Series Editors Preface	xvii
Preface	xix

1. Best Practice in Coring and Core Analysis	1
1.1 Core Analysis Data: The Foundation of Formation Evaluation	1
1.2 Core Analysis Data Uncertainty	4
1.2.1 Reasons and Consequences	4
1.2.2 Reducing Uncertainty	8
1.3 Core Analysis Management Framework	8
1.3.1 Core Analysis Planning and Design	8
1.3.2 Programme Design Considerations	9
1.3.3 Core Analysis Focal Points	9
1.3.4 Real-Time Quality Control	11
1.4 Best Practice in Core Analysis: An Overview	11
1.4.1 Coring, Core Handling and Core Processing	12
1.4.2 Sample Preparation	12
1.4.3 Routine Core Analysis	12
1.4.4 Special Core Analysis	12
1.4.5 Geomechanics Tests	13
1.4.6 Quality Control Procedures and Diagnostics	13
1.4.7 Example Core Analysis Programmes	14
1.4.8 Benefits	14
References	15
2. Wellsite Core Acquisition, Handling and Transportation	17
2.1 Coring Systems	17
2.1.1 Conventional Full-Diameter Coring Systems	18
2.1.2 Wireline-Retrievable Cores	27
2.1.3 Gel Coring Systems	28
2.1.4 Liquid and Gas Retention Coring Systems	28
2.1.5 Oriented Coring	35
2.1.6 Sidewall Cores	37
2.2 Conventional Coring Operations	40
2.2.1 Health, Safety and Environmental Considerations	41
2.2.2 Coring Team	42
2.2.3 Managing Coring Risks	42

2.3 Coring Fluids	45
2.3.1 Mud Types	45
2.3.2 Mud Tracers	45
2.4 Core Damage and Core Fluid/Petrophysical Property Alteration	48
2.4.1 Fluid Saturation Alteration	48
2.4.2 Stress Release	52
2.4.3 Wettability Alteration	57
2.5 Best Practice in Wellsite Handling	66
2.5.1 Core Recovery on Rig Floor	66
2.5.2 Linear Layout and Marking	68
2.5.3 Wellsite Gamma-Ray Scanning	70
2.5.4 Wellsite Liner Cutting	70
2.5.5 Wellsite Core Stabilisation and Preservation	72
2.5.6 Wellsite Sampling	77
2.5.7 Core Transportation	79
2.5.8 Coring Report	81
2.6 Special Handling Considerations for Difficult Rock Types	81
2.6.1 Unconsolidated Core	81
2.6.2 Carbonates	82
2.6.3 Shaly Sands	83
2.6.4 Shales	83
2.6.5 Coal	84
References	84
Recommended Reading	87
 3. Core Laboratory Processing and Screening	 89
3.1 Introduction	89
3.2 Core Receipt and Cutting	91
3.3 CT Scanning	91
3.4 Gamma Ray Logging	95
3.5 Removal from Liners	100
3.6 Core Viewing and Sample Selection	102
3.7 Sample Preservation	104
3.7.1 Dry Preservation	104
3.7.2 Wet Preservation	106
3.8 Core Plugging	106
3.8.1 Plug Samples	106
3.8.2 Drill Press and Plugging Fluids	108
3.8.3 Plug Orientation	110
3.8.4 Plug Allocation	112
3.8.5 Plug Trimming	116
3.9 Core Slabbing	117
3.10 Core Resination	118
3.11 Core Photography and Imaging	120
3.11.1 Conventional Imaging	121
3.11.2 360° Core Imaging	124
3.12 Weak or Unconsolidated Core Processing	125
3.12.1 Core Receipt and Cutting	125

3.12.2 CT Scanning	125
3.12.3 Core Gamma Ray Scanning	129
3.12.4 Core Slabbing	129
3.12.5 Core Viewing and Sample Selection	129
3.12.6 Core Plugging and Plug Protection	130
3.12.7 Core Photography	133
3.12.8 Core Preservation	133
References	134
Recommended Reading	134
4. Core Sample Preparation	135
4.1 Introduction	135
4.2 Cleaning	136
4.2.1 Solvents	136
4.2.2 Common Cleaning Methods	138
4.2.3 Core Cleaning Methods: Advantages and Drawbacks	146
4.3 Core Drying	146
4.3.1 Conventional (and Vacuum) Oven Drying	146
4.3.2 Humidity Oven Drying	146
4.3.3 Critical Point Drying	150
4.3.4 Flow-Through Drying	152
4.3.5 Core Drying Methods: Advantages and Drawbacks	153
4.4 Quality Control Issues, Checks and Diagnostics	153
4.5 Clays and Clay Damage Mechanisms	156
4.5.1 Clay Mineral Structures	158
4.5.2 Clay Types	160
4.5.3 Cation Exchange Capacity	161
4.5.4 Clay Morphology and Rock Property Controls	163
4.5.5 Clay Damage Mechanisms	165
4.5.6 Testing Without Drying	168
4.6 Core Conditioning for Porosity Measurements	170
4.6.1 Porosity Evaluation	170
4.6.2 Total and Effective Porosity Concepts	170
4.6.3 Log and Core Porosity	172
4.7 Special Considerations in Core Preparation	175
4.7.1 Wettability	175
4.7.2 Carbonates and Chalks	176
4.7.3 Halite	176
References	178
Recommended Reading/Viewing	179
5. Routine Core Analysis	181
5.1 Introduction	181
5.2 Fluid Saturation Measurements	182
5.2.1 Retort Method	183
5.2.2 Dean–Stark Analysis	187
5.3 Porosity Measurements	195
5.3.1 Helium Grain Volume and Grain Density	199

5.3.2 Helium Pore Volume	204
5.3.3 Bulk Volume	210
5.3.4 Liquid Saturation Porosity	216
5.3.5 Accuracy and Repeatability of Porosity Measurements	219
5.4 Permeability Measurements	221
5.4.1 Definitions	221
5.4.2 Darcy's Law	221
5.4.3 Non-Darcy Flow: Klinkenberg Effects	224
5.4.4 Non-Darcy Flow: Forchheimer Effect	228
5.4.5 Steady-State Permeability Measurements	229
5.4.6 Unsteady-State Permeability Measurements	239
5.4.7 Steady-State Liquid (Absolute) Permeability Measurements	247
5.4.8 Probe or Profile Permeability Measurements	252
5.5 Whole Core Analysis Measurements	262
5.5.1 Sample Preparation	262
5.5.2 Fluid Saturations	263
5.5.3 Porosity	263
5.5.4 Gas Permeability	263
References	266
Recommended Reading/Viewing	267
 6. Preparation for Special Core Analysis	 269
6.1 Fluid Preparation and Characterisation	269
6.1.1 Formation Water Samples and Brine Preparation	269
6.1.2 Oil	276
6.1.3 Gas	279
6.1.4 Data Requirements	280
6.2 Interfacial Tension	281
6.2.1 Methods to Determine IFT	282
6.3 Sample Selection for SCAL	286
6.3.1 Sample Provenance	286
6.3.2 CT Scanning and Photography	286
6.3.3 Petrophysical Properties	292
6.4 Reservoir Stress Estimation	300
6.4.1 Test Cell Design	300
6.4.2 Effective Stress Concepts	300
6.4.3 Net Confining Stress Loading Conditions	301
6.4.4 Reservoir Stress Data Sources	304
References	311
Recommended Reading	311
 7. Wettability and Wettability Tests	 313
7.1 Introduction	313
7.2 Contact Angle Method	315
7.2.1 Sample Preparation	316
7.2.2 Test Equipment	317

7.2.3 Test Procedures	319
7.2.4 Results	320
7.2.5 Data Reporting Requirements	320
7.2.6 Contact Angle Summary	320
7.3 Amott (Amott–Harvey) Method	322
7.3.1 Sample Preparation	323
7.3.2 Test Conditions	325
7.3.3 Test Equipment	327
7.3.4 Test Procedures	327
7.3.5 Amott–Harvey Wettability Index Calculation	329
7.3.6 Data Reporting Requirements	330
7.3.7 Amott (Amott–Harvey) Summary	331
7.4 USBM Method	332
7.4.1 Sample Preparation	334
7.4.2 Test Equipment	334
7.4.3 Key Processes	334
7.4.4 Test Procedures	334
7.4.5 USBM Index Calculation	336
7.4.6 Data Reporting Requirements	337
7.4.7 USBM Summary	338
7.5 Combined Amott–USBM (Combination) Method	339
7.5.1 Sample Preparation	340
7.5.2 Test Equipment	340
7.5.3 Test Procedures	340
7.5.4 Data Reporting Requirements	341
7.5.5 USBM and Amott–Harvey Index Calculation	341
7.5.6 Combined Amott–USBM Summary	342
References	344
Recommended Reading	345
 8. Electrical Property Tests	 347
8.1 Introduction	348
8.1.1 Resistivity Logs	348
8.1.2 Water Saturation Interpretation—Archie’s Law	349
8.1.3 Water Saturation Interpretation—Shaly Sands	352
8.1.4 Water Saturation Interpretation Parameters from Core	353
8.2 FRF Tests	354
8.2.1 Sample Selection and Preparation	354
8.2.2 Test Equipment	356
8.2.3 Test Procedures—Ambient (Base) Conditions	359
8.2.4 Test Procedures—Stress (Overburden) Conditions	360
8.2.5 Data Utilisation	366
8.2.6 Data Reporting Requirements	369
8.2.7 Advantages and Drawbacks/Issues	369
8.2.8 FRF Test Quality Control Issues, Checks and Diagnostics	371
8.3 Resistivity Index Tests	378
8.3.1 Test Equipment	379

8.3.2 Test Procedures	382
8.3.3 Data Assignment and Utilisation	387
8.3.4 Saturation Exponent: Laboratory Artefacts	390
8.3.5 Saturation Exponent: Rock Type and Pore/Fluid System Controls	398
8.3.6 Data Reporting Requirements	406
8.3.7 Advantages and Drawbacks/Issues	409
8.3.8 RI Test Quality Control Issues, Checks and Diagnostics	409
8.4 Waxman–Smits Parameters	416
8.4.1 Shaly Sand Models	416
8.4.2 Waxman–Smits Equation	420
8.4.3 CEC and Qv Tests	424
8.4.4 Data Utilisation and Assignment	430
8.4.5 Data Reporting Requirements	433
8.4.6 Advantages and Drawbacks/Issues	433
8.4.7 Qv, m^* and n^* Test Quality Control Issues, Checks and Diagnostics	433
8.5 Alternative Method for Saturation Exponent Determination	439
References	444
Recommended Reading	447
 9. Capillary Pressure	 449
9.1 Introduction	449
9.2 Primary Drainage Capillary Pressure	452
9.3 High Speed Centrifuge	453
9.3.1 Sample Preparation	454
9.3.2 Key Processes	455
9.3.3 Test Procedures (Primary Drainage)	458
9.3.4 Data Reporting Requirements	462
9.4 Porous Plate (Semi-Permeable Membrane): Primary Drainage	471
9.4.1 Sample Preparation	472
9.4.2 Key Processes	472
9.4.3 Test Procedures	474
9.4.4 Alternatives to Porous Plate Membranes	478
9.4.5 Data Reporting Requirements	479
9.5 Mercury–Air (MICP)	484
9.5.1 Sample Preparation	486
9.5.2 Test Equipment	486
9.5.3 Test Procedures	488
9.5.4 Pore Throat Size Distribution	490
9.5.5 Typical Output	493
9.5.6 Data Reporting Requirements	493
9.6 Capillary Pressure Methods: Equilibration Times	501
9.7 Summary of Drainage Capillary Pressure Methods	501
9.8 Data Corrections	502
9.8.1 Closure Corrections	502
9.8.2 Stress Corrections	508

9.8.3 Clay-Bound Water Corrections	508
9.8.4 Fluid Corrections	510
9.8.5 J Function	513
References	516
Recommended Reading	517
10. Relative Permeability	519
10.1 Introduction	520
10.1.1 Section Outline	520
10.1.2 Definitions	521
10.1.3 Irreducible Water Saturation	523
10.1.4 Residual Oil Saturations: Water–Oil System	525
10.1.5 Residual Oil Saturations: Gas–Oil System	527
10.1.6 Residual Gas Saturation: Water–Gas System	528
10.1.7 Critical Gas Saturation: Gas–Oil System	530
10.1.8 Critical Gas Saturation: Water–Gas System	530
10.1.9 Critical Water Saturation	532
10.1.10 Critical Oil Saturation: Gas Condensate Systems	533
10.1.11 Wettability	535
10.1.12 Corey Exponents	541
10.2 Measurement Techniques	543
10.2.1 USS Tests	543
10.2.2 SS Tests	545
10.2.3 Centrifuge Tests	547
10.2.4 Curve Definition as a Function of Test Method	547
10.2.5 Test Equipment	548
10.2.6 <i>In Situ</i> Saturation Monitoring (ISSM)	551
10.3 Test Data Interpretation Methodology	554
10.3.1 Unsteady State	554
10.3.2 Steady State	557
10.3.3 Centrifuge	557
10.3.4 Flow Rate and Capillary End Effects	558
10.3.5 Coreflood Simulation	562
10.4 Sample Selection, Test State and Test Conditions	565
10.4.1 Sample Selection	565
10.4.2 Test State	568
10.4.3 Overburden Stress	568
10.4.4 Initial Water Saturation	569
10.5 Measurement Descriptions	572
10.5.1 Unsteady State Water–Oil Relative Permeability (USSWO)	574
10.5.2 Steady State Water–Oil Relative Permeability (SSWO)	584
10.5.3 Centrifuge Water–Oil Relative Permeability (CentKrWO)	589
10.5.4 Unsteady State Gas–Oil Relative Permeability (USSGO)	592
10.5.5 Steady State Gas–Oil Relative Permeability (SSGO)	598
10.5.6 Centrifuge Gas–Oil Relative Permeability (CentKrGO)	603
10.5.7 Gas–Oil Relative Permeability Curve Generation	606

10.5.8	Unsteady State Gas–Water Relative Permeability (USSGW)	607
10.5.9	Steady State Gas–Water Relative Permeability (SSGW)	610
10.5.10	Unsteady State Water–Gas Relative Permeability (USSWG)	613
10.5.11	Steady State Water–Gas Relative Permeability (SSWG)	618
10.5.12	Centrifuge Water–Gas Relative Permeability (CentKrWG)	622
10.5.13	Residual Gas Saturation: Imbibition Centrifuge Capillary Pressure (Sgr-CentPc)	626
10.5.14	Counter-current Imbibition Residual (Trapped) Gas Saturation (CCI-Sgr)	629
10.6	Critical Gas Saturation (Depressurisation)	634
10.6.1	Sample Preparation	635
10.6.2	Test Equipment	635
10.6.3	Test Procedures	636
10.7	Experimental Data Provision	639
10.7.1	Samples and Fluids (for All Tests)	639
10.7.2	Drainage Capillary Pressure (Desaturation to Swir)	640
10.7.3	Centrifuge Relative Permeability (Water–Oil, Gas–Oil, Decane–Water)	641
10.7.4	Counter-Current Imbibition	642
10.7.5	USS and SS Flood Tests (Water–Oil, Gas–Oil and Water–Gas)	642
10.8	Summary and Recommendations	643
10.8.1	Oil Reservoirs	644
10.8.2	Gas and Gas Condensate Reservoirs	647
	References	650
	Recommended Reading	651
11.	Nuclear Magnetic Resonance (NMR)	655
11.1	Introduction	655
11.2	Nuclear Spin Relaxation in Rocks	657
11.3	NMR Relaxation and Pore Size	659
11.4	Porosity from NMR	661
11.5	Clay-Bound Water	662
11.6	Permeability Estimation	662
11.7	NMR Tests on Core	663
11.7.1	Sample Preparation	663
11.7.2	Key Processes	664
11.7.3	Test Equipment	664
11.7.4	Recommended NMR Measurement Parameters	665
11.7.5	Test Procedures	666
11.7.6	Data Reporting Requirements	667
11.8	NMR Core Measurement Summary	668
	References	668
	Recommended Reading	669

12. Geomechanics Tests	671
12.1 Introduction	672
12.2 Sample Selection and Preparation	673
12.2.1 Test Sites	674
12.2.2 Sample Orientation	678
12.2.3 Plugging Fluids	679
12.2.4 Sample Dimensions	679
12.2.5 Sample Saturation	680
12.3 Unconfined Compressive Strength Tests	681
12.3.1 Purpose and Sample Requirements	681
12.3.2 Test Equipment	681
12.3.3 Test Procedures	682
12.3.4 Data Utilisation	682
12.3.5 Data Reporting Requirements	683
12.3.6 Advantages and Drawbacks/Issues	683
12.3.7 UCS Quality Control Issues, Checks and Diagnostics	684
12.4 Triaxial Compression Strength Tests	687
12.4.1 Purpose and Sample Requirements	687
12.4.2 Test Equipment	688
12.4.3 Test Procedures	688
12.4.4 Data Utilisation	695
12.4.5 Data Reporting Requirements	700
12.4.6 Advantages and Drawbacks/Issues	700
12.4.7 Triaxial Test Quality Control Issues, Checks and Diagnostics	700
12.5 Triaxial Testing of Shales	706
12.5.1 Purpose and Sample Requirements	706
12.5.2 Sample Preparation	706
12.5.3 Test Equipment	709
12.5.4 Test Procedures	709
12.5.5 Data Utilisation	712
12.5.6 Data Reporting Requirements	713
12.5.7 Advantages and Drawbacks/Issues	714
12.5.8 Shale Triaxial Test Quality Control Issues, Checks and Diagnostics	714
12.6 Thick-Wall Cylinder Tests	717
12.6.1 Purpose and Sample Requirements	717
12.6.2 Test Equipment	719
12.6.3 Test Procedures (Standard TWC)	722
12.6.4 Data Utilisation	722
12.6.5 Data Reporting Requirements	724
12.6.6 Advantages and Drawbacks/Issues	724
12.6.7 TWC Test Quality Control Issues, Checks and Diagnostics	725
12.7 Tensile Strength Tests	728
12.7.1 Purpose and Sample Requirements	728
12.7.2 Test Equipment and Procedures	729

12.7.3 Data Utilisation	730
12.7.4 Data Reporting Requirements	731
12.7.5 Advantages and Drawbacks/Issues	731
12.7.6 Tensile Strength Test Quality Control Issues, Checks and Diagnostics	732
12.8 Acoustic Velocity (Travel Time) Tests	732
12.8.1 Purpose and Sample Requirements	732
12.8.2 Sample Preparation	733
12.8.3 Test Equipment	733
12.8.4 Test Procedures	735
12.8.5 Data Utilisation	735
12.8.6 Data Reporting Requirements	736
12.8.7 Advantages and Drawbacks/Issues	736
12.8.8 ATT Test Quality Control Issues, Checks and Diagnostics	736
12.9 DSCA Tests	739
12.9.1 Purpose and Sample Requirements	739
12.9.2 Test Equipment	739
12.9.3 Test Procedures	740
12.9.4 Data Utilisation	742
12.9.5 Data Reporting Requirements	744
12.9.6 Advantages and Drawbacks/Issues	744
12.9.7 DSCA Test Quality Control Issues, Checks and Diagnostics	744
12.10 Pore Volume Compressibility Tests	746
12.10.1 Purpose and Compressibility Definitions	746
12.10.2 Compressibility Test Loading Conditions	747
12.10.3 Sample Preparation	751
12.10.4 Uniaxial K_0 Test Equipment	751
12.10.5 Uniaxial K_0 Test Procedures	751
12.10.6 Data Utilisation	754
12.10.7 Data Reporting Requirements	757
12.10.8 Advantages and Drawbacks/Issues	757
12.10.9 Uniaxial K_0 Compressibility Test Quality Control Issues, Checks and Diagnostics	757
12.11 Particle Size Analysis Tests	761
12.11.1 Purpose	761
12.11.2 Mechanical Particle Size Analysis	762
12.11.3 Laser Particle Size Analysis	769
