Highly Repetitive Sequences of DNA in Chromosomes

W. G. FLAMM

I. Introduction	2
II. Definition and Classes of Nucleotide Sequences.....	3
III. Methods of Preparation	7
IV. Chemical and Physical Properties of Very Highly Repetitive Sequences.....	21
V. Occurrence and Quantities of Very Highly Repetitive Sequences.....	30
VI. Evolution of Repeated Nucleotide Sequences and Relevance to the Master-Slave Hypothesis	34
VII. Chromosomal Distribution and Localization of Very Highly Repetitive Sequences	37
VIII. Semiconservative Replication of Very Highly Repetitive Sequences.....	41
IX. Possible Biological Function of Very Highly Repetitive Sequences.....	43
X. Discussion	48
References	49

The Origin of the Wide Species Variation in Nuclear DNA Content

H. REES AND R. N. JONES

I. Introduction	53
II. The Range of Variation	56
III. Variation among Diploid Species	65
IV. The Nature of the Variable DNA	82
V. Amplification within Chromosomes.....	85
VI. Loss and Gain in Evolution.....	88
References	90

Polarized Intracellular Particle Transport: Saltatory Movements and Cytoplasmic Streaming

LIONEL I. REBHUN

I. Introduction	93
II. Phenomenology	95

III.	Electron Microscope Observation and Experimental Techniques.....	108
IV.	Sources of Motive Force.....	124
V.	Applications	127
	Addendum	129
	References.....	131

The Kinetoplast of the Hemoflagellates

LARRY SIMPSON

I.	Introduction	140
II.	Ultrastructure of the Kinetoplast	145
III.	Developmental and Phylogenetic Variations in the Ultrastructure and Enzyme Content of the Mitochondrion	151
IV.	Cell Fractionation Studies with Kinetoplastidae	159
V.	The Ultrastructure of K-DNA in Thin Sections	165
VI.	K-DNA Isolation and Characterization	171
VII.	Replication of K-DNA	185
VIII.	Normal or Dye-Induced Loss of K-DNA	189
IX.	Conclusions and Questions	202
	References	203

Transport across the Intestinal Mucosal Cell: Hierarchies of Function

D. S. PARSONS AND C. A. R. BOYD

I.	Introduction	209
II.	Membrane Theory; Types of Model Cells; Cellular Symmetry	214
III.	Transmembrane Compartments; Role of Glycocalyx	217
IV.	Transcellular Routes for Substrate; Role of Ergastoplasm.....	222
V.	Membrane Transport Systems.....	232
VI.	Relationships between Membrane Digestion and Membrane Transport.....	246
VII.	Conclusions	251
	References	253

Wound Healing and Regeneration in the Crab *Paratelphusa hydrodromous*

RITA G. ADIYODI

I.	General Introduction	257
II.	Gross Considerations	258
III.	Microscopic Considerations	263
IV.	Discussion	280
	References	288

The Use of Ferritin-Conjugated Antibodies in Electron Microscopy

COUNCILMAN MORGAN

I.	Introduction	291
II.	Fixation	293
III.	Applications	293
IV.	Conclusions	321
	References	323

Metabolic DNA in Ciliated Protozoa, Salivary Gland Chromosomes, and Mammalian Cells

S. R. PELC

I.	Introduction	327
II.	The Concept of Stability of DNA	327
III.	Definition of Metabolic DNA	328
IV.	Methods Employed	329
V.	Experiments That Indicate the Presence of Metabolic DNA	330
VI.	The Concept of Metabolic DNA	342
VII.	Ciliated Protozoa	344
VIII.	Salivary Gland Chromosomes	346
IX.	Discussion	349
	References	353
