

CONTENTS

Foreword (Pál Révész)	7
On the mathematical notion of information	11
Preface	11
The diary	16
First lecture	16
Second lecture	32
Third lecture	46
Fourth lecture	62
Fifth lecture	77
Preparation for my talk	86
Games of chance and probability theory	97
Introduction	97
On the shuffling of cards	98
Problems on the distribution of cards	104
Game strategies	112
A mathematician's war against the Casinos	122
Bibliography	126
Notes on the teaching of probability theory	127
1. Why should probability theory be taught?	127
2. What should be taught?	131
3. How should probability theory be taught?	133
Variations on a theme by Fibonacci	139
The theme	139
Final cadence	167

The mathematical theory of trees	168
Introduction	168
Enumerating problems relating to trees	170
Statistical theory of trees	177
Applications in operation research	180
Trees and information theory	183
Trees and permutations	186
Trees and chemistry	188
Trees and biology	190
Bibliography	192
