

# Summary of contents

Introduction: orientation and background	1
<b>Part 1: Equilibrium</b>	<b>11</b>
1 The properties of gases	13
2 The First Law: the concepts	45
3 The First Law: the machinery	81
4 The Second Law: the concepts	97
5 The Second Law: the machinery	125
6 Physical transformations of pure substances	141
7 Simple mixtures	163
8 Phase diagrams	191
9 Chemical equilibrium	215
10 Equilibrium electrochemistry	243
<b>Part 2: Structure</b>	<b>283</b>
11 Quantum theory: introduction and principles	285
12 Quantum theory: techniques and applications	313
13 Atomic structure and atomic spectra	343
14 Molecular structure	387
15 Molecular symmetry	427
16 Spectroscopy 1: rotational and vibrational spectra	453
17 Spectroscopy 2: electronic transitions	497
18 Spectroscopy 3: magnetic resonance	527
19 Statistical thermodynamics: the concepts	567
20 Statistical thermodynamics: the machinery	593
21 Diffraction techniques	619
22 The electric and magnetic properties of molecules	649
23 Macromolecules and colloids	679
<b>Part 3: Change</b>	<b>721</b>
24 Molecules in motion	723
25 The rates of chemical reactions	761
26 The kinetics of complex reactions	793
27 Molecular reaction dynamics	819
28 Processes at solid surfaces	849
29 Dynamic electrochemistry	877
Further information	905
Data section	917
Answers to exercises	955
Answers to problems	980
Partial answers to microprojects	996
Index	998

# Contents

Conventions	xvii	3 The First Law: the machinery	81
0 Introduction: orientation and background	1	State functions and exact differentials	81
The structure of science	1	3.1 State functions	82
Matter	2	3.2 The temperature dependence of the enthalpy	86
Energy	3	3.3 The relation between $C_V$ and $C_p$	90
0.1 Contributions to the energy	3	Checklist of key ideas	92
0.2 Energy units	4	Further reading	92
0.3 Equipartition	4	Exercises	92
0.4 The quantization of energy	5	Problems	93
0.5 The populations of states	7	4 The Second Law: the concepts	97
Further reading	9	The direction of spontaneous change	98
<b>Part 1: Equilibrium</b>	<b>11</b>	4.1 The dispersal of energy	98
1 The properties of gases	13	4.2 Entropy	99
The perfect gas	13	4.3 Entropy changes accompanying specific processes	106
1.1 The states of gases	13	4.4 The Third Law of thermodynamics	110
1.2 The gas laws	17	4.5 Reaching very low temperatures	112
1.3 The kinetic model of gases	23	Concentrating on the system	113
Real gases	30	4.6 The Helmholtz and Gibbs energies	113
1.4 Molecular interactions	31	4.7 Standard molar Gibbs energies	118
1.5 The van der Waals equation	33	Checklist of key ideas	119
1.6 The principle of corresponding states	37	Further reading	120
Checklist of key ideas	38	Exercises	120
Further reading	39	Problems	122
Exercises	39	5 The Second Law: the machinery	125
Problems	42	Combining the First and Second Laws	125
2 The First Law: the concepts	45	5.1 Properties of the internal energy	126
The basic concepts	45	5.2 Properties of the Gibbs energy	128
2.1 Work, heat, and energy	46	5.3 The chemical potential of a pure substance	132
2.2 The First Law	48	Real gases: the fugacity	132
Work and heat	51	5.4 The definition of fugacity	133
2.3 Expansion work	51	5.5 Standard states of real gases	133
2.4 Heat transactions	55	5.6 The relation between fugacity and pressure	133
2.5 Enthalpy	57	Checklist of key ideas	136
2.6 Adiabatic changes	62	Further reading	136
Thermochemistry	65	Exercises	137
2.7 Standard enthalpy changes	66	Problems	137
2.8 Standard enthalpies of formation	70	6 Physical transformations of pure substances	141
2.9 The temperature dependence of reaction enthalpies	72	Phase diagrams	141
Checklist of key ideas	73	6.1 The stabilities of phases	142
Further reading	74	6.2 Phase boundaries	142
Exercises	75	6.3 Three typical phase diagrams	143
Problems	78		

<b>Phase stability and phase transitions</b>	<b>145</b>	<b>The response of equilibria to the conditions</b>	<b>222</b>
