

CONTENTS

Contents	5
Preface.....	7
I. DETERIORATION	11
Analyzing of corrosion during static strain with use of control charts	13
Microscopic observation of degradation processes of the steel cord - elastomer interaction in tire casings	19
Aspects of selected properties of polymer composites with natural fibers.....	25
Improvement of the fatigue endurance of steel 50CrV4.....	39
Influence of used steel on quality and tolerance of zinc coating to corrosion.....	47
II. DEPENDABILITY	53
Fault collapsing and test generation for a circuit	55
UAV future development.....	63
Development trends in military mobile technics wheel chassis construction.....	77
Design of procedure battle damage assessment and repair.....	85
Modelling of costs for maintenance from a point of risks.....	95
The development of an evaluation methodology and optimization tool for air transport systems taking into account reliability aspect of the logistics processes and operational equipment – research project.....	103
Improvement of reliability of an electric sliding contact.....	113
Assessing of life cycle costs of military vehicles	121
For and against - FPV flying.....	127
Critical infrastructure safety management.....	137
Concept for uav's maintenance publication- and operation manual system; uav/uas categorization	149
Ensuring availability of weapon systems through resupply operations.....	159
Model of flooded area	167
Tools of reliability testing and analysis	175
Tactical models based on a multi-depot vehicle routing problem	187

Contribution to reliability test design	195
III. DIAGNOSTICS	203
Using diagnostics to detect failures in complex technical systems	205
Occurrence of phthalic acid esters in operating fluids of vehicles and vegetable oils	213
Development, assesment and toxicity of fluids for screenwasher	221
Advanced crankshaft for low power losses	229
Vibration signal measurement and processing	237
To internal dynamics of gear systems with split power flow	245
Pollyester composites reinforced with corn, hop and sunflower fibres	259
Polymer composite materials reinforced with natural fibers	267
Vibration diagnostics gearbox of the passenger car	277
Changes in kinematic viscosity and shear stress during the lifetime of the engine oil	283
Methodology for improving the performance of emission inspection of gasoline engines with on-board diagnostics OBD	289
Rotating machinery vibration signals and influence factors	299
Mathematic model of the truck	307
Determination of material characteristics of chosen variously old tire casings	315
Armored cars	323
List of authors	329
