|-------------------------------------------------------------------------|-----------|
| <b>INTRODUCTION .....</b>                                               | <b>7</b>  |
| <b>1 MODELLING OF DYNAMIC SYSTEMS .....</b>                             | <b>8</b>  |
| <b>2 SIMULATION OF MATHEMATICAL MODELS.....</b>                         | <b>9</b>  |
| <b>3 MATHEMATICAL MODELS OF THE DYNAMIC SYSTEM .....</b>                | <b>9</b>  |
| <b>4 PROGRAMMING OF THE MATHEMATICAL MODEL.....</b>                     | <b>12</b> |
| <b>5 SIMULATION PROGRAMME MATLAB – SIMULINK .....</b>                   | <b>19</b> |
| 5.1 Starting with MATLAB-Simulink.....                                  | 19        |
| <b>6 MODELLING OF MECHANICAL SYSTEMS.....</b>                           | <b>23</b> |
| 6.1 Elements of the Mechanical Systems.....                             | 23        |
| 6.2 Mass point.....                                                     | 24        |
| 6.3 Spring .....                                                        | 24        |
| 6.4 Damper .....                                                        | 25        |
| 6.5 Source of force and velocity .....                                  | 25        |
| <b>7 MODELLING OF THE MECHANICAL SYSTEMS WITH ROTATING MOTION .....</b> | <b>26</b> |
| 7.1 Disk .....                                                          | 26        |
| 7.2 Torsional spring .....                                              | 26        |
| 7.3 Torsional damper .....                                              | 27        |
| 7.4 Two mass rotating system .....                                      | 27        |
| <b>8 MODELLING OF ELECTRICAL SYSTEMS.....</b>                           | <b>30</b> |
| 8.1 Resistor .....                                                      | 30        |
| 8.2 Capacitor .....                                                     | 30        |
| 8.3 Inductor.....                                                       | 31        |
| 8.4 Analysis of the electrical circuits.....                            | 31        |
| 8.5 Mathematical model of the DC motor .....                            | 32        |
| <b>9 MODELLING OF HYDRAULIC SYSTEM .....</b>                            | <b>34</b> |

|                                                                                   |           |
|-----------------------------------------------------------------------------------|-----------|
| 9.1 Physical Laws used by Modelling of Hydraulic Systems .....                    | 34        |
| 9.2 Conservation of the mass .....                                                | 34        |
| 9.3 Conservation of energy – Bernoulli's equation .....                           | 35        |
| 9.4 Element Laws .....                                                            | 35        |
| 9.5 Hydraulic capacity .....                                                      | 35        |
| 9.6 Hydraulic Resistance.....                                                     | 37        |
| 9.7 Hydraulic Inertance .....                                                     | 38        |
| 9.8 Outlet from the pressurized tank.....                                         | 39        |
| <b>10 MODELLING OF HYDRAULIC DRIVES .....</b>                                     | <b>42</b> |
| 10.1 Hydraulic cylinder .....                                                     | 42        |
| 10.2 Flow Control valve .....                                                     | 43        |
| 10.3 Linearized Model of the Hydraulic Drive .....                                | 46        |
| 10.4 Hydraulic Pipeline.....                                                      | 47        |
| 10.5 Model of the Pump.....                                                       | 47        |
| <b>11 SIMULATION OF THE MATHEMATICAL MODELS.....</b>                              | <b>49</b> |
| <b>12 ONE STEP METHODS.....</b>                                                   | <b>51</b> |
| 12.1 Euler's Method .....                                                         | 51        |
| 12.2 Runge – Kutta Methods .....                                                  | 52        |
| 12.3 Runge-Kutta Method's 2 <sup>nd</sup> order .....                             | 53        |
| 12.4 Runge - Kutta Method 4 <sup>th</sup> order.....                              | 54        |
| <b>13 MULTI-STEP METHODS .....</b>                                                | <b>55</b> |
| 13.1 Predictor Formulas Adams-Bashforth Methods.....                              | 55        |
| 13.2 Implicit Adams-Moulton Methods .....                                         | 56        |
| 13.3 Predictor – corrector methods.....                                           | 57        |
| 13.4 Numerical solution of the system of the ordinary differential equations..... | 57        |
| 13.5 Stiff systems .....                                                          | 58        |
| 13.6 Stability of the numerical solution of differential equation .....           | 58        |
| 13.7 A-stable Methods for the Solution of the ODE .....                           | 60        |

|                          |           |
|--------------------------|-----------|
| <b>14 EXAMPLES .....</b> | <b>63</b> |
| Example 1.....           | 63        |
| Example 2.....           | 65        |
| Example 3.....           | 66        |
| Example 4.....           | 69        |
| Example 5.....           | 70        |
| Example 6.....           | 71        |
| Example 7.....           | 74        |
| Example 8.....           | 75        |
| Example 9.....           | 78        |
| Example 10.....          | 80        |
| Example 11.....          | 82        |
