

Introduction	7
1. Inventory of critical raw materials in the Czech Republic	10
1.1. Geographical setting and distribution of all mineral deposits	10
1.2. Geological setting	11
1.3. Mining history including past CRM production	12
1.4. Critical raw materials with potential resources	13
1.4.1. Antimony (Sb)	13
1.4.2. Baryte-Fluorite (Ba-F)	14
1.4.3. Cobalt	15
1.4.4. Coking coal	16
1.4.5. Germanium	17
1.4.6. Graphite	18
1.4.7. Indium	19
1.4.8. Lithium	20
1.4.9. Tungsten	21
1.4.10. Other CRMs (LREE, HREE, niobium, tantalum, hafnium, scandium)	23
1.5. Conclusion – future potential and preliminary assessment of environmental impacts, social acceptance	25
2. Inventory of critical raw materials in Hungary	28
2.1. Introduction	28
2.2. Fluorite, Pátka	28
2.3. New geochemical data from the Mecsek Hard Coal Formation (MHF)	30
2.3.1. Graphite, PGE, rare earths, sulphides – Cserehát	30
2.3.2. Beryllium, Bükkzentkereszt	32
2.3.3. Bauxite – a traditional ore with potential new value	33
2.4. Critical elements in scrap and waste	34
2.4.1. Gallium in light emission diodes	35
2.4.2. Tantalum from capacitors	36
2.5. Future prospects	39
3. Inventory of critical raw materials in Poland	44
3.1. Challenges for a critical raw materials policy	44
3.1.1. Poland's raw materials policy	46
3.1.2. Characteristics of critical raw materials in Poland	49
3.2. Characteristics of coking coal as a critical raw material	54
3.2.1. National resource base for coking coal	54
3.2.2. Technology of coking coal processing	55
3.3. Coking coal on the EU list of critical raw materials	56
3.4. Conclusion	58

4. Inventory of critical raw materials in Slovakia	61
4.1. Introduction	61
4.2. The potential of critical raw materials in Slovakia.....	62
4.2.1. Magnesium metal	63
4.2.2. Silicon metal	65
4.2.3. Antimony	67
4.2.4. Tungsten	69
4.2.5. Cobalt.....	71
4.2.6. Graphite.....	73
4.2.7. Baryte	74
4.2.8. Rare earth elements	75
4.3. Conclusion.....	75
5. Roadmap for critical raw materials policy in V4 countries.....	78
Abstract.....	82
