List of figures.....	5
List of tables.....	7
List of abbreviations	9
Preface.....	10
1 Repeated measurements	12
1.1 Adjustment methods	12
1.2 The processing procedures	13
1.3 Least squares method.....	13
1.4 The Gauss-Markov model based on LSM	14
1.4.1 The fundamental linear models of measurement, linear estimations.....	16
1.4.2 The use of LSM for estimation of complements of unknown parameters.....	18
1.5 Geodetic networks and their processing	18
1.5.1 Processing of a network observed by GNSS technology.....	20
1.5.2 The cofactor matrix	23
1.5.3 Processing of a network by GMM with full rank	26
1.5.4 Processing of a network by GMM with incomplete rank	28
1.6 Accuracy of a geodetic network	29
1.6.1 Statistical hypothesis testing	32
1.6.2 The global test of estimation model	34
1.6.3 Student's test of outlying values	35
1.6.4 Pope's Tau method.....	36
1.6.5 The Danish method by Hekimoglu	37
1.6.6 Graphical representation of accuracy of network points	38
2 Global Navigation Satellite Systems	39
2.1 The principle of using satellite systems for determining the position.....	39
2.2 Observing by GNSS technology.....	40
2.3 Height measurement using a GNSS technology.....	40
2.4 Classification of satellite systems.....	41
2.4.1 The accuracy of point position determined by GNSS receiver.....	44
2.4.2 Factors affecting the accuracy of position determined by GNSS	45
2.4.3 Planning of GNSS observations.....	47
2.4.4 Methods of determining point position by GNSS technologies	48
2.4.5 Advantages and disadvantages of single frequency receivers	49
2.5 The RINEX format	50
3 GNSS observation of a geodetic network.....	52
3.1 Location of the upper reservoir PSHPP Čierny Váh	52

3.1.1	Observing of the geodetic network.....	54
3.2	The processing by Gauss-Markov model.....	58
3.3	MathWorks Matlab	60
3.3.1	Comparison of the results of separate and bivariate adjustment	62
3.3.2	Comparison of accuracy in terms of used cofactors	63
3.3.3	Determination of adjusted coordinates depending on cofactors selection.....	73
3.4	Deformation analysis.....	84
3.5	Objects of deformation analysis.....	85
3.5.1	The project of deformation analysis	85
3.6	Deformation models.....	86
3.7	Geodetic monitoring.....	87
3.7.1	Geodetic control.....	88
3.7.2	Methods of measurement of displacements and deformations.....	89
3.7.3	Deformation	90
3.7.4	Fisher's congruency test of two files with different accuracy.....	91
3.7.5	Global congruency test	92
3.7.6	Local congruency test	93
3.7.7	Test by confidence ellipsoid	94
3.8	Graphical representation of results.....	95
4	Analysis of simulation of missing satellite observations.....	107
4.1	Regression and correlation analysis	107
4.1.1	Linear regression model – LRM.....	109
4.1.2	Nonlinear regression models - NLRM	112
4.2	Time series	113
4.2.1	Modelling of time series	115
4.2.2	The analysis of trend component.....	117
4.3	Simulation of missing GNSS observations.....	125
4.3.1	Simulation of the observation vector weighted by random errors.....	125
5	Conclusion	130
	References.....	132
