

Contents: Unit R

The Laws of Physics Are Frame-Independent

About the Author	vii	Chapter Overview	44
Preface	viii	R3.1 The Three Kinds of Time	46
Introduction for Students	xiv	R3.2 The Metric Equation	48
		R3.3 About Perpendicular Displacements	51
		R3.4 Evidence Supporting the Metric Equation	53
		R3.5 Spacetime Is <i>Not</i> Euclidean	55
		R3.6 More About the Geometric Analogy	56
		R3.7 Some Examples	58
Chapter R1	2	TWO-MINUTE PROBLEMS	60
The Principle of Relativity	2	HOMEWORK PROBLEMS	61
		ANSWERS TO EXERCISES	64
Chapter Overview	2		
R1.1 Introduction to the Principle	4	Chapter R4	66
R1.2 Events, Coordinates, and Reference Frames	6	Proper Time	66
R1.3 Inertial Reference Frames	8		
R1.4 The Final Principle of Relativity	11	Chapter Overview	66
R1.5 Newtonian Relativity	11	R4.1 A Curved Footpath	68
R1.6 The Problem of Electromagnetic Waves	15	R4.2 Curved Worldlines in Spacetime	69
TWO-MINUTE PROBLEMS	18	R4.3 The Binomial Approximation	73
HOMEWORK PROBLEMS	19	R4.4 Ranking the Three Kinds of Time	74
ANSWERS TO EXERCISES	21	R4.5 Experimental Evidence	76
		R4.6 The Twin Paradox	78
Chapter R2	22	TWO-MINUTE PROBLEMS	81
Coordinate Time	22	HOMEWORK PROBLEMS	82
		ANSWERS TO EXERCISES	85
Chapter Overview	22		
R2.1 Relativistic Clock Synchronization	24	Chapter R5	86
R2.2 SR Units	25	Coordinate Transformations	86
R2.3 Spacetime Diagrams	27		
R2.4 Spacetime Diagrams as Movies	29	Chapter Overview	86
R2.5 The Radar Method	31	R5.1 Overview of Two-Observer Diagrams	88
R2.6 Coordinate Time Is Frame-Dependent	32	R5.2 Conventions	89
R2.7 A Geometric Analogy	35	R5.3 Drawing the Diagram t' Axis	90
TWO-MINUTE PROBLEMS	38	R5.4 Drawing the Diagram x' Axis	92
HOMEWORK PROBLEMS	39	R5.5 Reading the Two-Observer Diagram	94
ANSWERS TO EXERCISES	42	R5.6 The Lorentz Transformation	95
		TWO-MINUTE PROBLEMS	99
Chapter R3	44	HOMEWORK PROBLEMS	100
The Spacetime Interval	44	ANSWERS TO EXERCISES	104

Chapter R6	108	Appendix RA	180
Lorentz Contraction	108	Converting Equations to SI Units	180
Chapter Overview	108	RA.1 Why Use SR Units?	180
R6.1 The Length of a Moving Object	110	RA.2 Conversion of Basic Quantities	180
R6.2 A Two-Observer Diagram of a Stick	110	RA.3 Converting SR Unit Equations to SI Unit Equations	181
R6.3 What Causes the Contraction?	112	RA.4 Energy-Based SR Units	182
R6.4 The Contraction Is Frame-Symmetric	114	RA.5 Exercises for Practice	182
R6.5 The Barn and Pole Paradox	115		
R6.6 Other Ways to Define Length	118		
TWO-MINUTE PROBLEMS	120		
HOMEWORK PROBLEMS	120		
ANSWERS TO EXERCISES	125		
Chapter R7	126	Appendix RB	184
The Cosmic Speed Limit	126	The Relativistic Doppler Effect	184
Chapter Overview	126	RB.1 Introduction to the Doppler Effect	184
R7.1 Causality and Relativity	128	RB.2 Deriving the Doppler Shift Formula	184
R7.2 Timelike, Lightlike, and Spacelike Intervals	131	RB.3 Astrophysical Applications	186
R7.3 The Causal Structure of Spacetime	134	RB.4 The Nonrelativistic Limit	187
R7.4 The Einstein Velocity Transformation	136	RB.5 Doppler Radar	187
TWO-MINUTE PROBLEMS	139	HOMEWORK PROBLEMS	188
HOMEWORK PROBLEMS	140	ANSWERS TO EXERCISES	188
ANSWERS TO EXERCISES	143		
Chapter R8	144	Index	190
Four-Momentum	144	Periodic table	193
Chapter Overview	144	Short Answers to Selected Problems	194
R8.1 A Plan of Action	146		
R8.2 Newtonian Momentum Isn't Conserved	147		
R8.3 The Four-Momentum Vector	148		
R8.4 Properties of Four-Momentum	151		
R8.5 Four-Momentum and Relativity	153		
R8.6 Relativistic Energy	155		
TWO-MINUTE PROBLEMS	158		
HOMEWORK PROBLEMS	158		
ANSWERS TO EXERCISES	161		
Chapter R9	162		
Conservation of Four-Momentum	162		
Chapter Overview	162		
R9.1 Energy-Momentum Diagrams	164		
R9.2 Solving Conservation Problems	166		
R9.3 The Mass of a System of Particles	169		
R9.4 The Four-Momentum of Light	171		
R9.5 Applications to Particle Physics	174		
R9.6 Parting Comments	175		
TWO-MINUTE PROBLEMS	176		
HOMEWORK PROBLEMS	177		
ANSWERS TO EXERCISES	179
