## CHAPTER 1 INTRODUCING ENERGY SYSTEMS AND SUSTAINABILITY I

<b>1.1 Introduction</b>	<b>I</b>
<b>1.2 What is an 'energy system'?</b>	<b>I</b>
<b>1.3 The present global energy system</b>	<b>3</b>
Fossil fuels	6
Nuclear energy	7
Renewable energy sources	7
<b>1.4 What is a sustainable energy system?</b>	<b>9</b>
<b>1.5 Why sustainable energy matters</b>	<b>12</b>
Growthist: 'business as usual'	12
Peakist: fossil fuels limit growth	16
Environmentalist: global environment limits growth	18
Three perspectives: a summary	25
<b>1.6 How can we achieve the transition to low-carbon energy systems?</b>	<b>26</b>
Changing patterns of UK energy use	29
<b>1.7 Summary</b>	<b>30</b>
Key points	30
<b>References</b>	<b>32</b>

## CHAPTER 2 PRIMARY ENERGY 35

<b>2.1 Introduction</b>	<b>35</b>
<b>2.2 Consuming energy</b>	<b>35</b>
What is energy consumption?	36
What is primary energy?	36
'Energy arithmetic'	37
Energy and power	38
<b>2.3 Quantities of energy</b>	<b>40</b>
Units based on oil	40
Units based on coal	42
The BTU and related units	42
The calorie and related units	45

## 2.4 Interpreting the data 45

Definitions	45
Conversions	46
Conventions	46

## 2.5 World primary energy sources 48

World renewable energy	51
International comparisons	51

## 2.6 Primary energy in the UK 53

The UK's changing energy scene	54
Renewables in the UK	56

## 2.7 Primary energy in Denmark 57

Renewables in Denmark	60
-----------------------	----

## 2.8 Primary energy in the USA 61

Renewables in the USA	63
-----------------------	----

## 2.9 Other countries of interest 64

France	64
India	65
China	67

## 2.10 Summary 70

Key points	70
------------	----

## References 72

## CHAPTER 3 WHAT DO WE USE ENERGY FOR? 75

### 3.1 Introduction 75

### 3.2 Primary, final and useful energy 75

### 3.3 The expanding uses of energy 77

Food	78
Domestic energy	82
Industry	86
Transport	90
Services	91

### 3.4 UK energy uses today 92

UK electricity conversion losses	95
Trends in UK energy consumption	97

3.5 International comparisons	100	5.4 Uses of coal	152
Energy and GDP	100	The 19th century gasworks	152
More and more electricity	102	Modern coke production	155
More and more travel	104	Smokeless fuels	156
3.6 Summary	108	Coal for electricity	156
Key points	109	5.5 The coal resource	157
References	110	Mining the coal	157
CHAPTER 4 FORMS OF ENERGY	113	Resources, reserves and production	160
4.1 Introduction	113	5.6 Fires, furnaces and boilers	166
4.2 Kinetic and potential energy	113	Power station boilers	167
4.3 Heat	118	Flue gases	170
4.4 Electrical energy	119	Disposing of the ash	173
Electrons	120	5.7 Is there a future for coal?	174
Electrical circuits	121	5.8 Summary	174
4.5 Electromagnetic radiation	124	Key points	174
4.6 Chemical energy	128	References	176
The chemical elements	128	CHAPTER 6 HEAT TO MOTIVE POWER	179
Using chemical energy	129	6.1 Introduction	179
The nuclear atom	134	6.2 Steam engines	180
Isotopes	135	The early years	180
The energy	136	James Watt	182
4.7 Beyond chemistry	136	6.3 The principles of heat engines	183
The nuclear force	136	Carnot's law	184
Mass and energy	136	The Carnot engine	184
4.8 Summary	137	The laws of thermodynamics	187
The essentials	137	Atoms in motion	187
Key points	138	Heat flow	188
In conclusion	139	6.4 The age of steam	189
References	140	Improving the efficiency	189
CHAPTER 5 COAL	141	Mobile power	192
5.1 Introduction	141	6.5 Steam turbines	195
5.2 From wood to coal	142	Steam, speed and rpm	196
The early years	142	Parsons' turbo-generator	196
The Industrial Revolution	143	Marine engines	198
The 19th century	145	6.6 Power station turbine systems	199
5.3 The nature of coal	146	The turbines	199
Types of coal	146	The boiler	201
Composition of coal	147	The condenser	201
The combustion process	148	Materials	202
Proximate analysis	149		
Combustion products	150		

6.7 Flows in a 660 MW turbine system	203
The feedwater pump	205
The boiler	205
The turbines	205
The condenser	206
Efficiency	206
6.8 The future	207
6.9 Summary	207
Key points	207
References	210
Further reading	210
CHAPTER 7 OIL AND GAS	211
7.1 Introduction	211
7.2 The origins and geology of petroleum	211
7.3 The start of the oil and gas industries	214
Petroleum for illumination	214
Petroleum for transport	216
The natural gas industry	217
7.4 Finding and producing petroleum	218
Oil prospecting	218
Production	222
7.5 Oil refining and products	223
Getting more of what you want	225
7.6 Oil today	228
Reserves and production	228
The changing pattern of UK oil use	231
7.7 Natural gas	234
An energy revolution in the UK	234
Global gas reserves and production	238
The future prospects for gas in the UK	242
7.8 The rise and fall of North Sea oil and gas	242
7.9 Why are oil and gas so special?	245
High energy density – clean to burn	245

Convenient and easy to use	246
Ease of distribution, storage and portability	246
Readily available and (for the moment) cheap	246
7.10 Conversion technologies	246
Town gas from oil	247
Synthetic natural gas (SNG) from coal	248
Coal to liquids (CTL)	252
Gas to liquids (GTL)	254
Jet fuel and syngas from biomass	255
7.11 Unconventional oil and gas	255
Heavy oil and extra-heavy oil	255
Oil shales	256
Oil or tar sands	256
Tight oil and gas	257
Coal bed methane (CBM)	259
Methane hydrates	259
7.12 Peak oil or peak demand	259
Hubbert's shocking scenario	260
Has tight oil proved him wrong?	261
First the USA ... now the world	261
What is the future for natural gas?	262
Will climate change produce 'peak oil demand'?	262
7.13 Summary	263
Key points	263
References	265
CHAPTER 8 OIL AND GAS ENGINES	269
8.1 Introduction	269
8.2 The petrol or spark ignition engine	269
The birth of the car engine	272
The motorization of the USA	276
Aircraft petrol engines	277
Compression ratio and octane number	278
Lead additives	278
Alternative fuels	279

<b>8.3 The diesel or compression ignition engine</b>	<b>280</b>
Diesel power for ships	281
Diesel engines for road, rail and air	282
DERV	284
Biodiesel	284
<b>8.4 Petrol and diesel engines – reducing pollution</b>	<b>284</b>
Emissions from petrol engines	285
The lean-burn engine	286
The 3-way catalytic converter	287
Emissions from diesel engines	288
Obtaining best efficiency	289
<b>8.5 The gas turbine</b>	<b>290</b>
Two rival jet engines	291
Post-war developments	294
Modern jet engines	295
Industrial gas turbines	297
Gas turbines for cars?	297
Improving efficiency and CO <sub>2</sub> emissions	298
<b>8.6 The Stirling engine</b>	<b>298</b>
Principles	299
The Philips engine	300
<b>8.7 Which is the best engine?</b>	<b>301</b>
<b>8.8 Summary</b>	<b>303</b>
Key points	303
<b>References</b>	<b>305</b>
<b>Further reading</b>	<b>306</b>

## CHAPTER 9 ELECTRICITY 307

### 9.1 Introduction 307

### 9.2 Making electricity in the 19th century 308

Batteries and chemical electricity	308
Magnetism and generators	309
The telegraph	310
The rise of electric lighting and mains electricity	311
AC or DC?	314
High voltage or low voltage?	318
Simple metering and tariffs	321

### 9.3 The continuing development of electric lighting 321

Improving the incandescent light bulb	321
The fluorescent lamp	322
The light-emitting diode (LED)	324
Efficacy and colour rendering index	325
Pollution problems – the end of the incandescent?	326

### 9.4 Electric traction 327

Electric trams and trains	327
Battery electric vehicles	330
Electric transmissions and hybrid electric drives	333

### 9.5 Expanding uses 334

Telecommunications and computers	335
Cooking and heating	337
Refrigeration	338
Electric motors everywhere	342
Where electricity is used in the UK today	342

### 9.6 Large-scale generation 343

Competition versus economies of scale	343
Hydroelectricity	345
New fuels	346
Combined Heat and Power (CHP) generation	350

### 9.7 Transmission and distribution 353

The National Grid in the 1930s	353
Coal by wire	354
The Supergrid	354
The UK grid today	355
International links	356

### 9.8 Running the system 357

Four tasks	357
What exactly is being optimized?	358
Ownership of the system	358
Balancing supply and demand	359
Peak demands and pumped storage	360

Coping with the variability of renewable energy	361
Smart meters and smart grids	362
<b>9.9 Electricity around the world</b>	<b>363</b>
UK	363
USA	364
France	364
Denmark	365
India	366
China	366
<b>9.10 Summary</b>	<b>368</b>
Key points	368
<b>References</b>	<b>370</b>
<b>Further reading</b>	<b>371</b>
<b>CHAPTER 10 NUCLEAR POWER</b>	<b>373</b>
<b>10.1 Introduction</b>	<b>373</b>
Nuclear power worldwide	373
<b>10.2 Nuclei: a brief summary</b>	<b>375</b>
<b>10.3 Radioactivity</b>	<b>376</b>
Alpha particles	378
Beta particles	378
Gamma radiation	380
Radioactive decay and half-life	380
An effect without a cause	382
<b>10.4 Nuclear fission</b>	<b>382</b>
Experiments with neutrons	382
Fission	383
1939–1945: reactors and bombs	387
‘Swords into ploughshares’	392
<b>10.5 Thermal fission reactors</b>	<b>393</b>
The reactor	394
Safety	395
Thermal efficiency	398
<b>10.6 Types of thermal fission reactor</b>	<b>398</b>
Light water reactors	398
Gas-cooled reactors	400
Heavy water reactors	403
RBMK reactors	404
Summary of reactor types	405

<b>10.7 Nuclear fuel cycles</b>	<b>406</b>
Mining and extraction	406
Enrichment and fuel fabrication	407
Spent fuel	408
<b>10.8 Fast neutron reactors</b>	<b>410</b>
Liquid metal fast breeder reactors	410
Safety	411
<b>10.9 Power from fusion</b>	<b>412</b>
<b>10.10 Summary</b>	<b>414</b>
Key points	414
<b>References</b>	<b>416</b>
<b>Further reading</b>	<b>416</b>

<b>CHAPTER 11 THE FUTURE OF NUCLEAR POWER</b>	<b>417</b>
<b>11.1 Introduction</b>	<b>417</b>
<b>11.2 The current state of play</b>	<b>417</b>
Favourable pressures	418
Unfavourable pressures	419
<b>11.3 The uranium resource</b>	<b>421</b>
Availability of uranium ore	421
Energy return on investment	424
<b>11.4 Solutions to possible uranium limitations</b>	<b>425</b>
‘Secondary’ sources of uranium	425
Using mixed oxide fuel (MOX)	426
Recycling PWR fuel into CANDUs	427
‘Enhanced burn-up’ in light water reactors	427
<b>11.5 Nuclear power and safety</b>	<b>429</b>
<b>11.6 Waste disposal and decommissioning</b>	<b>432</b>
Waste and the nuclear fuel cycle	432
Long-term waste storage	434
Plant decommissioning	436
<b>11.7 Generation costs and the prospects for cheaper nuclear power</b>	<b>436</b>
The factors determining generation cost	436
Reducing nuclear costs	439

**11.8 Beyond the basic open fuel cycle 440**

Closing the fuel cycle – reprocessing 440

Nuclear proliferation issues 442

Plutonium production in fast breeder reactors 443

Breeding uranium from thorium 444

Nuclear fusion 445

**11.9 A nuclear renaissance? Conflicting views 446**

**11.10 Summary 449**

Key points 449

**References 451**

**CHAPTER 12 COSTING ENERGY 455**

**12.1 Introduction 455**

**12.2 Energy prices today 456**

Petrol and diesel fuel 456

Domestic energy prices 457

Industrial energy prices 459

**12.3 Inflation, 'real' prices and affordability 460**

The value of money 460

Affordability and fuel poverty 465

**12.4 Investing in energy 467**

Price and cost 467

Balancing investment against cash flow 468

Discounted cash flow analysis 472

**12.5 Real-world complications 485**

Energy security and diversity of supply 486

Imbalances between energy supply and demand 486

Tackling air pollution 487

Encouraging energy efficiency with fuel taxes 487

New energy technologies and economies of scale 487

**12.6 Summary 490**

Key points 490

**References 493**

**CHAPTER 13 PENALTIES: ASSESSING THE ENVIRONMENTAL AND HEALTH IMPACTS OF ENERGY USE 495**

**13.1 Introduction 495**

**13.2 Climate change 496**

The human perturbation of the carbon cycle 496

Other greenhouse gases 499

The present effects of anthropogenic climate change 501

The future consequences of climate change 502

Progress in reducing greenhouse gas emissions 502

**13.3 Air-quality-related impacts 504**

Forms of airborne pollution 504

Wood burning in developing countries 507

The effects of acid rain 508

Particulates 509

Progress in reducing air pollution 510

**13.4 Classifying the impacts of energy use 513**

By scale 513

By source 513

By public concern 514

**13.5 The full financial costs of energy use 516**

Energy subsidies 516

The external costs of energy use 517

Using damage costs to evaluate technologies 527

**13.6 Nuclear power: impacts of routine operation 532**

Public impacts 532

Workplace impacts 534

**13.7 Accidents across fuel chains 535**

Coal 535

Oil and gas 536

Hydro power 536

Wind power 537

Biomass harvesting and forestry 537

Nuclear power 537

<b>13.8 Energy return on investment (EROI)</b>	<b>538</b>
EROI of electricity generation	539
Liquid fuels	540
Future EROI for fossil fuels	541
<b>13.9 Land requirements</b>	<b>541</b>
<b>13.10 Summary</b>	<b>542</b>
Key points	542
<b>References</b>	<b>545</b>

<b>CHAPTER 14 REMEDIES: TOWARDS A SUSTAINABLE ENERGY FUTURE</b>	<b>551</b>
---	------------

<b>14.1 Introduction</b>	<b>551</b>
<b>14.2 Cleaning up fossil fuels</b>	<b>553</b>
Low-level air pollution	553
Reducing carbon dioxide emissions	555
<b>14.3 Carbon dioxide removal</b>	<b>564</b>
Reforestation	564
Bioenergy with carbon capture and storage	565
Direct air capture (DAC)	565
<b>14.4 Reducing energy demand</b>	<b>566</b>
Saving space heating energy	566
The transport sector	568
<b>14.5 Harnessing renewable energy</b>	<b>570</b>
Solar energy	570
Indirect use of solar energy	573
Non-solar renewable energy	577
The sustainability of renewable energy	580

<b>14.6 Increased use of nuclear power</b>	<b>580</b>
--	------------

<b>14.7 Hydrogen: the fuel of the future?</b>	<b>581</b>
Producing hydrogen	581
Properties of hydrogen	582
Hydrogen storage	583
Hydrogen transmission	583
Using hydrogen	583
A full hydrogen economy	588

<b>14.8 Towards a sustainable world energy future</b>	<b>589</b>
Tackling climate change	589
Climate change policy in the UK	590
Scenarios for future world energy use	592
The effects of the Covid-19 pandemic	594
Change and investment	595
Signs of change?	595

<b>14.9 Summary</b>	<b>596</b>
Key points	596

<b>References</b>	<b>600</b>
