES	165
	1. Introduction	165
	2. Emergence of State-Independent Wages	165
	3. Existence of Layoffs	170
	4. Incentives for "Unemployment Compensation"	172
	5. Conclusions	174
	Exercise	175
	References	175
Chapter IX	DIFFERENCE EQUATIONS AND LAG OPERATORS	176
	1. Lag Operators	176
	2. Second-Order Difference Equations	183
	3. Second-Order Difference Equations (Equal Roots)	191
	4. N th-Order Difference Equations (Distinct Roots)	192
	5. N th-Order Difference Equations (N Equal Roots)	194
	6. An Example of a First-Order System	195
	7. An Example of a Second-Order System	197
	8. An Optimization Example: Solving a System of Euler Equations	199
	9. A More General Univariate Optimization Problem	204
	10. Introduction to Multivariate Dynamic Optimization	207
	11. Another Example: Learning by Doing	211
	12. A Consumption Example	213
	13. Nonanticipative Representations and Lucas's Critique	216
	Exercises	217
	References	221
Chapter X	LINEAR LEAST SQUARES PROJECTIONS (REGRESSIONS)	223
	1. Linear Least Squares Regression: The Orthogonality Condition	223
	2. Recursive Projection	226
	3. The Law of Iterated Projections	228
	4. The Signal-Extraction Problem	229
	5. Signal Extraction with Dynamics	230
	6. The Term Structure of Interest Rates	232
	7. Application of the Law of Iterated Projections	235
	8. Conclusions	235
	Exercises	236
	References	238
Chapter XI	LINEAR STOCHASTIC DIFFERENCE EQUATIONS	239
	1. Introduction	239
	2. Preliminary Concepts	242

3. The Cross Covariogram	247
4. A Mathematical Digression on Fourier Transforms and z Transforms	249
5. Evaluating the Inverse z Transform	253
6. The Spectrum	256
7. The Cross Spectrum	265
8. A Digression on Leading Indicators	271
9. Analysis of Some Filters: The Slutsky Effect and Kuznets's Transformations	273
10. A Small Kit of $h(e^{-i\omega})$'s	276
11. Alternative Definitions of the Business Cycle	279
12. Index Models	283
13. Representation Theory	285
14. Linear Least Squares Prediction	290
15. Deriving a Moving Average Representation	294
16. Finding a Wold Representation: m th Order Moving Average	297
17. Finding a Wold Representation: An m th Order Moving Average, n th Order Autoregression	299
18. Signal Extraction Problems	300
19. Predicting Geometric Distributed Leads	303
20. The Chain Rule of Forecasting	305
21. Some Applications to Rational Expectations Models	305
22. Vector Stochastic Difference Equations	308
23. Optimal Filtering Formula	312
24. The Relationship Between Wiener-Granger Causality and Econometric Exogeneity	314
25. Sims's Application to Money and Income	324
26. Multivariate Prediction Formulas	327
27. The Effects of Filtering on One-Sided and Two-Sided Projections	329
28. Preservation of Orthogonality Conditions under Filtering	332
29. Theories Restricting One-Sided Projections	334
30. Seasonal Adjustment and Forecasting Geometric Distributed Leads	336
31. Aggregation over Time	342
32. Effects of Errors in Variables	346
33. Bubbles	348
Exercises	349
References	359

Chapter XII	THE CONSUMPTION FUNCTION	362
1. Introduction		362
2. The Consumer's Choice Problem		363
3. The Projection of Consumption on Labor Income		366
4. Muth's Special Case		368
5. Analyzing Tax Changes		369
6. The Projection of Consumption on Total Income: Friedman's Model		370
7. Projections on Labor Income and Current Assets		373

8. Transitory Consumption	374
9. Consumption, Permanent Income, and the Investment Accelerator: A Stochastic Growth Interpretation	376
10. Conclusions	378
References	378

Chapter XIII GOVERNMENT DEBT AND TAXES 380

1. Introduction	380
2. Observable Implications of Present Value Balanced Budgets	381
3. Tax Smoothing	385
4. A Note on Government Expenditures on Capital Account	388
5. Conclusions	390
References	390

Chapter XIV INVESTMENT UNDER UNCERTAINTY 391

1. Optimum Decision Rules under a Quadratic Objective	391
2. Optimal Linear Policies	396
3. Lucas's Critique	397
4. Investment	399
5. A Digression on the Relation Between Equilibrium and Optimality	401
6. Investment under Uncertainty	402
7. Supply, Demand and Identification	404
8. Investment under Uncertainty and an Externality	407
9. Conclusions	411
Exercises	412
References	417

Chapter XV DYNAMIC OPTIMAL TAXATION 419

1. Introduction	419
2. Equilibrium with the Government as Dominant Player and No Taxation of Initial Capital	420
3. Equilibrium with the Government as Dominant Player and Taxation of Initial Capital	428
4. Equilibrium with Limited Taxation of Initial Capital	429
5. A Game with a Sequence of "Administrations"	432
6. Conclusions	435
Exercises	436
References	437

Chapter XVI THE PHILLIPS CURVE 438

1. Lucas's Model	439
2. Serial Correlation in Output	444
Exercise	446
References	446

Chapter XVII	OPTIMAL MONETARY POLICY	447
	1. Optimal Control with Fixed Expectations	448
	2. The Information Variable Problem	454
	3. Optimal Control under Rational Expectations	457
	4. Which View Does the Evidence Favor?	459
	5. Should the Monetary Authority Use Interest or Money as Its Instrument?	460
	Exercises	463
	References	465
 Chapter XVIII	 ASPECTS OF THE NEW CLASSICAL MACROECONOMICS	 468
	1. Introduction	468
	2. The Classical Theory of Labor Supply and Consumption	469
	3. An Equilibrium Model of the Labor Market	472
	4. Disparate Information Sets	481
	5. Behavior of Economy-Wide Averages	489
	6. The Procyclical Behavior of "Labor Productivity" and "Real Hourly Earnings"	490
	7. Conclusions	495
	Exercise	496
	References	497
 Appendix	 FORMULAS FROM TRIGONOMETRY	 499
	Reference	500
 <i>Author Index</i>		 501
<i>Subject Index</i>		505
