

Content

1	Introduction	19
2	Basic Criteria of Dam Design	20
2.1	Function of Dams	21
2.2	Selection of a Site for Dam Construction	21
2.3	Determining Factors for the Selection of a Site and Type of Dams	23
2.3.1	Geological Factors of the Selection of a Dam Site	23
2.3.2	Topographic Factors in the Selecting a Dam Site	36
2.3.3	Effect of Climatic Conditions on the Selection of Types of Dams	43
2.3.4	Seismic Effects	44
2.3.5	Construction Materials	45
2.3.6	Ecological Factors Affecting the Construction of Reservoirs	46
2.3.7	Environmental Impact Assessment (EIA) in Relation to Construction and Operation ...	48
3	Methods Used to Carry Out an Engineering-Geological Survey	49
3.1	Tasks of the Engineering-Geological Survey	50
3.2	Rules Governing of Procedures Used in an Engineering-Geological Survey	51
3.2.1	Rule of Step-by-Step Procedures in Carrying Out an Engineering-Geological Survey	51
3.2.2	The Rule of Comprehensiveness of Engineering-Geological Survey	52
3.2.3	Accuracy, Detail and Economy of an Engineering-Geological Survey	52
3.3	Procedure of Carrying Out an Engineering-Geological Survey	53
3.3.1	Choice of a Survey Method	53
3.3.2	Significance of Engineering-Geological Survey in Preparatory Work and Construction	55
3.3.3	Basic Strategy for an Engineering-Geological Survey	56
3.4	The Planned Stages of an Engineering-Geological Survey	64
3.5	Technical Specifications and Project of Survey Work	66
3.5.1	Technical Specifications	66
3.5.2	Designing the Geological Survey Work	67
4	Engineering-Geological Mapping	72
4.1	Definition of Tasks of Engineering-Geological Mapping	72
4.2	The Compilation and Presentation of an Engineering-Geological Maps	76
4.3	Work Flow for Compilation of Engineering-Geological Maps	80
4.3.1	Preparation Work	81
4.3.2	Fieldwork	82
4.3.3	Laboratory Work	86
4.4	Engineering-Geological Mapping of Special Areas	87
5	Hydrogeological Survey	92
5.1	Preliminary Hydrogeological Survey	93
5.2	Detailed Hydrogeological Survey	99
5.2.1	Hydrogeological Survey for Preliminary Design	99
5.2.2	Hydrogeological Survey for Detailed Design	104
6	Geophysical Surveys	109
6.1	Tasks of a Geophysical Survey	110
6.2	Choice of Geophysical Methods	118
6.3	Use of Geophysical Methods	121
6.3.1	Geoelectrical Methods	125
6.3.2	Seismic Methods	130
6.3.3	Logging Methods	140
6.3.4	Other Geophysical Methods	147
7	Direct Survey Work	152
7.1	Drilling Surveys	152
7.2	Mining Work	157
7.3	Scope of Subsurface Exploration Work	159
7.4	Comprehensive Documentation of Exploratory Workings	170
7.4.1	Documentation of Tunnels and Pits	171
7.4.2	Description of Exploratory Boreholes	180
7.4.3	Observations Made during Construction	183
7.5	Application of RQD for Geotechnical Evaluation of the Rock Mass	185
7.6	Trends of Direct Survey Work	189

8 Geotechnical Surveys	190
8.1 General Rules for Geotechnical Surveys	190
8.2 The Rock Environment as a Determining Factor in Dam Design	196
8.3 Methods Used for Geotechnical Surveys	198
8.3.1 Identification of Deformation Properties	199
8.3.2 Detection of Strength Parameters	201
8.3.3 Measurement of the State of Stress in the Rock Mass	205
8.3.4 Tests of Permeability	208
8.3.5 Final Report on the Results of a Geotechnical Survey	209
8.4 Correlations between Parameters	209
8.4.1 Causal Relationships	210
8.4.2 Statistical Relationships	215
8.5 Practical Examples	217
9 Engineering-Geological Survey of the Reservoir Areas	236
9.1 Modification of Reservoir Banks	237
9.2 Modification of Banks and Slope Failures	247
9.2.1 The Area of Landslides at Goral	251
9.2.2 The Landslides at Ústic nad Priebradou	252
9.2.3 The Landslides at Osada Site	254
9.3 Examples of Phenomena Affecting the Banks of Water Reservoirs in Other Countries	256
10 Conclusion	268
Abbreviations	272
References	273
Index	286
List of place	288
List of figures	290
List of tables	294
Content	295
