

Contents

1 • INTRODUCTION	1
1.1 Nature and Scope of Chemical Kinetics	1
1.2 Nature and Scope of Chemical Reaction Engineering	1
1.3 Kinetics and Chemical Reaction Engineering	2
1.4 Aspects of Kinetics	3
1.4.1 Rate of Reaction—Definition	3
1.4.2 Parameters Affecting Rate of Reaction: The Rate Law	4
1.4.3 Measurement of Rate of Reaction—Preliminary	5
1.4.4 Kinetics and Chemical Reaction Stoichiometry	6
1.4.5 Kinetics and Thermodynamics/Equilibrium	14
1.4.6 Kinetics and Transport Processes	15
1.5 Aspects of Chemical Reaction Engineering	15
1.5.1 Reactor Design and Analysis of Performance	15
1.5.2 Parameters Affecting Reactor Performance	16
1.5.3 Balance Equations	16
1.5.4 An Example of an Industrial Reactor	18
1.6 Dimensions and Units	19
1.7 Plan of Treatment in Following Chapters	21
1.7.1 Organization of Topics	21
1.7.2 Use of Computer Software for Problem Solving	21
1.8 Problems for Chapter 1	22
2 • KINETICS AND IDEAL REACTOR MODELS	25
2.1 Time Quantities	25
2.2 Batch Reactor (BR)	26
2.2.1 General Features	26
2.2.2 Material Balance; Interpretation of r_i	27
2.3 Continuous Stirred-Tank Reactor (CSTR)	29
2.3.1 General Features	29
2.3.2 Material Balance; Interpretation of r_i	31
2.4 Plug-Flow Reactor (PFR)	33
2.4.1 General Features	33
2.4.2 Material Balance; Interpretation of r_i	34
2.5 Laminar-Flow Reactor (LFR)	36
2.6 Summary of Results for Ideal Reactor Models	38
2.7 Stoichiometric Table	39
2.8 Problems for Chapter 2	40
3 • EXPERIMENTAL METHODS IN KINETICS: MEASUREMENT OF RATE OF REACTION	42
3.1 Features of a Rate Law: Introduction	42
3.1.1 Separation of Effects	42
3.1.2 Effect of Concentration: Order of Reaction	42
3.1.3 Effect of Temperature: Arrhenius Equation; Activation Energy	44

3.2 Experimental Measurements: General Considerations	45
3.3 Experimental Methods to Follow the Extent of Reaction	46
3.3.1 <i>Ex-situ</i> and <i>In-situ</i> Measurement Techniques	46
3.3.2 Chemical Methods	46
3.3.3 Physical Methods	47
3.3.4 Other Measured Quantities	48
3.4 Experimental Strategies for Determining Rate Parameters	48
3.4.1 Concentration-Related Parameters: Order of Reaction	49
3.4.2 Experimental Aspects of Measurement of Arrhenius Parameters A and E_A	57
3.5 Notes on Methodology for Parameter Estimation	57
3.6 Problems for Chapter 3	61
 4 • DEVELOPMENT OF THE RATE LAW FOR A SIMPLE SYSTEM	 64
4.1 The Rate Law	64
4.1.1 Form of Rate Law Used	64
4.1.2 Empirical versus Fundamental Rate Laws	65
4.1.3 Separability versus Nonseparability of Effects	66
4.2 Gas-Phase Reactions: Choice of Concentration Units	66
4.2.1 Use of Partial Pressure	66
4.2.2 Rate and Rate Constant in Terms of Partial Pressure	67
4.2.3 Arrhenius Parameters in Terms of Partial Pressure	68
4.3 Dependence of Rate on Concentration	69
4.3.1 First-Order Reactions	69
4.3.2 Second-Order Reactions	71
4.3.3 Third-Order Reactions	72
4.3.4 Other Orders of Reaction	75
4.3.5 Comparison of Orders of Reaction	75
4.3.6 Product Species in the Rate Law	78
4.4 Dependence of Rate on Temperature	79
4.4.1 Determination of Arrhenius Parameters	79
4.4.2 Arrhenius Parameters and Choice of Concentration Units for Gas-Phase Reactions	80
4.5 Problems for Chapter 4	80
 5 • COMPLEX SYSTEMS	 87
5.1 Types and Examples of Complex Systems	87
5.1.1 Reversible (Opposing) Reactions	87
5.1.2 Reactions in Parallel	88
5.1.3 Reactions in Series	88
5.1.4 Combinations of Complexities	88
5.1.5 Compartmental or Box Representation of Reaction Network	89
5.2 Measures of Reaction Extent and Selectivity	90
5.2.1 Reaction Stoichiometry and Its Significance	90
5.2.2 Fractional Conversion of a Reactant	91
5.2.3 Yield of a Product	91
5.2.4 Overall and Instantaneous Fractional Yield	92
5.2.5 Extent of Reaction	93
5.2.6 Stoichiometric Table for Complex System	93
5.3 Reversible Reactions	94
5.3.1 Net Rate and Forms of Rate Law	94
5.3.2 Thermodynamic Restrictions on Rate and on Rate Laws	95
5.3.3 Determination of Rate Constants	97
5.3.4 Optimal T for Exothermic Reversible Reaction	99
5.4 Parallel Reactions	100
5.5 Series Reactions	103

5.6	Complexities Combined	106
5.6.1	Concept of Rate-Determining Step (<i>rds</i>)	106
5.6.2	Determination of Reaction Network	106
5.7	Problems for Chapter 5	108
6 •	FUNDAMENTALS OF REACTION RATES	115
6.1	Preliminary Considerations	115
6.1.1	Relating to Reaction-Rate Theories	115
6.1.2	Relating to Reaction Mechanisms and Elementary Reactions	116
6.2	Description of Elementary Chemical Reactions	117
6.2.1	Types of Elementary Reactions	117
6.2.2	General Requirements for Elementary Chemical Reactions	120
6.3	Energy in Molecules	120
6.3.1	Potential Energy in Molecules—Requirements for Reaction	120
6.3.2	Kinetic Energy in Molecules	126
6.4	Simple Collision Theory of Reaction Rates	128
6.4.1	Simple Collision Theory (SCT) of Bimolecular Gas-Phase Reactions	129
6.4.2	Collision Theory of Unimolecular Reactions	134
6.4.3	Collision Theory of Bimolecular Combination Reactions; Termolecular Reactions	137
6.5	Transition State Theory (TST)	139
6.5.1	General Features of the TST	139
6.5.2	Thermodynamic Formulation	141
6.5.3	Quantitative Estimates of Rate Constants Using TST with Statistical Mechanics	143
6.5.4	Comparison of TST with SCT	145
6.6	Elementary Reactions Involving Other Than Gas-Phase Neutral Species	146
6.6.1	Reactions in Condensed Phases	146
6.6.2	Surface Phenomena	147
6.6.3	Photochemical Elementary Reactions	149
6.6.4	Reactions in Plasmas	150
6.7	Summary	151
6.8	Problems for Chapter 6	152
7 •	HOMOGENEOUS REACTION MECHANISMS AND RATE LAWS	154
7.1	Simple Homogeneous Reactions	155
7.1.1	Types of Mechanisms	155
7.1.2	Open-Sequence Mechanisms: Derivation of Rate Law from Mechanism	155
7.1.3	Closed-Sequence Mechanisms; Chain Reactions	157
7.1.4	Photochemical Reactions	163
7.2	Complex Reactions	164
7.2.1	Derivation of Rate Laws	164
7.2.2	Computer Modeling of Complex Reaction Kinetics	165
7.3	Polymerization Reactions	165
7.3.1	Chain-Reaction Polymerization	166
7.3.2	Step-Change Polymerization	168
7.4	Problems for Chapter 7	170
8 •	CATALYSIS AND CATALYTIC REACTIONS	176
8.1	Catalysis and Catalysts	176
8.1.1	Nature and Concept	176
8.1.2	Types of Catalysis	178
8.1.3	General Aspects of Catalysis	179
8.2	Molecular Catalysis	182
8.2.1	Gas-Phase Reactions	182
8.2.2	Acid-Base Catalysis	183

8.2.3 Other Liquid-Phase Reactions	186
8.2.4 Organometallic Catalysis	186
8.3 Autocatalysis	187
8.4 Surface Catalysis: Intrinsic Kinetics	191
8.4.1 Surface-Reaction Steps	191
8.4.2 Adsorption Without Reaction: Langmuir Adsorption Isotherm	192
8.4.3 Langmuir-Hinshelwood (LH) Kinetics	195
8.4.4 Beyond Langmuir-Hinshelwood Kinetics	197
8.5 Heterogeneous Catalysis: Kinetics in Porous Catalyst Particles	198
8.5.1 General Considerations	198
8.5.2 Particle Density and Voidage (Porosity)	199
8.5.3 Modes of Diffusion; Effective Diffusivity	199
8.5.4 Particle Effectiveness Factor η	201
8.5.5 Dependence of η on Temperature	210
8.5.6 Overall Effectiveness Factor η_o	212
8.6 Catalyst Deactivation and Regeneration	214
8.6.1 Fouling	214
8.6.2 Poisoning	215
8.6.3 Sintering	215
8.6.4 How Deactivation Affects Performance	216
8.6.5 Methods for Catalyst Regeneration	216
8.7 Problems for Chapter 8	218
9 • MULTIPHASE REACTING SYSTEMS	224
9.1 Gas-Solid (Reactant) Systems	224
9.1.1 Examples of Systems	224
9.1.2 Constant-Size Particle	225
9.1.3 Shrinking Particle	237
9.2 Gas-Liquid Systems	239
9.2.1 Examples of Systems	239
9.2.2 Two-Film Mass-Transfer Model for Gas-Liquid Systems	240
9.2.3 Kinetics Regimes for Two-Film Model	242
9.3 Intrinsic Kinetics of Heterogeneous Reactions Involving Solids	255
9.4 Problems for Chapter 9	257
10 • BIOCHEMICAL REACTIONS: ENZYME KINETICS	261
10.1 Enzyme Catalysis	261
10.1.1 Nature and Examples of Enzyme Catalysis	261
10.1.2 Experimental Aspects	263
10.2 Models of Enzyme Kinetics	264
10.2.1 Michaelis-Menten Model	264
10.2.2 Briggs-Haldane Model	266
10.3 Estimation of K_m and V_{max}	267
10.3.1 Linearized Form of the Michaelis-Menten Equation	267
10.3.2 Linearized Form of the Integrated Michaelis-Menten Equation	269
10.3.3 Nonlinear Treatment	269
10.4 Inhibition and Activation in Enzyme Reactions	269
10.4.1 Substrate Effects	270
10.4.2 External Inhibitors and Activators	272
10.5 Problems for Chapter 10	276
11 • PRELIMINARY CONSIDERATIONS IN CHEMICAL REACTION ENGINEERING	279
11.1 Process Design and Mechanical Design	279
11.1.1 Process Design	279
11.1.2 Mechanical Design	283

11.2 Examples of Reactors for Illustration of Process Design Considerations	283
11.2.1 Batch Reactors	283
11.2.2 Stirred-Tank Flow Reactors	284
11.2.3 Tubular Flow Reactors	284
11.2.4 Fluidized-Bed Reactors	290
11.2.5 Other Types of Reactors	291
11.3 Problems for Chapter 11	292
12 • BATCH REACTORS (BR)	294
12.1 Uses of Batch Reactors	294
12.2 Batch Versus Continuous Operation	295
12.3 Design Equations for a Batch Reactor	296
12.3.1 General Considerations	296
12.3.2 Isothermal Operation	300
12.3.3 Nonisothermal Operation	304
12.3.4 Optimal Performance for Maximum Production Rate	307
12.4 Semibatch and Semicontinuous Reactors	309
12.4.1 Modes of Operation: Semibatch and Semicontinuous Reactors	309
12.4.2 Advantages and Disadvantages (Semibatch Reactor)	310
12.4.3 Design Aspects	311
12.5 Problems for Chapter 12	313
13 • IDEAL FLOW	317
13.1 Terminology	317
13.2 Types of Ideal Flow; Closed and Open Vessels	318
13.2.1 Backmix Flow (BMF)	318
13.2.2 Plug Flow (PF)	318
13.2.3 Laminar Flow (LF)	318
13.2.4 Closed and Open Vessels	318
13.3 Characterization of Flow By Age-Distribution Functions	319
13.3.1 Exit-Age Distribution Function E	319
13.3.2 Cumulative Residence-Time Distribution Function F	321
13.3.3 Washout Residence-Time Distribution Function W	322
13.3.4 Internal-Age Distribution Function I	322
13.3.5 Holdback H	322
13.3.6 Summary of Relationships Among Age-Distribution Functions	322
13.3.7 Moments of Distribution Functions	323
13.4 Age-Distribution Functions for Ideal Flow	325
13.4.1 Backmix Flow (BMF)	325
13.4.2 Plug Flow (PF)	327
13.4.3 Laminar Flow (LF)	330
13.4.4 Summary of Results for Ideal Flow	332
13.5 Segregated Flow	332
13.6 Problems for Chapter 13	333
14 • CONTINUOUS STIRRED-TANK REACTORS (CSTR)	335
14.1 Uses of a CSTR	336
14.2 Advantages and Disadvantages of a CSTR	336
14.3 Design Equations for a Single-Stage CSTR	336
14.3.1 General Considerations; Material and Energy Balances	336
14.3.2 Constant-Density System	339
14.3.3 Variable-Density System	344
14.3.4 Existence of Multiple Stationary States	347
14.4 Multistage CSTR	355
14.4.1 Constant-Density System; Isothermal Operation	357
14.4.2 Optimal Operation	358
14.5 Problems for Chapter 14	361
