CONTENTS

Chapter 1. Preliminary observations **1**

1.1. Simple examples of tensors in physics and geometry, 1
1.2. Vector components in curvilinear coordinate systems, 6
1.3. Some elementary properties of determinants, 13
Problems, 16

Chapter 2. Affine tensor algebra in Euclidean geometry **18**

2.1. Orthogonal transformations in E_3, 19
2.2. Transformation properties of affine vector components and related concepts, 22
2.3. General affine tensor algebra, 31
2.4. Transition to nonlinear coordinate transformations, 36
2.5. Digression: Parallel vector fields in E_n referred to curvilinear coordinates, 45
Problems, 50

Chapter 3. Tensor analysis on manifolds **54**

3.1. Coordinate transformations on differentiable manifolds, 55
3.2. Tensor algebra on manifolds, 58
3.3. Tensor fields and their derivatives, 65
3.4. Absolute differentials of tensor fields, 72
3.5. Partial covariant differentiation, 75
3.6. Repeated covariant differentiation, 81
3.7. Parallel vector fields, 84
3.8. Properties of the curvature tensor, 91
Problems, 95

Chapter 4. Additional topics from the tensor calculus **101**

4.1. Relative tensors, 102
4.2. The numerical relative tensors, 109
4.3. Normal coordinates, 117
4.4. The Lie derivative, 121
Problems, 126

Chapter 5. The calculus of differential forms **130**

5.1. The exterior (or wedge) product of differential forms, 131
5.2. Exterior derivatives of p-forms, 136
5.3. The lemma of Poincaré and its converse, 141
5.4. Systems of total differential equations, 147
5.5. The theorem of Stokes, 156
5.6. Curvature forms on differentiable manifolds, 164
5.7. Subspaces of a differentiable manifold, 170
Problems, 175

Chapter 6. Invariant problems in the calculus of variations **181**

6.1. The simplest problem in the calculus of variations; invariance requirements, 182
6.2. Fields of extremals, 187
6.3. Invariance properties of the fundamental integral: the theorem of Noether for single integrals, 201
6.4. Integral invariants and the independent Hilbert integral, 207
6.5. Multiple integral problems in the calculus of variations, 214
6.6. The theorem of Noether for multiple integrals, 226
6.7. Higher-order problems in the calculus of variations, 231
Problems, 236

Chapter 7. Riemannian geometry **239**

7.1. Introduction of a metric, 240
7.2. Geodesics, 250
7.3. Curvature theory of Riemannian spaces, 257
7.4. Subspaces of a Riemannian manifold, 267
7.5. Hypersurfaces of a Riemannian manifold, 273
7.6. The divergence theorem for hypersurfaces of a Riemannian manifold, 281
Problems, 287

Chapter 8. Invariant variational principles and physical field theories **298**

8.1. Invariant field theories, 299
8.2. Vector field theory, 300
8.3. Metric field theory, 305
8.4. The field equations of Einstein in vacuo, 314
8.5. Combined vector-metric field theory, 323
Problems, 326

Appendix. Tensors and forms on differentiable manifolds **331**

A.1. Differentiable manifolds and their tangent spaces, 332
A.2. Tensor algebra, 339
A.3. Tensor fields: Exterior derivatives, Lie brackets, and Lie derivatives, 344
A.4. Covariant differentiation: torsion and curvature, 349

Bibliography **353**
