### Cytoplasmic Control over the Nuclear Events of Cell Reproduction

NOËL DE TERRA

|                                                                         |    |
|-------------------------------------------------------------------------|----|
| I. Introduction .....                                                   | 1  |
| II. Cytoplasmic Control of Nuclear Reproduction in Ciliates .....       | 2  |
| III. Cytoplasmic Control of Nuclear Reproduction in Egg Cells .....     | 17 |
| IV. Cytoplasmic Control of Nuclear Reproduction in Cultured Cells ..... | 21 |
| V. Cytoplasmic Control of Nuclear Reproduction in Amebas .....          | 23 |
| VI. Conclusions .....                                                   | 25 |
| References .....                                                        | 28 |

### Coordination of the Rhythm of Beat in Some Ciliary Systems

M. A. SLEIGH

|                                                                   |    |
|-------------------------------------------------------------------|----|
| I. Introduction .....                                             | 31 |
| II. The Characteristics of Some Ciliary Systems .....             | 32 |
| III. Mechanisms by Which Rhythm of Beat May Be Communicated ..... | 42 |
| IV. Conclusion .....                                              | 52 |
| References .....                                                  | 52 |

### The Significance of the Structural and Functional Similarities of Bacteria and Mitochondria

SYLVAN NASS

|                                                                   |     |
|-------------------------------------------------------------------|-----|
| I. Introduction .....                                             | 55  |
| II. The Bacteria-Mitochondria Homology .....                      | 57  |
| III. The Origin of Mitochondria and the Eukaryotic Cell .....     | 103 |
| IV. Mitochondria as Integrated Units of the Eukaryotic Cell ..... | 107 |
| V. Summary .....                                                  | 116 |
| References .....                                                  | 117 |

## The Effects of Steroid Hormones on Macrophage Activity

B. VERNON-ROBERTS

|                                                   |     |
|---------------------------------------------------|-----|
| I. Introduction .....                             | 131 |
| II. Effects of Endogenous Steroids .....          | 133 |
| III. Effects of Administered Steroids .....       | 139 |
| IV. Effects of Steroid Interaction .....          | 151 |
| V. Steroid Biotransformation by Macrophages ..... | 153 |
| VI. Concluding Remarks .....                      | 154 |
| References .....                                  | 155 |

## The Fine Structure of Malaria Parasites

MARIA A. RUDZINSKA

|                                                                                               |     |
|-----------------------------------------------------------------------------------------------|-----|
| I. Introduction .....                                                                         | 161 |
| II. Fine Structure and Functions of Cell Organelles at Various Stages in the Life Cycle ..... | 161 |
| III. Concluding Remarks .....                                                                 | 194 |
| References .....                                                                              | 196 |

## The Growth of Liver Parenchymal Nuclei and Its Endocrine Regulation

RITA CARRIERE

|                                                   |     |
|---------------------------------------------------|-----|
| I. Introduction .....                             | 201 |
| II. Normal Parenchymal Nuclei .....               | 202 |
| III. Endocrine Regulation of Nuclear Growth ..... | 235 |
| IV. Concluding Remarks .....                      | 267 |
| References .....                                  | 268 |

## Strandedness of Chromosomes

SHELDON WOLFF

|                                                   |     |
|---------------------------------------------------|-----|
| I. Introduction .....                             | 279 |
| II. Observational Evidence .....                  | 280 |
| III. Experimental Evidence .....                  | 283 |
| IV. Inferential Evidence .....                    | 288 |
| V. Evidence for Single-Stranded Chromosomes ..... | 289 |

|       |                                                  |     |
|-------|--------------------------------------------------|-----|
| VI.   | Studies with the Electron Microscope .....       | 291 |
| VII.  | Redundancy and Single-Stranded Chromosomes ..... | 292 |
| VIII. | Conclusion .....                                 | 293 |
|       | References .....                                 | 294 |

## Isozymes: Classification, Frequency, and Significance

CHARLES R. SHAW

|      |                                              |     |
|------|----------------------------------------------|-----|
| I.   | Introduction .....                           | 297 |
| II.  | Definition and Classification .....          | 298 |
| III. | Molecular Basis for Secondary Isozymes ..... | 301 |
| IV.  | Frequency of Isozymes .....                  | 303 |
| V.   | Significance of Isozymes .....               | 306 |
| VI.  | Evolution of Isozymes .....                  | 326 |
| VII. | Summary .....                                | 328 |
|      | References .....                             | 329 |

## The Enzymes of the Embryonic Nephron

LUCIE ARVY

|      |                                |     |
|------|--------------------------------|-----|
| I.   | Introduction .....             | 333 |
| II.  | Enzymes in Invertebrates ..... | 335 |
| III. | Enzymes in Vertebrates .....   | 338 |
| IV.  | Conclusions .....              | 358 |
|      | References .....               | 359 |

## Protein Metabolism in Nerve Cells

B. DROZ

|      |                                                                     |     |
|------|---------------------------------------------------------------------|-----|
| I.   | Introduction .....                                                  | 363 |
| II.  | Biochemical Studies of Protein Turnover in the Nervous System ..... | 363 |
| III. | Protein Turnover in Nerve Cell Bodies .....                         | 364 |
| IV.  | Protein Turnover in Axonal and Dendritic Processes .....            | 373 |
| V.   | Significance of Protein Turnover in Neurons .....                   | 383 |
| VI.  | Conclusion .....                                                    | 386 |
|      | References .....                                                    | 387 |
