About the authors	ix
Preface	xi
Acknowledgment	xiii
1. Introduction.....	1
1.1 What is gait?	1
1.2 Gait cycle	1
1.3 Features of gait	3
1.4 Model-based versus model-free gait assessment	4
1.5 Applications of gait analysis.....	9
1.6 Clinical aspects of human gait	10
1.7 Sensors for gait data acquisition	12
1.8 Summary	13
References	13
2. Statistics and computational intelligence in clinical gait analysis	17
2.1 Introduction	17
2.2 Statistics in clinical gait data	17
2.3 Computational intelligence in clinical gait data	20
2.4 Statistics versus computational intelligence	22
2.5 Summary	23
References	23
3. Low-cost sensors for gait analysis.....	25
3.1 Introduction	25
3.2 Motion capture sensors for gait.....	25
3.3 Microsoft kinect.....	27
3.4 Wearable sensors	30
3.5 Summary	40
References	40

4. Validation study of low-cost sensors	45
4.1 Introduction	45
4.2 Kinect validation for clinical usages	45
4.3 Inertial sensor validation on estimating joint angles	50
4.4 Summary	53
References	54
5. Gait segmentation and event detection techniques.....	57
5.1 Introduction	57
5.2 Why gait cycle segmentation?	57
5.3 Vision sensor-based gait cycle segmentation	58
5.4 Kinect in gait cycle segmentation.....	61
5.5 Inertial sensor-based gait segmentation	62
5.6 Electromyography sensor-based gait segmentation	65
5.7 Summary	67
References	67
6. Methodologies for vision-based automatic pathological gait detection	71
6.1 Introduction	71
6.2 Gait detection techniques	72
6.3 Automatic diagnostic systems using Kinect	75
6.4 Gait diagnosis in multi-Kinect architecture.....	76
6.5 Summary	78
References	78
7. Pathological gait pattern analysis using inertial sensor	81
7.1 Introduction	81
7.2 Data collection	82
7.3 Gait signal segmentation	84
7.4 Gait features using inertial sensor signals	84
7.5 Automated feature extraction using deep learning techniques.....	87

7.6	Gait pattern modeling using machine learning techniques	88
7.7	An example study	89
7.8	Summary	96
	References	97
8.	A low-cost electromyography (EMG) sensor-based gait activity analysis	101
8.1	Introduction	101
8.2	Description of lower leg muscles	101
8.3	Specification of MyoWare electromyography sensor	102
8.4	Hardware requirement for electromyography experimental setup	105
8.5	Preprocessing of electromyography signals	110
8.6	Electromyography sensor-based feature analysis	114
8.7	Gait analysis using surface electromyography sensors	118
8.8	Summary	124
	References	125
9.	Low-cost systems—based therapeutic intervention	129
9.1	Introduction	129
9.2	Kinect in therapeutic intervention	130
9.3	Wearable sensors in therapeutic intervention	131
9.4	Summary	133
	References	133
10.	Prevention, rehabilitation, monitoring, and recovery prediction for musculoskeletal injuries	137
10.1	Introduction	137
10.2	Musculoskeletal injuries: causes and treatments	138
10.3	Prevention of musculoskeletal injury through gait monitoring	140

10.4 Rehabilitation monitoring for recovery prediction	142
10.5 Summary	144
References	144
11. Design and development of pathological gait assessment tools	147
11.1 Introduction	147
11.2 Tools for pathological gait assessment	148
11.3 Development of a gait event annotation tool	149
11.4 Development of a gait diagnosis tool	158
11.5 Summary	168
References	168
12. Conclusion	171
Index	175
