

TABLE OF CONTENTS¹

Key-Note Lectures

1. Kazakevitch M.I.	11
State T U of Railway Transport Eng., Dnepropetrovsk, Ukraine	
Structure Stabilization in the Wind Flow	
2. Pirner M.	33
Inst. of Theor. and Applied Mech., Acad. of Sci., Prague, Czech Rep.	
Reliability of Structures Loaded by Wind	
3. Popov N.	49
State Inst. for Buildings and Structures, Moscow, Russia	
Dynamics of Complex Structures under Wind Loads	
4. Ruscheweyh H.	63
RWTH Aachen, Germany	
Damping Systems against Wind induced Vibrations of Slender Structures	

Session I - Theory, Numerical problems

1. Carassale L., Piccardo G., Solari G.	81
DISEG, Univ. of Genoa, Italy	
Wind Response of Structures by Double Modal Transformation	
2. Cremona Ch., Solares A. P.	89
Central Lab. of Bridges and Roadways, Paris, France	
Simplified Approach for Assessing Bridge Buffeting Response with Interaction	
3. Flaga A., Michalowski T.	97
Inst. of Structural Mechanics, TU Cracow, Poland	
Aerodynamic Stability Analysis of Footbridge of Inclined Cable System	
4. Chmielewski T., Górski P.	105
Faculty of Civil Eng., TU Opole, Poland	
Along Wind Response of TV-Tower	
5. Jícha M., Katolický J.	113
Dept. of Mechanical Eng., TU Brno, Czech Rep.	
Traffic Induced Flow Field, Concentration and Turbulence inside a Vehicle Tunnel	
6. Lewandowski R.	121
Poznan University of Technology, Poland	
An Application of the Harten-Currie Model and the Finite Element Method	
7. Taylor I., Vezza M.	127
Dept. of Aerospace Eng., Univ. of Glasgow, UK	
Computation of Unsteady Wind Loading on Bluff Bodies Using a Discrete Vortex Method	
8. Timofeyev N.	135
Donbass State Academy of Civil Eng. and Architecture, Makayevka, Ukraine	
Numerical Study of Wind Mode of a Territory Development	

¹Some titles of the papers had to be abbreviated

9. Usachov A., Sudakov A., Zdanov V.	143
Central Aerohydrodyn. Inst., Moskva, Russia	
The Numerical Analysis of the Oscillations of Bluff Bodies in Wind	
 Session II - Meteorology, Ecology	
1. Akopdjanyan Y., Mosseev Y.	149
GosNIIAS, Moscow, Russia	
The Study of Flow around Moscow Stadium "Luzniki"	
2. Baranov A., Belousova L., Isaev S.	155
Academy of Civil Aviation, Sankt Petersburg, Russia	
Forecasting of the Wind Regime Characteristics in Area of the Airport "Pulkovo"	
3. Byzova N., Khaschaturova L., Kulizhnikova L., Mazurin N.	161
Institute of Experimental Meteorology, Obninsk, Russia	
Wind Gust Estimation after Turbulence Data in One Case of Unstable Wind	
4. Ivanova L.A., Nadyozhina E.D.	165
Dept. of Mathematics, TU St.-Petersburg, Russia	
The Response of Wind and Turbulence Characteristics inside the Wind Farm	
5. Kinash R.	173
Dept. Civil Eng. TU Lviv, Ukraine	
Statistical Generalization of Wind Conditions in Surface Layer on Ukraine.	
6. Leitl B., Schatzmann M.	177
Meteorological Inst. University of Hamburg, Germany	
Compilation of Data for Validation of Microscale Numerical Dispersion Models	
7. Nadyozhina E. D., Shklyarevich O. B., Sternsat A. V.	185
Main Geophysical Observatory, St.-Petersburg, Russia	
Wind Engineering Applications of the Simple Boundary Layer Model	
8. Sasaki R., Yamada M., Uematsu Y., Saeki H.	193
Tech. Res. Inst. Nishimatsu Constr., Kanagawa, Japan	
Wind Environment Assessment Based on Bodily Sensation in Open Air	
 Session III - Experiment (model, in situ)	
1. Bálek V., Jaňour Z.	201
Inst. of Thermomechanics, Acad. of Sci., Prague, Czech Rep.	
Atmospheric Boundary Layer Wind Tunnel Modelling at the Institute of Thermo- mechanics	
2. Bartoli G., Gioffre M., Gusella V.	207
Dept. of Civ. Eng, Univ. of Florence, Italy	
Comparative Measurement on the CAARC Standard Tall Building	
3. Bezrukov D., Bezrukov V., Pugachov V.	215
Inst. of Physical Energetics, Latvian Acad. of Sci., Riga, Latvia	
Analysis of Wind Loads on Radiotelescope RT-32	

4. Damsgaard A., Larsen S. V. 221
Danish Maritime Inst., Lyngby, Denmark
Wind-Tunnel Investigation of Turbulence at Airports Located in Complex Terrain
5. Feranec V., Feranec T. 227
Faculty of Civil Eng., University of Žilina, Slovakia
Local Wind Pressures on Arched-Roof Buildings and Structures in Groups
6. Hémon P., Santi F., Bourdeix M.T. 233
Inst. of Aerotechnics/CNAM, Saint-Cyr-L'Ecole, France
Experimental Investigation of Wind-Induced Oscillations by means of Piezo-Electric Sensors
7. Jirsák M., Král J., Hora A. 241
Aeronaut. Research and Test Inst., Prague, Czech Rep.
Progress on VZLÚ/ KÚ BLWT Performance
8. Jonáš P. 247
Inst. of Thermomechanics, Acad. of Sci., Prague, Czech Rep.
A Contribution to the Problem of Simulating an Atmospheric Boundary Layer
9. Kazakevitch M. I., Vasilenko G. A., Gouzova I. I. 253
State T U of Railway Transport Eng., Dnepropetrovsk, Ukraine
The Admissible Flexibility of Structure Elements in the Flow
10. Kazakevitch M. I., Grafski I. Y., Kozarinski I. V., Sulaberidze O. G., Shagarov A. I. 257
State T U of Railway Transport Eng., Dnepropetrovsk, Ukraine
Aerodynamic Characteristics of Prismatic Bodies in the Wake
11. Kiefer H., Plate E. J. 263
Dept. of Structural Aerodynamics, Univ. of Karlsruhe, Germany
Wind Loads on Buildings in Built up Areas - Results from Full-Scale and Wind-Tunnel
12. Koeltzsch K. dotfill 271
Univ. of Technology, Dresden, Germany
A Wind Tunnel Study about the Validity of the Taylor-Hypothesis
13. Larichkin V.V., Berezin M.M. 279
Novosibirsk State T U, Novosibirsk, Russia
Influence of Lengthwise Superstructures on the Surface of Circular Cylinder
14. Li Li, Zhang T. 287
Dept. of Civil Eng., Huazhong Univ., Wuhan, P. R. China
The Artificial Wind Load and a Flexible Tower for Control Test
15. Liedtke J., Leidl B., Schatzmann M. 291
Meteorological Inst., University of Hamburg, Germany
Car Exhaust Dispersion in a Street Canyon - Wind Tunnel Data
16. Natalini B., De Bortoli M. E. , Natalini M. B. 299
Fac. of Engineering, North-East Nat. Univ., Resistencia - Chago, Argentina
The Simulation of a Neutrally Stable Atmospheric Boundary Layer in a Wind Tunnel

VOLUME II

17. Pirner M., Fischer O. 315
Inst. of Theor. and Appl. Mechanics, Acad. of Sci., Prague, Czech Rep.
Influence of Torsional Rigidity on Aeroelastic Stability of Stress-Ribbon Foot-bridges
18. Pospíšil S. 321
Inst. of Theor. and Appl. Mechanics, Acad. of Sci., Prague, Czech Rep.
Measurement of Wind-Induced Dynamic Pressures on an Aeroelastic Model
19. Radu A., Pescaru R., Stefanescu D. 329
Fac. of Civil Eng., TU Iasi, Romania
Some Attempts on Managing the Negative Wind Action at Low-Rise Level
20. Santi F., Hémon P. 335
Inst. of Aerotechnics/CNAM, Saint-Cyr-L'Ecole, France
Wake Analysis of a H - Section Cylinder versus Wind Tunnel Blockage
21. Bao-Shi Shiau 341
Dept. of Harbor and River Eng., Nat. Ocean Univ., Keelung, Taiwan
Effect of Turbulence Intensity on the Flow behind Two Cylinders
22. Studničková M. 349
Klokner Inst., TU Prague, Czech Rep.
Wind Tunnel Study of Cross Sections of Concrete Bridges and Footbridges
23. Sygulski R. 357
Poznan University of Technology, Poland
Stability of Pneumatic Structures in Wind
24. Szepesi Z., Lajos T. 363
Dept. of Fluid Mechanics, TU Budapest, Hungary
Wind Tunnel Investigation on Flow Interaction of Two Buildings
25. Vozniak O., Kinash R. 371
Dept. Civil Eng. TU Lviv, Ukraine
Frontal Resistance Coefficient of the LAZ Busses with the Different Ventilation Equipment
26. Wdowiak M., Manko Z. 377
Civil Eng. Inst., TU Wroclaw, Poland
Aerodynamic Stability of Cable-Stayed Bridge Deck Structures Based on Wind Tunnel Study
27. Wittwer A.R., De Bortoli M. E., Natalini M., B. 385
Fac. of Engineering, North-East Nat. Univ., Resistencia - Chago, Argentina
The Importance of the Analysis of Velocity Fluctuations
28. Hanqing Wu, Kai Wang, Stathopoulos T. 391
Centre for Building Studies, Concordia Univ., Montreal, Canada
Pressure Coefficients for Gable Roofs of Intermediate Slopes

Section IV - Dynamic response

1. Bosak G., Flaga A. 399
Inst. of Structural Mechanics, TU Cracow, Poland
Response of High-Rise Buildings to Wind in Conditions of Feedbacks
2. Tang Jiaxiang, Huang Bin 407
Dept. of Civil Eng., Huazhong Univ., Wuhan, P.R. China
The Wind Vibration Response of Ultra-High Voltage Electrical Tower
3. Kanda M., Maruta E., Matsuyama T., Inaba D. 415
Dept. of Architecture, Nihon University, Chiba, Japan
Study on a Method of Identifying External Forces and Damping of Structure
4. Kulyabko V., Davidov I. 423
State Acad. of Civil Eng. and Architecture, Dnepropetrovsk, Ukraine
Simulation of Dynamic Responses of Structures on Elastic-Dissipate Foundation
5. Marek P., Pirner M., Vlk M. 429
Inst. of Theor. and Appl. Mechanics, Acad. of Sci., Prague, Czech Rep.
Fatigue Life of a Tubular Posts Exposed to Wind
6. Melashvili Y. K. 435
Inst. of Structural Mech. and Seismic Stability, Tbilisi, Georgia
Aerodynamic Calculation of Big Size Glass a Different Plan-Form for Shop-Window
7. Peil U. 443
Steel Structure Inst., TU Braunschweig, Germany
Collapse Behaviour of Guyed Masts under Gales and Guy-Rupture
8. Perelmuter A. V., Mikitarenko M. A. 455
Ukrainian Inst. of Steel Constructions, Kyiv, Ukraine
Vibration Safety of the Personnel in Multi-storey Buildings under Wind Load
9. Ricciardelli F. 463
Dept. of Structural Design, Univ. of Naples, Italy
Tuned Mass Dampers to Reduce the Wind Excited Response of Structures
10. Sulaberidze O. 471
Inst. of Structural Mech. and Earthquake Eng., Tbilisi, Georgia
Wind Oscillations of a Tall Monument with Excentrically Attached Mass
11. Vadluga R., Kudzys A. 475
Techn. University, Vilnius, Lithuania
Structural Safety of Concrete Tower Structures under Wind Loading

Section V - Wind loading, Codes

1. Axinte E. 481
Faculty of Construction, TU Iasi, Romania
Local Effects of the Wind upon the Perimetral Cladding of the High-Rise Buildings

2. Kumar K., S.	487
Faculty of Architecture, Building and Planning, TU Eindhoven, Holland	
Pressure Equalization Performance of Rainscreen Walls - Exp. Investigations	
3. Kuznetsov S.	495
Donbass State Academy of Civil Eng. and Architecture, Makayevka, Ukraine	
Deformation of Air Flow in a Development under the Influence of a Building	
4. Pagnini L. C., Solari G.	503
DISEG, Univ. of Genoa, Italy	
Wind Actions and Effects on Steel Poles and Monotubular Towers	
5. Pichugin S.	511
State Technical University, Poltava, Ukraine	
Probabilistic Specification of Design Wind Load Coefficients	
6. Ling Qian, Vezza M.	517
Dept. of Aerospace Eng., Univ. of Glasgow, UK	
Discrete Vortex Simulation of Aerofoil Blade-Vortex Interaction	
7. Uematsu Y., Yamada M., Sasaki A., Hongo T.	525
Fac. of Engineering, Tohoku Univ., Sendai, Japan	
Design Wind Loads for Structural Frames of Circular Flat Roof	

Section VI - Wind Energy

1. Hansen P. N.	533
Vestas - Danish Wind Technology, Lem, Denmark	
Vestas and the Danish Experience	
2. Kuflov A. F., Leontiev A. I., Loshkarev A. I.	541
Bauman State TU, Moskva, Russia	
Multipurpose Wind Turbine Unit (MWTU)	
3. Marques da Silva F., Estanqueiro A. I., Castro R., Jesus J., Saraiva J.	549
LNEC - NDA, Lisboa, Portugal	
MISTRAL - a Tool to Evaluate the Impact of Wind Parks on Electric Distribution Systems	
4. Ushiyama I.	557
Dept. Mech. Eng., Ashikaga Inst. of Technology, Ashikaga-City, Japan	
Wind Energy Activities in Japan	

Note: Empty pages in the text have been filled by the figures from the textbook of Mechanics by Franz Anton Ritter von Gerstner (Prague, 1831)
