

CONTENTS

Introduction..... 5

Basics of data acquisition..... 6

1.1. Red blood cell count 11

1.2. Estimation of haemoglobin concentration and of mean corpuscular haemoglobin 15

1.3. Calculated parameters of red blood cells 18

2. Estimation of blood group by slide method 19

3. Erythrocyte sedimentation rate 21

4. Estimation of osmotic resistance of red blood cells 23

5. Signal detection by PowerLab system – instructions..... 25

6. Apex beat, heart sounds 26

7. Examination of pulse by palpation 32

8. Blood pressure in man 35

9. Non-invasive methods of blood pressure measurement 38

10. ECG record by means of personal computer 41

11. Digital model of aortic function (a simulation program) 44

12. Measurement of pulse wave velocity. Sphygmography..... 48

13. Systolic time intervals 51

14. Ergometry 54

15. Blood flow in forearm (Pletysmography) 60

16. Blood flow in veins 64

17. Pneumography 66

18. Spirometric examination 70

19. Recording of the forced vital capacity 74

20. Pneumotachography and estimation of airway resistance 76

21. Evaluation of sensitivity of respiratory centre to hypoxia and to hypercapnia..... 79

22. Measurement of basal metabolic expenditure (BME) using indirect calorimetry

 Energy output in change of body position. Repay of oxygen debt. 85

23. Calculation of energy expenditure 89

24. Compiling daily diet 91

25. Evaluation of nutritional state 97

26. Recruitment and summation in skeletal muscle..... 103

27. Examination of reflexes in man 107

28. Recording of Achilles' tendon reflex 110

29. Erect posture examination 113

30. Vertigo and nystagmus 116

31. Skin sensation and general physiology of the skin 118

32. Cutaneous sense organs 121

33. Estimation of visual acuity 123

34. Accomodation, Scheiner's experiment 124

35. Visual field and blind spot 126

36. Examination of colour blindness 128

37. Astigmatism 130

38. Vision in dark 132

39. Observation of ocular fundus 134

40. Purkyne's images 136

41. Estimation of reaction time using computer	137
42. EOG – Electrooculography.....	139
43. EEG – Electroencephalography.....	142
44. Evoked potentials (EPs)	145
Appendix 1: Selected units (SI) used in physiology.....	147
Appendix 2: Selected pressure units conversions.....	147
Appendix 3: Selected physiological values	148
