

CONTENTS

INTRUDUCTION	8
1 CLASSIFICATION OF MINERAL RESERVES	10
1.1 UN System of International Classification of Reserves	13
1.1.1 Terms and Definitions of the UN Framework Classification System of Reserves/Resources	15
1.1.2 Terminology of Reserves/resources - Comparison of National Classification Systems with the proposed UN terminology	16
1.1.3 Definitions of Terms used in English Version of the United Nations International Framework Classification for Reserves/Resources - Solid Fuels and Mineral Commodities	19
1.2 Problems Connected with the Definition of Economic and Potentially Economic (Balancing and Non-balancing) Reserves and Resources	24
2 EVALUATION OF INDUSTRIAL MINERAL DEPOSITS	26
2.1 Price of the industrial mineral deposit	27
2.2 Special cases of evaluation	33
3 OPEN-PIT MINING OF MINERALS	34
3.1 Significance of open-pit mining of minerals in the world	34
3.2 Specifics of open-pit mining	37
3.2.1 Comparison of open-pit and underground mining	37
4 BASIC PARAMETERS OF OPEN-PIT MINING	38
4.1 Fundamental terms in open-pit mining	38
4.2 Types of economic mineral deposits	44
4.3 Geotechnical and geomechanical parameters of an open-pit mine	46
4.3.1 Classification of a quarry face material	46
4.3.2 Basic geomechanical and geotechnical properties of minerals	47
4.4 Mining-influencing parameters	50
4.4.1 Mining-influencing forces	50
4.5 Conditions of an open-pit mine building	50
4.5.1 Dynamics of a quarry building	50
4.5.2 Work safety	51
4.5.3 Design and management of winning operations	52
4.5.4 Range of cyclic character of winning operations	54
4.6 Geometric quarry parameters	55
4.6.1 Bench and quarry height	55
4.6.2 Working and transport width of a bench	60
4.6.3 Slope angle	60
4.6.4 Working face	61
4.7 Stripping coefficient (ratio)	62
4.7.1 Mining (current) stripping coefficient	63
4.7.2 Medium stripping coefficient	63
4.7.3 Investment stripping coefficient	63
4.7.4 Limiting stripping coefficient	64
4.7.5 Geological stripping coefficient	64

4.8	Limiting depth of a quarry	64
4.8.1	Method of determining the limiting depth under the condition $k_d < k_{hr}$	66
4.8.2	Method of determining the limiting depth for the condition $k_i < k_{hr}$	66
4.8.3	Method of determining the limiting depth for the condition $k_o + k < k_{hr}$	67
4.9	Influence of natural and other factors on a quarry's parameters	70
4.9.1	Influence of a deposit slope angle	70
4.9.2	Influence of a deposit's thickness	71
4.9.3	Influence of overburden thickness	71
4.9.4	Influence of the manner of development and mining method	71
4.9.5	Influence of a quarry working zone slope angle	72
4.9.6	Influence of winning operation advance direction	72
5	DEVELOPMENT OF AN OPEN-PIT MINE	72
5.1	General conditions of development	72
5.2	Manner of open-pit mine development	74
5.2.1	Development by a cut	74
5.2.1.1	Types of cuts	75
5.2.1.2	Development by an external cut	78
5.2.1.3	Development by an internal cut	80
5.2.2	Direct development of horizontal and slightly inclined deposits	81
5.2.3	Development by underground space	81
5.2.4	Preparatory cuts	82
5.3	Designing transport routes	82
5.4	Methods of cut winning	84
5.4.1	Transportless method of cut winning	85
5.4.2	Cut winning including earth disposal	87
5.4.3	Cut winning with excavators with continuous operating cycle	89
5.4.4	Special methods of cut winning	90
5.4.4.1	Cut winning with scrapers	90
5.4.4.2	Cut winning by blasting	91
6	SYSTEMATICS OF OPEN-PIT MINING	91
6.1	General principles and qualification of open-pit mining systems	91
6.2	Influence of stowing and mining-geological conditions of a deposit	94
6.2.1	Mining-geological conditions and their influence on the selection of mining method	94
6.2.2	Influence of the deposit shape	95
6.2.2.1	Longitudinal (directional) mining methods	95
6.2.2.2	Cross mining methods	96
6.2.2.3	Fan-like and circular mining methods	96
6.3	Mining methods in relation to the transport of the mined material – stripping methods	97
6.3.1	Transportless mining sets	97
6.3.1.1	Method of mining waste dump calculation	99
6.3.2	Mining systems with transverse transport of material	101
6.3.2.1	System with a conveyor bridge (transport bridge)	101
6.3.2.2	Mining system with a cross-pit spreader	105
6.3.3	Mining system with railway transport	106
6.3.4	Mining system with belt conveyance	110
6.3.4.1	Mining system on horizontal benches	110

6.3.4.2	Mining system on inclined benches	113
6.3.5	Mining methods with vehicular transport	114
6.3.6	Mining methods with combined transport	116
6.4	Parameters of mining methods and mutual relationships	117
7	MINING TECHNOLOGY	117
7.1	Parameters of machine mining technology	118
7.2	Mining technology by excavators – division and characteristic	120
7.3	Mining technology with an interrupted work cycle (cyclic technology)	122
7.3.1	Mining with a shovel excavator	122
7.3.1.1	Shovel excavators – slack-line excavators (classical)	124
7.3.1.2	Hydraulic excavators	129
7.3.2	Mining with bucket excavators (dragline)	134
7.3.3	Mining with a slack-line scraper	137
7.4	Mining technology with continuous excavators	138
7.4.1	Mining with a bucket chain excavator	139
7.4.1.1	Frontal mining with a bucket chain excavator	145
7.4.1.2	Work of a bucket chain excavator in a block	147
7.4.1.3	Dependence of parameters of cutting and force necessary for excavation	149
7.4.2	Mining with bucket wheel excavators	151
7.4.2.1	Mesh parameters of a bucket wheel excavator	157
7.4.2.2	Mesh parameters in dependence on technical parameters of a bucket wheel excavator	158
7.4.2.3	Cut parameters by a bucket wheel excavator	163
7.4.2.4	Mining with a hydraulic bucket wheel excavator	168
7.5	Mining technology with dozers	169
7.5.1	Stripping of deposits with dozers (or scrapers)	175
7.6	Mining technology with scrapers	177
7.7	Mining technology with scrapers	186
7.8	Mining technology with surface miners	188
7.8.1	Surface miners with middle drum configuration – SM	190
7.8.2	Surface miners with front drum configuration – MTS	192
7.8.3	Compact miners - MTS-C	194
7.8.4	Surface miners with front boom cutting drum	196
7.8.5	Large surface miners with front cutting wheel – KSM	198
7.8.5.1	Possible applications of large surface miners KSM	205
7.9	Mining technology with drilling-blasting operations	207
7.9.1	Drilling operations	207
7.9.1.1	Physical – mechanical properties that are important in terms of rock drillability	207
7.9.1.2	Systematics of rock drilling	208
7.9.1.3	Mechanical drilling methods	208
7.9.1.4	Non-mechanical drilling methods	209
7.9.1.5	Selection of drilling sets	209
7.9.2	Mining technology by blasting operations	212
7.9.2.1	General conditions	212
7.9.2.2	Selection of drill well diameter	215
7.9.2.3	Line of minimum resistance	215
7.9.2.4	Drill well network	216
7.9.2.5	Selection of explosive	217

7.9.2.6	Kinds of explosives	219
7.9.2.7	Initiation of charges	220
7.10	Front end loaders (tractor shovels)	220
7.10.1	Surface mining applications of FEL	224
7.11	Hydromining technology	228
8	TRANSPORT TECHNOLOGY	229
8.1	Freight truck traffic	232
8.1.1	Mutual dependence of loading and transport mechanisms	238
8.1.2	Vehicular transport capacity	240
8.1.3	Selection of loading machine/excavator – truck system	243
8.2	Rail haulage – railway transport	244
8.2.1	Locomotives	245
8.2.2	Gondola cars	246
8.3	Belt conveyance	248
8.3.1	Diagram of transport and conveyance system with belt conveyance	249
8.3.2	Structure of conveyor belt components	251
8.4	Belt wagons (mobile transfer conveyors)	255
8.4.1	Division of belt wagons	255
8.5	Material loading and discharging devices for belt conveyance	256
8.6	Combined transport	258
8.7	Preliminary crushers	260
8.8	Rope haulage	267
8.9	Gravity transport	268
8.10	Water-carriage	269
9	DUMPING MANAGEMENT	270
9.1	Purpose of loading	271
9.2	Dumping classification and methods	273
9.3	Stowing procedure	273
9.4	Mining waste dumps discharged with excavators	275
9.4.1	Stowing with a shovel excavator	275
7.4.2	Stowing with a dragline excavator	276
9.5	Hydraulic dumps	277
9.6	Mechanisms for stowing	277
9.6.1	Plough	278
9.6.2	Spreaders	278
9.6.2.1	Bucket reclaimers / spreaders	278
9.6.2.2	Jib-type (console) spreaders	279
10	RECLAMATION OF TERRITORY AFFECTED BY MINING	281
10.1	Classification of areas affected by mining	283
10.2	Methods of reclamation	285
10.2.1	Technical conditions of reclamation	285
10.2.1.1	Technology of spreading topsoil	286
10.3	Biological reclamation	286
10.3.1	Fundamentals of biological reclamation	286
10.3.1.1	Biological reclamation of an area affected by mining	289
10.3.1.2	Biological reclamation of the ground level	289
10.3.1.3	Completion of biological reclamation of a quarry	290

11	ANALYSIS OF INVESTMENTS IN THE MINING INDUSTRY	291
11.1	Study of the Basic Project	293
11.2	Tools of Economic Decision Making	303
11.3	Economic Variables of the Project	315
CONCLUSION		324
