

Table of contents

Introduction	7
Section 1 - Where we are?	9
Overview of previous activities <i>Karel Charvat</i>	11
The EFITA ¹ ICT Adoption Questionnaire – Priority Indicators for the Future <i>E. Gelb</i>	29
Current situation on data exchange in agriculture in the EU27 and Switzerland <i>Frederick Teye, Henri Holster, Liisa Pesonen, Sarka Horakova</i>	37
Section 2 – Future challenges	49
From external drivers to future challenges <i>Karel Charvat</i>	51
Sustainability of rural systems and Poles of excellence: the role of Information and Communication Technologies <i>Gian Paolo Cesaretti, Rosa Misso</i>	59
Utilising Grounded Theory research techniques to catalyze knowledge discovery within a Living Lab environment <i>AAK. Buitendag, JS. Van Der Walt</i>	70
Exchanges of Environmental Information: the next challenge? <i>G. Waksman, S. Masselin-Silvin, F. Brun, J. Oberti, J.F. Samie, G. Cheruy, B. Prépin, A. Wissocq, J.C. Champomier, B. Dreux</i>	86
NASYP: Use of environmental modeling for preventing the impacts of major accidents with dangerous substances <i>Daniel Kahuda, Marek Vach, Otakar Čerba, Jan Bojko, Jan Ježek, Přemysl Vohnout, Vítězslav Dvořák</i>	98
Enabling the use and exploitation of environmental data for decision making: Bridging the gap between needs and requirements <i>Ana Saez, Karel Charvat, Francesco Molinari, Mariano Navarro, Lisa Maurer</i>	105
WWW Technologies and Regional Development <i>Zdeněk Havlíček, Petr Benda, Václav Lohr, Šilerová Edita</i>	132
Section 3 - Where we go?	149
What are the priorities for future research? <i>Karel Charvat</i>	151
Transparent Agrifood Interoperability, Based on a Simplified Dynamic Simulation Model <i>Monika Varga, Bela Csukas, Sandor Balogh</i>	155
A Business Intelligence Approach to Support a Greenhouse Tomato Crop Grey Mould Disease Early	175

Warning System

Miguel de Castro Neto, Fátima Baptista, Luis Manuel Navas, Gonçalo Ruiz

Towards a new theoretical framework: exploring the dynamics of using ICT for farming purposes	185
<i>Csótó Mihály</i>	

Data quality concepts and methods applied to biological species occurrence data	194
<i>Allan Koch Veiga, Antonio Mauro Saraiva, Etienne Americo Cartolano Junior</i>	

The central role of use cases in enhancing data exchange and interoperability in agriculture	206
<i>Rob Lokers, Liisa Pesonen, Cor Verdouw, Benedicte Fusai, Mario Schmitz</i>	

Competence centre SenGIS – exploring methods for georeferenced multi-sensor data acquisition, storage, handling and analysis	218
<i>M. Keller, C. Zech, M. Jackenkroll, M. Weis, J. Link-Dolezal, R. Gerhards, W. Claupein</i>	

Condition monitoring in centrifugal irrigation pumps with selforganizing feature visualisation	230
<i>Dimitrios Moshou, Ioannis Gravalos, Dimitrios Kateris, Athanasios Natsis, Nader Sawalhi, Spyridon Loutridis</i>	

VLIT NODE – new technology for wireless sensor network	241
<i>Zbynek Krivanek, Karel Charvat, Jan Jezek, Marek Musil</i>	

Selected Issues of Wireless Sensor Networks Geovisualization in Agriculture	249
<i>Petr Kubíček, Vojtěch Lukas and Jiří Kozel</i>	

Server-side solution for sensor data	264
<i>Jan Ježek, Michal Kepka</i>	

Advanced monitoring systems for processing sensor network data	275
<i>Filip Prochazka, Michal Oskera, Martin Svehla</i>	

An evolutionary approach to optimally distributing a fleet of robots for weed control in arable crops based on economical costs	280
<i>Jesus Conesa-Muñoz, Angela Ribeiro</i>	

Using linear programming for tactical planning in agriculture in the frame of the COIN project	300
<i>Karel Charvat junior, Pavel Gnip, Karel Charvat</i>	

Section 4 - Vision of the future	311
---	------------

What is the vision of the future?	313
<i>Karel Charvat, Zbynek Krivanek, Pavel Gnip, Karel Charvat junior</i>	

The need for continuous foresight in agriculture and food research – a case study based on Teagasc 2030	326
<i>Patrick Crehan</i>	

Section 5 - Conclusion	333
-------------------------------	------------
