

CONTENTS

PREFACE	xv
BIOGRAPHICAL SKETCHES	xix
1 INTRODUCTION AND HISTORICAL OVERVIEW	1
1.1 Mechanical Failure Modes / 1	
1.2 Importance of Fatigue Considerations in Design / 3	
1.3 Historical Overview of Fatigue / 5	
1.4 Summary / 9	
1.5 Dos and Don'ts in Design / 10	
1.6 Biographical Sketches / 10	
References / 16	
Problems / 17	
2 FATIGUE DESIGN METHODS	19
2.1 Strategies in Fatigue Design / 19	
2.1.1 The In-House Tool / 21	
2.1.2 The New Model / 22	
2.1.3 The New Product / 22	
2.1.4 Design to Code / 22	
2.2 Fatigue Design Criteria / 23	
2.2.1 Infinite-Life Design / 23	
2.2.2 Safe-Life Design / 23	

2.2.3	Fail-Safe Design / 24
2.2.4	Damage-Tolerant Design / 24
2.3	Analysis and Testing / 25
2.4	Probabilistic Design and Reliability / 28
2.5	CAE and Digital Prototyping / 28
2.6	In-Service Inspection and Acquisition of Relevant Experience / 29
2.7	Summary / 30
2.8	Dos and Don'ts in Design / 30
	References / 31
	Problems / 31

3 MACRO/MICRO ASPECTS OF FATIGUE OF METALS 33

3.1	Fatigue Fracture Surfaces and Macroscopic Features / 34
3.2	Fatigue Mechanisms and Microscopic Features / 43
3.3	Summary / 55
3.4	Dos and Don'ts in Design / 56
	References / 56
	Problems / 57

4 FATIGUE TESTS AND THE STRESS–LIFE (S–N) APPROACH 59

4.1	Fatigue Loading, Test Machines, and Specimens / 59
4.1.1	Fatigue Loading / 59
4.1.2	Fatigue Test Machines / 62
4.1.3	Fatigue Test Specimens / 65
4.2	Stress–Life (S – N) Curves / 67
4.2.1	General S – N Behavior / 67
4.2.2	Fatigue Limit Under Fully Reversed Uniaxial Stressing / 70
4.3	Mean Stress Effects on S – N Behavior / 74
4.4	Factors Influencing S – N Behavior / 79
4.4.1	Microstructure / 79
4.4.2	Size Effects / 80
4.4.3	Surface Finish / 80
4.4.4	Frequency / 82
4.5	S – N Curve Representation and Approximations / 83
4.6	Example of Life Estimation Using the S – N Approach / 86

- 4.7 Summary / 88
- 4.8 Dos and Don'ts in Design / 89
- References / 89
- Problems / 90

5 CYCLIC DEFORMATION AND THE STRAIN–LIFE (ϵ – N) APPROACH 93

- 5.1 Monotonic Tension Test and Stress–Strain Behavior / 93
- 5.2 Strain-Controlled Test Methods / 98
- 5.3 Cycle-Dependent Material Deformation and Cyclic Stress–Strain Behavior / 98
- 5.4 Strain-Based (ϵ – N) Approach to Life Estimation / 105
- 5.5 Determination of Strain–Life Fatigue Properties / 111
- 5.6 Mean Stress Effects / 113
- 5.7 Surface Finish and Other Factors Influencing Strain–Life Behavior / 115
- 5.8 Summary / 116
- 5.9 Dos and Don'ts in Design / 117
- References / 118
- Problems / 119

6 FUNDAMENTALS OF LEFM AND APPLICATIONS TO FATIGUE CRACK GROWTH 122

- 6.1 LEFM Concepts / 123
 - 6.1.1 Loading Modes / 123
 - 6.1.2 Stress Intensity Factor, K / 124
 - 6.1.3 K Expressions for Common Cracked Members / 126
 - 6.1.4 Superposition for Combined Mode I Loading / 132
- 6.2 Crack Tip Plastic Zone / 133
- 6.3 Fracture Toughness— K_c , K_{Ic} / 136
- 6.4 Fatigue Crack Growth, da/dN – ΔK / 142
 - 6.4.1 Sigmoidal da/dN – ΔK Curve / 144
 - 6.4.2 Constant Amplitude Fatigue Crack Growth Test Methods / 146
 - 6.4.3 da/dN – ΔK for $R = 0$ / 147
 - 6.4.4 Crack Growth Life Integration Example with No Mean Stress Effects / 151
- 6.5 Mean Stress Effects / 155

6.6	Cyclic Plastic Zone Size / 160
6.7	Crack Closure / 162
6.8	Small Fatigue Cracks and LEFM Limitations / 165
6.9	Plasticity Extension of LEFM and Elastic-Plastic Fracture Mechanics / 170
6.10	Summary / 174
6.11	Dos and Don'ts in Design / 175
	References / 176
	Problems / 180

7 NOTCHES AND THEIR EFFECTS **186**

7.1	Concentrations and Gradients of Stress and Strain / 187
7.2	<i>S–N</i> Approach for Notched Members / 196
7.2.1	Notch Sensitivity and the Fatigue Notch Factor, K_f / 196
7.2.2	Effects of Stress Level on Notch Factor / 199
7.2.3	Mean Stress Effects and Haigh Diagrams / 200
7.2.4	Example of Life Estimation with the <i>S–N</i> Approach / 206
7.3	Notch Strain Analysis and the Strain–Life Approach / 209
7.3.1	Notch Stresses and Strains / 210
7.3.2	Neuber's Rule / 212
7.3.3	Strain Energy Density or Glinka's Rule / 215
7.3.4	Plane Stress versus Plane Strain / 217
7.3.5	Example of Life Estimation Using the Strain–Life Approach / 218
7.4	Applications of Fracture Mechanics to Crack Growth at Notches / 226
7.5	The Two-Stage Approach to Fatigue Life Estimation / 231
7.6	Summary / 234
7.7	Dos and Don'ts in Design / 236
	References / 237
	Problems / 239

8 RESIDUAL STRESSES AND THEIR EFFECTS ON FATIGUE RESISTANCE **243**

8.1	Examples / 243
8.2	Production of Residual Stresses and Fatigue Resistance / 245
8.2.1	Mechanical Methods / 245
8.2.2	Thermal Methods / 252

- 8.2.3 Plating / 254
- 8.2.4 Machining / 256
- 8.3 Relaxation of Residual Stresses / 257
- 8.4 Measurement of Residual Stresses / 259
- 8.5 Stress Intensity Factors for Residual Stresses / 261
- 8.6 Summary / 264
- 8.7 Dos and Don'ts in Design / 265
- References / 266
- Problems / 267

9 FATIGUE FROM VARIABLE AMPLITUDE LOADING 270

- 9.1 Spectrum Loads and Cumulative Damage / 270
- 9.2 Damage Quantification and the Concepts of Damage Fraction and Accumulation / 274
- 9.3 Cumulative Damage Theories / 274
 - 9.3.1 Palmgren-Miner Linear Damage Rule / 274
 - 9.3.2 Nonlinear Damage Theories / 277
- 9.4 Load Interaction and Sequence Effects / 277
- 9.5 Cycle Counting Methods / 281
 - 9.5.1 Rainflow Method / 282
 - 9.5.2 Other Cycle Counting Methods / 286
- 9.6 Life Estimation Using the Stress–Life Approach / 291
- 9.7 Life Estimation Using the Strain–Life Approach / 295
- 9.8 Crack Growth and Life Estimation Models / 299
- 9.9 Simulating Service Histories in the Laboratory and Digital Prototyping / 308
 - 9.9.1 Laboratory Test Methods / 308
 - 9.9.2 Digital Prototyping / 310
- 9.10 Summary / 311
- 9.11 Dos and Don'ts in Design / 312
- References / 313
- Problems / 315

10 MULTIAXIAL STRESSES 318

- 10.1 States of Stress and Strain and Proportional versus Nonproportional Loading / 319
- 10.2 Yielding and Plasticity in Multiaxial Fatigue / 320
- 10.3 Stress-Based Criteria / 323
 - 10.3.1 Equivalent Stress Approaches / 323
 - 10.3.2 Sines Method / 325
 - 10.3.3 Examples Using the Stress–Life Approach / 326

10.4	Strain-Based, Energy-Based, and Critical Plane Approaches / 328
10.4.1	Strain-Based and Energy-Based Approaches / 328
10.4.2	Critical Plane Approaches and the Fatemi-Socie Model / 329
10.4.3	Example of Nonproportional Loading / 333
10.5	Fracture Mechanics Models for Fatigue Crack Growth / 337
10.6	Notch Effects and Variable Amplitude Loading / 338
10.7	Summary / 339
10.8	Dos and Don'ts in Design / 340
	References / 341
	Problems / 342

11 ENVIRONMENTAL EFFECTS 344

11.1	Corrosion Fatigue / 345
11.1.1	Stress Corrosion Cracking/Environment-Assisted Cracking / 345
11.1.2	Stress-Life ($S-N$) Behavior / 347
11.1.3	Strain-Life ($\epsilon-N$) Behavior / 350
11.1.4	Fatigue Crack Growth ($da/dN-\Delta K$) Behavior / 351
11.1.5	Protection Against Corrosion Fatigue / 353
11.1.6	Corrosion Fatigue Life Estimation / 355
11.1.7	Summary / 355
11.1.8	Dos and Don'ts in Design / 356
11.2	Fretting Fatigue / 356
11.2.1	Mechanisms of Fretting Fatigue / 359
11.2.2	Influence of Variables / 361
11.2.3	Summary / 363
11.2.4	Dos and Don'ts in Design / 363
11.3	Low-Temperature Fatigue / 364
11.3.1	Monotonic Behavior at Low Temperatures / 364
11.3.2	Stress-life ($S-N$) Behavior / 365
11.3.3	Strain-life ($\epsilon-N$) Behavior / 366
11.3.4	Fatigue Crack Growth ($da/dN-\Delta K$) Behavior / 368
11.3.5	Variable Amplitude Behavior and Fatigue Life Estimation / 370
11.3.6	Summary / 372
11.3.7	Dos and Don'ts in Design / 372

11.4	High-Temperature Fatigue / 373
11.4.1	Creep Deformation / 374
11.4.2	Stress–Strain Behavior Under Cyclic Loading and Hold Times / 375
11.4.3	Stress–life ($S-N$) / Creep Behavior / 376
11.4.4	Strain–life ($\epsilon-N$) Behavior / 381
11.4.5	Fatigue Crack Growth ($da/dN-\Delta K$) Behavior / 386
11.4.6	Summary / 391
11.4.7	Dos and Don'ts in Design / 391
11.5	Neutron Irradiation / 391
	References / 394
	Problems / 399

12 FATIGUE OF WELDMENTS 401

12.1	Weldment Nomenclature and Discontinuities / 402
12.2	Constant Amplitude Fatigue Behavior of Weldments / 406
12.2.1	Stress–Life ($S-N$) Behavior / 406
12.2.2	Strain–Life ($\epsilon-N$) Behavior / 408
12.2.3	Crack Growth ($da/dN-\Delta K$) Behavior / 409
12.2.4	Spot Welds / 412
12.3	Improving Weldment Fatigue Resistance / 412
12.4	Weldment Fatigue Life Estimation / 414
12.4.1	General Weldment Fatigue Life Models / 414
12.4.2	Weldment Fatigue Design Codes and Standards / 416
12.5	Summary / 423
12.6	Dos and Don'ts in Design / 424
	References / 424
	Problems / 426

13 STATISTICAL ASPECTS OF FATIGUE 428

13.1	Definitions and Quantification of Data Scatter / 429
13.2	Probability Distributions / 429
13.2.1	Normal and Log-Normal Distributions / 430
13.2.2	Weibull Distributions / 433
13.2.3	Estimating Low Probabilities of Failure / 435
13.3	Tolerance Limits / 436
13.4	Regression Analysis of Fatigue Data / 438
13.5	Reliability Analysis / 440

13.6 Example Problem Using the Weibull Distribution / 441

13.7 Summary / 443

13.8 Dos and Don'ts in Design / 443

References / 444

Problems / 444

APPENDIX MATERIAL PROPERTIES 447

Table A.1 Monotonic Tensile Properties and Fully Reversed, Bending Unnotched Fatigue Limits, S_f , of Selected Engineering Alloys / 448

Table A.2 Monotonic, Cyclic, and Strain-Life Properties of Selected Engineering Alloys / 450

Table A.3 Plane Strain Fracture Toughness, K_{Ic} , for Selected Engineering Alloys (Plate Stock, L-T Direction Unless Otherwise Specified) / 452

Table A.4 Fatigue Crack Growth Threshold, ΔK_{th} , for Selected Engineering Alloys / 454

Table A.5 Corrosion Fatigue Behavior in Water or Salt Water for Life $\geq 10^7$ Cycles for Selected Engineering Alloys / 455
