

CONTENTS

Preface	11
1. Introduction	15
References	19
2. General characterization of solvents	20
Classification of non-aqueous solvents	20
Characteristics of solvent properties	23
References	26
3. Solvent-solute interactions	27
Theoretical approaches	27
Solvation, solvation number	34
Solvation with donor and acceptor solvents	38
References	40
4. Donor-acceptor interactions. The donor and acceptor strengths of solvents	42
Empirical solvent strength scales	42
Characterization of the donor strength on the basis of the ionization energy	43
Characterization of the donor strength on the basis of the crystal field splitting	43
Characterization of the donor strength on the basis of the heat of solvation	45
Base strength towards the proton	47
Characterization of the donor strength on the basis of conductometric measurements	48
Characterization of the donor strength on the basis of polarographic measurements	49
Characterization of the donor strength by means of infrared spectroscopy	50
Characterization of the donor strength by means of NMR spectroscopy	51
Transition metal complex reference acceptors in the investigation of donor solvents	52
The Kamlet-Taft solvent basicity scale	58
Characterization of the acceptor strength on the basis of the solvatochrome effect	59
Characterization of the acceptor strength on the basis of NMR measurements	64
Characterization of the acceptor strength on the basis of kinetic measurements	66
Other solvent strength (polarity) scales	67
Intercorrelation of the various solvent strength scales	69
Study of Lewis donor-acceptor interactions and related problems	70
Effect of the parent solvent	70
Role of the experimental method	74
Effect of the reference acceptor or reference donor	75
The Drago concept	76
The Koppel-Palm concept	79
The Krygowski-Fawcett concept	81
The Gutmann-Mayer concept	83
The linear solvation energy relationship (Kamlet-Taft) concept	88
References	90

5. Experimental methods employed in the study of non-aqueous solutions of complex systems	93
Conductometry	96
Dielectrometry	99
Dielectric relaxation spectroscopy	102
UV and visible spectroscopy	104
Circular dichroism (CD) spectroscopy	110
The solvent dependence of CD	111
Infrared and Raman spectroscopy	114
Nuclear magnetic resonance (NMR) spectroscopy	127
Magnetic susceptibility examinations	136
Nuclear quadrupole resonance (NQR) spectroscopy	138
Electron paramagnetic resonance (EPR) spectroscopy	139
Mössbauer spectroscopy in frozen solutions	142
X-ray diffraction studies	161
X-ray photoelectron spectroscopy (XPS, ESCA) in rapidly frozen solutions	163
Positron annihilation and positronium chemistry	167
Pick-off annihilation and the molecular and solution structures	171
Coordination chemical aspects of positron annihilation	173
Ultrasonic velocity investigations	176
Electron spin echo modulation studies	177
References	177
6. Effect of the solvent on the structures and stabilities of metal complexes in solution	189
Effect of the donor strength	189
Effects of steric factors	190
Effect of solvation of the anion	192
Effect of solvation of the outer-sphere type	196
Formation of auto-complexes, mixed ligand complexes, DA molecular complexes and polynuclear complexes	197
Effect of the structure of the solvent	199
References	200
7. Effect of the solvent on the kinetics and mechanisms of coordination reactions	203
The effect of solvation strength (donor or acceptor strength) of solvents	205
Competitive preferential solvation (COPS) theory	211
Solvent dependence of reactions in organometallic chemistry	212
References	215
8. Interactions in solvent mixtures and their investigation	217
Interaction between the components of the solvent mixture	218
Solvation processes in solvent mixtures	222
Complex formation in solvent mixtures	225
Solvent dependence of complex stability	226
Equilibrium studies in water-dioxane solvent mixtures	231
Equilibrium studies in solvent mixtures with varying compositions	234
Equilibrium measurements in non-aqueous solvent mixtures	237
Calorimetric equilibrium studies	238
References	239
9. General suggestions for the characterization of non-aqueous solution systems	243
Analytical examination of the solution	243
Determination of moisture content	244
Determination of other impurities	246

Purification of solvents	246
Removal of the moisture content	247
Molecular sieves and their application	249
Purification procedures for some solvents	249
Characterization of solvents by their physical parameters	254
Characterization of the solvating powers of solvents	256
Characterization of solvent mixtures	258
References	259
10. Research trends in the future	260
Subject index	265
