

CONTENTS

Preface.....	2
Content.....	3
List of figures.....	5
List of tables	7
Chapter 1: Forestry and the environment	8
1.1 Forest and environmental problems.....	9
1.2 Forestry, externalities and ecosystem services.....	10
1.2.1 Positive externalities and ecosystem services.....	10
1.2.2 Negative externalities	13
1.3 Natural resources and forestry.....	15
1.4 Sustainable forestry.....	16
1.4.1 Sustainable wood production.....	17
1.4.2 Sustainable production of forest ecosystem services.....	17
Chapter 2: Economics and forestry.....	24
2.1 Forestry economics	24
2.2 History of forest economics.....	25
2.3 Specifics of forestry.....	26
2.3.1 Forest enterprise goals.....	26
2.3.2 Specifics of forestry economics.....	29
2.4 Forestry and the free market.....	31
2.4.1 Conditions required for a free market to maximize welfare	31
2.4.2 Government action to improve competition.....	32
Chapter 3: Forest microeconomics	34
3.1 Demand, supply and market mechanism.....	34
3.1.1 Demand.....	34
3.1.2 Supply.....	39
3.1.3 Market equilibrium, market share and potential.....	41
3.2 Production function.....	44
3.2.1 Short-term production	48
3.2.2 Long-term production	50
3.2.3 Production indicators.....	53
3.3 Costs in forestry	53
3.4 Market failure – externalities in forestry.....	56
Chapter 4: Investment decisions – the impact of inflation and risk.....	60
4.1 Measuring inflation.....	60
4.2 Nominal and real interest rates	63
4.3 Nominal and real rates of return – evaluation of investment projects.....	65
4.4 Alternative rates of return.....	68
4.5 Forest as capital.....	70
Net present value curve when postponing harvesting by 8 years.....	95
Gross present value of old-growth harvesting income.....	96

Chapter 5: Risk analysis	72
5.1 Risk definition and classification	72
5.1.1 Specific risks in forestry	74
5.2 Risk measurement in the field of investment decision-making in forestry.....	76
5.2.1 Present values of risky revenues.....	79
5.3 Scenarios and simulations	82
5.3.1 Monte Carlo simulation	83
5.4 Methods of expressing numerical characteristics of investment projects.....	85
5.5 Approach to risk using a benefit graph.....	87
Chapter 6: Valuation of forest ecosystem services	91
6.1 Total economic value and valuation techniques.....	91
6.2 Valuation of market ecosystem services	94
6.2.1 Valuation of assets	94
6.2.2 Appraising market value.....	97
6.2.3 Appraising damage costs.....	98
6.2.4 Non-timber influences on forest market values	99
6.3 Valuation of non-market ecosystem services.....	99
6.3.1 Why value non-market ecosystem services	99
6.3.2 Non-monetary valuation.....	100
6.3.3 Monetary valuation	103
Chapter 7: Multiple-use of forestry.....	109
7.1 Multi-use forestry concept.....	109
7.1.1 Multi-use goals.....	110
7.1.2 Management in urban forests	111
7.1.3 Use of net present value in decision making.....	112
7.2 Trade-off analysis.....	113
Chapter 8: Forestry and regional development.....	116
8.1 Regional development and its potential in forestry	116
8.1.1 Creating additional sources of income for the market implementation of forestry services.....	117
8.1.2 Job creation.....	117
8.1.3 Upgrading the qualifications of employees.....	118
8.1.4 Innovations and their use	118
8.2 Production and use of wood in the regions.....	119
8.3 Development of publicly beneficial non-productive services of the forest	120
8.4 Improving the health of forest ecosystems	120
8.5 Regional forest development programs	121
8.6 Regional information system in forestry	121
Chapter 9: Forestry in a world economy.....	124
9.1 Basic data on forest and forest management.....	124
9.1.1 Basic forest data.....	126
9.1.2 Economic benefits of forestry.....	128
9.2 Sustainable forest management	129
9.3 Forestry and climate change	130
