

Table of Contents

<i>Preface</i>	vii
<i>Organisers</i>	ix
<i>Scientific Committee</i>	x
<i>Organising Committee</i>	xi
Plenary Lectures	
Janiuk, R. M.: <i>Trainers of chemistry teachers – what we know about them and their work?</i>	1
Parchmann, I., Peper, M., Huber, A., Wickleder, M.: <i>Research-based development of exercises for heterogeneous groups of 1st year students of chemistry, life sciences and future chemistry teachers</i>	6
Tausch, M.W., Bohrmann-Linde, C.: <i>Curriculum modernization in chemical education</i>	10
Zoller, U.: <i>Assessment of beyond (just) “knowledge” – a doable practice in tertiary chemistry education</i>	14
Problem and Context Based Chemistry Education	
Arroio, A., Porto Francisco, R.H.: <i>Communicating science: Writing</i>	20
Arroio, A.: <i>Discourse analysis into the preservice training of chemistry teacher</i>	24
Bello, S., Herrera, A., Velázquez, L.: <i>In search of chemistry students' previous ideas related to chemical bonding</i>	29
Cardellini, L.: <i>Equilibrium problems: How to solve them.</i>	33
Childs, P.E., Sheehan, M.A.: <i>What chemistry topics do students find difficult?</i>	38
Cieśla, P., Nodzyńska, M., Paško, J.R.: <i>The role of didactics of chemistry in moulding teachers' priorities of goals in chemical education</i>	44
Gulińska, H.: <i>Teacher pre-learning as a problem included in the “Ciekawa Chemia” (“Interesting Chemistry”) handbook</i>	48
Karawajczyk, B.: <i>Knowledge of solutions taken towards environmental protection – the survey among students</i>	53
Morgil, Ī., Ural, E., Temel, S.: <i>Assessment of student perceptions in project based chemistry applications</i>	56
Morgil, Ī., Özyalçın Oskay, Ö., Temel, S.: <i>The effects of goal orientation and self-directed learning on pre-service chemistry students' achievement</i>	61
Morgil, Ī., Seçken, N., Seda Yücel, A., Özyalçın Oskay, Ö., Temel, S.: <i>The Relationship Between Chemistry Education And Media.</i>	66
Nesmĕrák, K.: <i>Laboratory course in analytical chemistry -- some discussion remarks</i>	70
Overton, T., Potter, N.: <i>Context-based open-ended problems in chemistry</i>	75
Salzer, R., Machill, S., Schulze, R., Haufe, M.: <i>Case studies for practicals in analytical chemistry</i>	79
Uzuntiryaki, E., Capa Aydin, Y.: <i>The relationship between high school students' chemistry self-efficacy and chemistry achievement.</i>	81

Žoldošová, K., Held, L.: Content analysis of children's preconceptions about chemical phenomena as an important resource for further analysis of predispositions required for the preconceptions development	84
New methods in Chemistry Education	
Čtrnáctová, H., Čížková, V.: Activation methods in education of chemistry students at tertiary level	91
Esteban, S., Pérez-Esteban, J.: Chemistry and agriculture: A success of Liebig's ideas	96
Ganajová, M., Kukřová, L.: Chemistry popularizing by means of project works dealing with the topic of "Constant sustainable development"	99
Hernández, G., Carrillo, M., Irazoque, G., López, M. N., Nieto, E.: Iron experiment as an example of knowledge integrating nucleus	103
Kelly, O.: Snowballs, sugar paper and students – enhancing learning for non-chemists.	108
Last, A.M.: The butler did it: the use of detective fiction to illustrate some chemical and physical properties of gases.	113
McCrudden, E., Finlayson, O.E.: The use of PADs in continuous assessment.	117
Nieto, E., Carrillo, M., Hernández, G., Irazoque, G., López, M. N.: Teaching innovations of themes difficult to understand in chemistry.	121
Orlik, Y., Gonzalez, G.: Using the schematic representation of teaching and learning materials in science classes	126
Rideg, N., Pavlath, A., Nemeth, V.: "Pictures of an exhibition" – a possible way to make chemistry more popular	130
Practical Chemistry Education	
Burewicz, A., Jagodziński, P., Wolski, R.: How to solve laboratory problems and tasks in chemical education?	133
Di Fuccia, D.-S., Ralle, B.: Lab work and the understanding of science	136
Finlayson, O.E., Lovatt, J., Ramírez-García, S.: Small-scale teaching within large groups – empowering the tutors in a 1st year undergraduate chemistry laboratory.	140
Irazoque Palazuelos, G., Carrillo Chávez, M., Hernández Millán, G., López Villa, N.M., Nieto Calleja, E.: Chemical demonstration. An integrated methodology for chemical education.	146
Lovatt, J., Finlayson, O.E., Ramirez, S.: Modification of an expository laboratory for 1st year undergraduate chemistry	150
Maciejowska, I., Woźniakiewicz, M., Wietecha-Postuszny, R., Strzelecki, A., Słoboda, M., Kościelniak, P.: The Flash MX supported manual for forensic chemistry students	156
Martínek, V., Šulcová, R., Martínková, M.: How could chemistry teachers explain tobacco smoke toxicity and carcinogenicity to students?	159
Melichová, Z., Nagyová, I.: Electrochemistry and redox reactions in chemistry education.	165

Morgil, I., Temel, S.: <i>The effect of problem solving approach in laboratory on students' attitudes and performances within chemistry education</i>	170
Morgil, I., Güngör Seyhan, H., Temel, S.: <i>Inquiry based experiment suggestions and their effect on student success and gains in chemistry applications</i>	175
Morgil, I., Yücel, A.S., Seçken, N., Temel, S.: <i>Effects of project oriented laboratory course on students' anxiety and performance</i>	180
Skoršepa, M.: <i>Computer supported electrochemistry</i>	185
Šmejkal, P., Stratilová-Urválková, E.: <i>A comprehensive approach to experiments using the multifunctional data logger</i>	190
Šulcová, R., Böhmová, H., Pisková, D.: <i>Present conception of laboratory activities in chemistry education</i>	195
 Information and communication technology (ICT) in chemistry education	
Ardac, D., Akaygun, S.: <i>Students' interpretations and gains from different animations on h-bonding</i>	199
Bartoszewicz, M., Gulińska, H.: <i>Interactive voting system and interactive display board in teaching elements of chemistry at the academic level</i>	202
Burewicz, A., Jagodziński, P., Wolski, R.: <i>Developing experimental abilities. computer aided teaching for chemistry students</i>	206
Burewicz, A., Miranowicz, M., Miranowicz, N.: <i>E-learning in continuously learning – I*teach project</i>	211
Byers, B.: <i>ECTN (The European Chemistry Thematic Network): Promoting cooperation, harmony, synergy, and innovation throughout the EC</i>	216
Čípera, J., Klímová, H., Chlubna, P., Dvořák, M., Kamlar, M., Roštejská, M., Teplý, P.: <i>Chemistry education – computers ICT</i>	221
Dąbek, M., Gulińska, H.: <i>The interactive whiteboard in teaching chemistry</i>	226
Ehses, M.: <i>Adapted remote learning: live video-streaming versus podcasting, a practical approach</i>	230
Kwiatkowski, M., Karpińska, M., Rekić, E.: <i>Student's multimedia presentation as a part of chemistry teachers' training: a practical approach.</i>	234
Miranowicz, N.: <i>Interactive Internet tools for practicing the correct representation of chemical compounds by means of structural formulae</i>	239
Molnár-Hamvas, L., Molnár, J., Molnár J., jr.: <i>CAPA – new development for computer aided examination at University of West Hungary</i>	244
Urbanová, K., Čtrnáctová, H.: <i>Presentation as a component of university chemistry education</i>	249
Węgrzynowicz, A., Gulińska, H.: <i>Interesting chemistry – multimedia collection of tasks</i>	254
 European and national educational programmes, projects and industry-education cooperation	
Areimo, N., Wähälä, K., Lindblom-Ylänne, S.: <i>Possibilities in applying research-based teaching in chemistry</i>	257

Babiarska, M., Grębosz, M., Krzeczowska, M., Kurek, A., Loch, J., Nowak, N., Silberring, B.: <i>From secondary school to the university.</i>	258
Capa Aydin, Y., Uzuntiryaki, E.: <i>Chemistry self-efficacy: a study of gender and major differences among college students in Turkey</i>	263
Frýžková, M., Adamec, M.: <i>Approach to implementation of science curriculum, with a special view to chemistry</i>	267
Gros, L., Drašar, P., Frankowicz, M., Maciejowska, I., Wallace, R.: <i>Equipping secondary school teachers with the tools for inspiring the next generation of young chemists</i>	272
Kloc, Z., Rzączyńska, Z.: <i>Studies of knowledge standard in general chemistry of the first year chemistry students.</i>	276
Maciejowska, I.: <i>Helping chemistry students to enter a labour market</i>	281
Merino, C., Izquierdo, M., Tortosa, M.: <i>"Doing Chemistry" in a new context</i>	285
Mimero, P.: <i>ECTNA, a major actor in European chemistry education. Eurobachelor® / Euromaster quality labels and EChemTest assessment tool to ease students mobility</i>	290
Morgil, I., Yücel, A.S., Seçken, N., Temel, S.: <i>Determination of variables affecting secondary school chemistry teachers' technology utilization skills in teaching chemistry</i>	293
Peper, M., Parchmann, I.: <i>Research-based development of courses in chemistry education for future chemistry teachers</i>	297
Priksane, A., Cedere, D.: <i>Development of organic chemistry teaching/learning environment for health and life science students</i>	302
Štrofová, J., Richtr, V.: <i>Structured study of chemistry teaching at University of West Bohemia in Pilsen</i>	306
Šulčius, A.: <i>Chemistry in Lithuanian schools and University of Technology</i>	310
Tóth, Z.: <i>Effect of instruction on the future teachers' knowledge structure regarding solving strategies of chemical problems</i>	315
<i>List of contributors</i>	320
<i>Sponsors</i>	322
