Studies on Freeze-Etching of Cell Membranes

KURT MÜHLETHALER

I. Introduction	1
II. Membrane Faces and Surfaces Observed after Freeze-Etching.....	2
III. The Freezing Process.....	7
IV. The Method of Double-Fracturing.....	7
V. Interpretations of the Replicas of Double-Fractured Membranes.....	10
VI. Discussion	17
VII. Conclusions	18
References	18

Recent Developments in Light and Electron Microscope Radioautography

G. C. BUDD

I. Introduction	21
II. Radioautography of Diffusible Materials.....	22
III. Electron Microscope Radioautography.....	34
IV. Light Microscope Radioautography with Thin Sections and Emulsion Layers.	48
V. Electron Microscope Radioautography of Diffusible Substances.....	49
VI. Summary	53
References	53

Morphological and Histochemical Aspects of Glycoproteins at the Surface of Animal Cells

A. RAMBOURG

I. Introduction	57
II. Morphological Components Found on the Outside of the Plasma Membrane..	58
III. Histochemical Techniques for Carbohydrate Detection at the Cell Surface....	62
IV. The Carbohydrate-Rich "Cell Coat".....	72
V. Variations in the Cell Coat	89
VI. Renewal of the Cell Coat.....	93

VII.	Properties of the Cell Coat	100
VIII.	Epilogue	106
	Note Added in Proof.....	106
	References	106

DNA Biosynthesis

H. S. JANSZ, D. VAN DER MEI, AND G. M. ZANDVLIET

I.	Introduction	115
II.	Cellular Organization of DNA Replication.....	117
III.	Mechanism of DNA Replication	122
IV.	Control of DNA Replication	148
	References	159

Cytokinesis in Animal Cells

R. RAPPAPORT

I.	Introduction	169
II.	Location of the Physical Mechanism.....	170
III.	Furrow Establishment.....	172
IV.	The Furrowing Process.....	191
V.	Summary and Conclusions.....	207
	Note Added in Proof.....	208
	References	208

The Control of Cell Division in the Ocular Lens

C. V. HARDING, J. R. REDDAN, N. J. UNAKAR, AND M. BAGCHI

I.	Introduction: The General Problem of the Mechanism of Control of Cell Division.....	216
II.	Suitability of the Ocular Lens for Studies on Cell Division.....	217
III.	Structural Organization and Cell Division in the Normal Lens Epithelium....	221
IV.	The Cell Cycle and the G_0 State.....	226
V.	Injury and Release from the G_0 State.....	229
VI.	Effects of Irradiation on DNA Synthesis and Mitosis.....	242
VII.	Patterns of DNA Synthesis and Mitosis in the Cultured Lens.....	245
VIII.	Quantitative Studies on the Stimulation of Mitosis by Serum in the Cultured Lens	252
IX.	Partial Characterization of a Mitogenic Factor(s) in Serum.....	257
X.	Effects of Experimental Elevation of the Serum Protein Content of the Aqueous Humor on Mitosis.....	260

XI.	Replacement of the Serum Mitogenic Factor(s) by Insulin: The Stimulation of DNA Synthesis and Mitosis in a Defined Medium.....	261
XII.	Natural Inhibitors of Mitosis (Tissue Factors That Inhibit Mitosis).....	267
XIII.	Metabolic Prerequisites for DNA Synthesis and Mitosis.....	268
XIV.	Ultrastructural Changes That Precede the Initiation of DNA Synthesis and Mitosis in the Injured and Cultured Lens.....	272
XV.	Modification of the Time Required for the Serum-Induced Metabolic and Ultrastructural Changes by Preincubation of the Lens in a Nonstimulating Medium	276
XVI.	The Cell Cycle and Development.....	282
XVII.	Theoretical Considerations of the Triggering of the Cell Cycle.....	290
	References	294

The Cytokinins

HANS KENDE

I.	Introduction	301
II.	Chemistry of Cytokinins.....	302
III.	Occurrence of Free Cytokinins.....	306
IV.	Physiological and Biochemical Effects.....	308
V.	Site and Mode of Action.....	325
VI.	The Task Ahead.....	331
	References	333

Cytophysiology of the Teleost Pituitary

MARTIN SAGE AND HOWARD A. BERN

I.	Introduction	339
II.	Adenohypophysis	344
III.	Pars Intermedia.....	361
IV.	Neurohypophysis	363
V.	Conclusion: The Neural Control of Adenohypophysial Cells.....	366
	Addendum	368
	References	368
