

Introduction

- Why Study Human Embryology?, 1
- Periods of Human Embryology, 3
- Period of Egg and Embryo: Summary of Main Events, 5
- Phases of Human Embryology, 7
- Body Axes: Understanding Embryonic Coordinates, 9
- Want to Learn More?, 10

Chapter 1

- Gametogenesis, Fertilization, and First Week, 13
 - Primordial Germ Cells, 15
 - Gametogenesis, 16
 - Spermatogenesis, 21
 - Oogenesis, 23
 - Ovulation, 25
 - Menstrual Cycle, 29
 - Fertilization, 32
 - Cleavage, 32
 - End of First Week: Initiating Implantation, 35

Chapter 2

- Second Week: Becoming Bilaminar and Fully Implanting, 41
 - Becoming Fully Implanted, 43
 - Embryoblast Reorganizes into Epiblast and Hypoblast, 44
 - Development of Amniotic Cavity, 44
 - Development of Yolk Sac and Chorionic Cavity, 44
 - Uteroplacental Circulatory System Begins to Develop
 - During the Second Week, 49

Chapter 3

- Third Week: Becoming Trilaminar and Establishing Body Axes, 55
 - Overview of Gastrulation: Forming Three Primary Germ Layers and Body Axes, 57
 - Specifics of Gastrulation: Moving Cells to New Locations and Making Organ Rudiments That Undergo Inductive Interactions, 62
 - Formation of Neural Plate, 73
 - Caudal Elongation of Embryo, 75
 - Primary Versus Secondary Body Development, 77

Chapter 4

- Fourth Week: Forming the Embryo, 78
 - Tube-Within-A-Tube Body Plan Arises Through Body Folding, 79
 - Neurulation: Establishing Neural Tube, Rudiment of Central Nervous System, 83
 - Secondary Neurulation, 89
 - Cranial-Caudal Regionalization of Neural Tube, 89
 - Neural Crest Cells, 89
 - Somite Differentiation: Forming Dermamyotome and Sclerotome, 101

Chapter 5

- Principles and Mechanisms of Morphogenesis and Dysmorphogenesis, 104
 - Principles of Morphogenesis and Dysmorphogenesis, 104
 - Animal Models, 105
 - Using Animal Models to Predict Human Risk, 108
 - Experimental Techniques, 108
 - Signaling Pathways, 116
 - Embryonic Stem Cells, Organoids, and Cloning, 125

Chapter 6

- Fetal Development and the Fetus as a Patient, 129
 - During Fetal Period, Embryonic Organ Systems Mature and Fetus Grows, 131
 - Development of Placenta, 131
 - Development of Umbilical Cord, 134
 - Exchange of Substances Between Maternal and Fetal
 - Blood in Placenta, 134
 - Intrauterine Growth Restriction, 138
 - Maternal Diabetes and Obesity, 138
 - Placenta Produces Several Important Hormones, 139
 - Production and Resorption of Amniotic Fluid, 139
 - Twinning, 140
 - Prenatal Diagnosis Assesses Health of Unborn, 140
 - Treating Fetus in Utero, 146
 - Fetal Cord Blood and Stem Cells, 148
 - Preterm Birth, 149

Chapter 7

- Development of the Skin and Its Derivatives, 150
 - Origin of Epidermis and Dermis of Skin, 151
 - Development of Skin Derivatives, 157

Chapter 8

- Development of the Musculoskeletal System, 166
 - Tissue Origins and Differentiation of Musculoskeletal System, 167
 - Somites Differentiate into Sclerotome and Dermamyotome, 169
 - Resegmentation of Sclerotomes, 172
 - Myotomes Develop at Segmental Levels, 179
 - Long Bone and Joint Development, 181
 - Development of Limb Muscles, 185

Chapter 9

- Development of the Central Nervous System, 191
 - Structural Divisions of Nervous System, 194
 - Functional Divisions of Nervous System, 194
 - Primary Brain Vesicles Subdivide to Form Secondary Brain Vesicles, 194

- Formation of Brain Flexures, 196
- Cytodifferentiation of Neural Tube, 198
- Differentiation of Spinal Cord, 198
- Differentiation of Brain, 198
- Growth of Brain, 226

Chapter 10

- Development of the Peripheral Nervous System, 228
 - Structural Divisions of Nervous System, 230
 - Functional Divisions of Nervous System, 230
- Origin of PNS, 231
- Development of Trunk PNS, 233
- Development of Cranial PNS, 241
- Differences in Preganglionic and Postganglionic Fiber Length Between Parasympathetic and Sympathetic Divisions of Autonomic Nervous System, 244

Chapter 11

- Development of the Respiratory System and Body Cavities, 245
 - Development of Lungs and Respiratory Tree, 246
 - Partitioning of Coelom and Formation of Diaphragm, 253

Chapter 12

- Development of the Heart, 261
 - Establishing Cardiac Lineage, 263
 - Formation of Primary Heart Tube, 264
 - Cardiac Looping, 271
 - Formation of Primitive Blood Vessels Associated With the Endocardial Tube, 273
 - Coordinated Remodeling of Heart Tube and Primitive Vasculature Produces Systemic and Pulmonary Circulations, 274
 - Septation of Heart, 275
 - Development of Pacemaker and Conduction System, 290
 - Development of Epicardium and Coronary Vasculature, 292

Chapter 13

- Development of the Vasculature, 298
 - Formation of Blood and Vasculature Begins Early in Third Week, 300
 - Vasculogenesis and Angiogenesis, 300
 - Arteries Versus Veins, 306
 - Development of Aortic Arch Arteries, 308
 - Dorsal Aorta Develops Ventral, Lateral, and Posterolateral Branches, 314
 - Primitive Embryonic Venous System Is Divided into Vitelline, Umbilical, and Cardinal Systems, 318
 - Development of Lymphatic System, 327
 - Dramatic Changes Occur in Circulatory System at Birth, 328

Chapter 14

- Development of the Gastrointestinal Tract, 335
 - Body Folding, 337
 - Dorsal Mesentery Initially Suspends Abdominal Gut Tube, 337
 - Three Regions of Primitive Gut, 338
 - Development of Abdominal Foregut, 339
 - Spleen Development, 344
 - Ventral Mesentery Derivatives, 346
 - Midgut Development, 350
 - Cytodifferentiation of Gut Endodermal Epithelium, 352
 - Development of Outer Intestinal Wall and Its Innervation, 358
 - Hindgut Development, 361

Chapter 15

- Development of the Urinary System, 368
 - Three Nephric Systems Arise During Development, 368
 - Relocation of Kidneys, 378
 - Contributions of Hindgut Endoderm to Urinary Tract, 380
 - Development of Suprarenal Gland, 384

Chapter 16

- Development of the Reproductive System, 386
 - Reproductive System Arises With Urinary System, 388
 - In Presence of Y Chromosome, Male Development Occurs, 388
 - In Absence of Y Chromosome, Female Development Occurs, 395
 - Development of External Genitalia, 402
 - Suspension of Mesonephric-Gonadal Complex Within Abdomen, 405
 - Development of Inguinal Canals, 405
 - Descent of Testes, 405
 - Ovaries Become Suspended in Broad Ligament of Uterus and Are Held High in Abdominal Cavity by Cranial Suspensory Ligaments, 414

Chapter 17

- Development of the Pharyngeal Apparatus and Face, 419
 - Origin of Skull, 421
 - Development of Pharyngeal Arches, 430
 - Development of Face, 440
 - Development of Nasal and Oral Cavities, 443
 - Development of Sinuses, 448
 - Fate of Pharyngeal Clefts, 448
 - Pharyngeal Arches Give Rise to Tongue, 449
 - Development of Thyroid Gland, 451
 - Development of Pharyngeal Pouches, 453
 - Development of Salivary Glands, 454
 - Development of Teeth, 456
