

Applied Soils and Micromorphology in Archaeology provides the most up-to-date information on soil science and its applications in archaeology. Based on more than three decades of investigations and experiments, the volume demonstrates how description protocols and complementary methods (SEM/EDS, microprobe, micro-FTIR, bulk soil chemistry, micro- and macrofossils) are used in interpretations. It also focuses on key topics, such as palaeosols, cultivation, and occupation surfaces, and introduces a range of current issues, such as site inundation, climate change, settlement morphology, herding, trackways, industrial processes, funerary features, and site transformation. Structured around important case studies, *Applied Soils and Micromorphology in Archaeology* is thoroughly illustrated, with color plates and additional figures available at www.cambridge.org/9781107648685. Chapter appendices can be accessed separately by visiting www.geoarchaeology.info/asma. This new book will serve as an essential volume for all archaeological inquiry about soil.

RICHARD I. MACPHAIL is Senior Research Fellow at the Institute of Archaeology, University College London. He is coauthor of *Soils and Micromorphology in Archaeology* (Cambridge University Press, 1989) and *Practical and Theoretical Geoarchaeology* (2006).

PAUL GOLDBERG is Professor Emeritus at the Department of Archaeology, Boston University and Professorial Research Professor at the University of Wollongong, Australia. He is coauthor of *Soils and Micromorphology in Archaeology* (Cambridge University Press, 1989) and *Practical and Theoretical Geoarchaeology* (2006).
