

Scope

List of images	10
List of tables	11
List of symbols and abbreviations	12
Introduction	13
1 Terminology and classification of the pitched roof structures	17
1.1 Historical evolution of the roof structures since 19 th century	17
1.2 Terminology of the pitched roof structures	17
1.3 Classification of the pitched roof structure	20
2 Requirements and criteria for the pitched roofs	25
2.1 The architectural requirements	25
2.1.1 External architectural requirements regarding the shape, volume and type of a roof	25
2.2 The constructional requirements	26
2.3 The static requirements	31
2.4 The fire safety requirements	32
2.5 The aerodynamic and hydrodynamic requirements	33
2.6 The acoustic requirements	34
2.7 The thermal requirements	36
2.7.1 The heat transfer coefficient	36
2.7.2 The overall heat transfer coefficient	38
2.8 The economic requirements	38
2.9 Partial conclusion	39
3 Determination of the cardinal and the ordinal parameters during building materials selection	41
3.1 Definition of the cardinal parameters	42
3.1.1 Thermally insulating properties	42
3.1.2 The technical requirements	43
3.1.3 The sound insulating requirements	43
3.2 Definition of the ordinal parameters	45
3.2.1 The environmental aspect	45
3.2.2 Life cycle (Durability)	45
3.2.3 Maintenance-free	46

3.2.4 Architectural and esthetic level	47
3.3 The definition of the assessing parameters and its values for selecting a process	48
3.4 Selection process	48
3.5 Partial conclusion	54
4 The experimental chambers for monitoring the physical properties of the external and roof constructions in non-stationary conditions	55
4.1 Present knowledge status in the worldwide climate chamber area	55
4.2 The climate chambers at the Faculty of Civil Engineering in Košice	56
4.3 Construction and material climatic tests	57
4.4 The monitoring chambers	58
4.4.1 Installation of the monitoring chambers	59
4.4.2 Climate unit	59
4.4.3 Monitoring chamber number 1	60
4.4.4 Monitoring chamber number 2	63
4.4.5 Monitoring chamber number 3	65
4.5 Design of the roof construction composition in the chamber number 2	65
4.5.1 Production of the roof cladding measurable sample	67
4.6 Partial conclusion	71
5 Methods of assessing the testing measurements in the climate chambers	73
5.1 Methodology from the quantity determination aspect	73
5.2 Methodology from the technical equipment aspect	75
5.2.1 The equipment	75
5.2.2 Software	76
5.2.3 Measuring appliances for the assessment of the physical propertiest	78
5.2.4 Sensor types and the measuring central connection	79
5.2.5 Sensor placement and type in the roof cladding testing sample	80
5.3 Methodology from the space aspect	84
5.4 Methodology from the time aspect	85
5.5 Partial conclusion	86

6 The roof construction adjusted to the vegetating (green) roof	89
7 Results of the measurements in the climate chamber module	97
7.1 Evaluation of the testing measurements of the roof cladding adjusted about the green /vegetating/ roof module in the climate chamber module.	97
7.1.1 Measurement of the heat transfer coefficient through the roof construction	97
7.1.2 Concluding summary from the measurement of the heat transfer coefficient through the roof construction	104
8 The roof construction adjusted with the vegetating (green) roof II.	105
Bibliography	114
Abstrakt	119
Abstract	120
