

# Contents

<b>Preface</b>	<b>xi</b>
<b>1. Why Data Structures Matter</b>	<b>1</b>
Data Structures	2
The Array: The Foundational Data Structure	3
Measuring Speed	4
Reading	5
Searching	8
Insertion	11
Deletion	13
Sets: How a Single Rule Can Affect Efficiency	15
Wrapping Up	18
Exercises	19
<b>2. Why Algorithms Matter</b>	<b>21</b>
Ordered Arrays	22
Searching an Ordered Array	24
Binary Search	26
Binary Search vs. Linear Search	31
Wrapping Up	34
Exercises	34
<b>3. O Yes! Big O Notation</b>	<b>35</b>
Big O: How Many Steps Relative to N Elements?	36
The Soul of Big O	37
An Algorithm of the Third Kind	40
Logarithms	41
O(log N) Explained	42
Practical Examples	43
Wrapping Up	45
Exercises	45
<b>4. Speeding Up Your Code with Big O</b>	<b>47</b>
Bubble Sort	47

Bubble Sort in Action	48
The Efficiency of Bubble Sort	53
A Quadratic Problem	56
A Linear Solution	58
Wrapping Up	60
Exercises	60
<b>5. Optimizing Code with and Without Big O . . . . .</b>	<b>63</b>
Selection Sort	63
Selection Sort in Action	64
The Efficiency of Selection Sort	70
Ignoring Constants	71
Big O Categories	72
Wrapping Up	76
Exercises	76
<b>6. Optimizing for Optimistic Scenarios . . . . .</b>	<b>79</b>
Insertion Sort	79
Insertion Sort in Action	80
The Efficiency of Insertion Sort	86
The Average Case	88
A Practical Example	91
Wrapping Up	93
Exercises	93
<b>7. Big O in Everyday Code . . . . .</b>	<b>95</b>
Mean Average of Even Numbers	95
Word Builder	97
Array Sample	99
Average Celsius Reading	100
Clothing Labels	101
Count the Ones	102
Palindrome Checker	102
Get All the Products	103
Password Cracker	107
Wrapping Up	109
Exercises	109
<b>8. Blazing Fast Lookup with Hash Tables . . . . .</b>	<b>113</b>
Hash Tables	113
Hashing with Hash Functions	114

Building a Thesaurus for Fun and Profit, but Mainly Profit	115
Hash Table Lookups	117
Dealing with Collisions	119
Making an Efficient Hash Table	122
Hash Tables for Organization	124
Hash Tables for Speed	125
Wrapping Up	130
Exercises	131
<b>9. Crafting Elegant Code with Stacks and Queues . . . . .</b>	<b>133</b>
Stacks	133
Abstract Data Types	136
Stacks in Action	137
The Importance of Constrained Data Structures	143
Queues	144
Queues in Action	146
Wrapping Up	147
Exercises	148
<b>10. Recursively Recurse with Recursion . . . . .</b>	<b>149</b>
Recurse Instead of Loop	149
The Base Case	151
Reading Recursive Code	151
Recursion in the Eyes of the Computer	154
Filesystem Traversal	156
Wrapping Up	159
Exercises	159
<b>11. Learning to Write in Recursive . . . . .</b>	<b>161</b>
Recursive Category: Repeatedly Execute	161
Recursive Category: Calculations	166
Top-Down Recursion: A New Way of Thinking	168
The Staircase Problem	173
Anagram Generation	177
Wrapping Up	181
Exercises	181
<b>12. Dynamic Programming . . . . .</b>	<b>183</b>
Unnecessary Recursive Calls	183
The Little Fix for Big O	187
The Efficiency of Recursion	188

Overlapping Subproblems	189
Dynamic Programming through Memoization	191
Dynamic Programming through Going Bottom-Up	194
Wrapping Up	196
Exercises	197
<b>13. Recursive Algorithms for Speed</b>	<b>199</b>
Partitioning	199
Quicksort	205
The Efficiency of Quicksort	211
Quicksort in the Worst-Case Scenario	216
Quickselect	218
Sorting as a Key to Other Algorithms	222
Wrapping Up	223
Exercises	224
<b>14. Node-Based Data Structures</b>	<b>225</b>
Linked Lists	225
Implementing a Linked List	227
Reading	229
Searching	231
Insertion	232
Deletion	236
Efficiency of Linked List Operations	238
Linked Lists in Action	239
Doubly Linked Lists	240
Queues as Doubly Linked Lists	242
Wrapping Up	244
Exercises	244
<b>15. Speeding Up All the Things with Binary Search Trees</b>	<b>247</b>
Trees	248
Binary Search Trees	250
Searching	251
Insertion	256
Deletion	260
Binary Search Trees in Action	271
Binary Search Tree Traversal	272
Wrapping Up	276
Exercises	276

<b>16. Keeping Your Priorities Straight with Heaps</b>	<b>279</b>
Priority Queues	279
Heaps	281
Heap Properties	284
Heap Insertion	285
Looking for the Last Node	287
Heap Deletion	288
Heaps vs. Ordered Arrays	292
The Problem of the Last Node...Again	293
Arrays as Heaps	295
Heaps as Priority Queues	302
Wrapping Up	302
Exercises	303
<b>17. It Doesn't Hurt to Trie</b>	<b>305</b>
Tries	306
Storing Words	307
Trie Search	311
The Efficiency of Trie Search	315
Trie Insertion	316
Building Autocomplete	320
Completing Autocomplete	326
Tries with Values: A Better Autocomplete	327
Wrapping Up	328
Exercises	329
<b>18. Connecting Everything with Graphs</b>	<b>331</b>
Graphs	332
Directed Graphs	334
Object-Oriented Graph Implementation	334
Graph Search	337
Depth-First Search	339
Breadth-First Search	348
The Efficiency of Graph Search	361
Weighted Graphs	364
Dijkstra's Algorithm	367
Wrapping Up	384
Exercises	384
<b>19. Dealing with Space Constraints</b>	<b>387</b>
Big O of Space Complexity	387

Trade-Offs Between Time and Space	390
The Hidden Cost of Recursion	393
Wrapping Up	395
Exercises	395
<b>20. Techniques for Code Optimization . . . . .</b>	<b>397</b>
Prerequisite: Determine Your Current Big O	397
Start Here: The Best-Imaginable Big O	397
Magical Lookups	399
Recognizing Patterns	406
Greedy Algorithms	414
Change the Data Structure	427
Wrapping Up	433
Parting Thoughts	433
Exercises . . . . .	434
<b>A1. Exercise Solutions . . . . .</b>	<b>439</b>
Chapter 1	439
Chapter 2	440
Chapter 3	440
Chapter 4	441
Chapter 5	442
Chapter 6	442
Chapter 7	443
Chapter 8	444
Chapter 9	446
Chapter 10	447
Chapter 11	448
Chapter 12	450
Chapter 13	451
Chapter 14	453
Chapter 15	456
Chapter 16	458
Chapter 17	459
Chapter 18	461
Chapter 19	464
Chapter 20	465
<b>Index . . . . .</b>	<b>475</b>
