About the Series Editors xv

Part I DNA Synthesis and Genome Engineering 1

1	Competition and the Future of Reading and Writing DNA 3
	<i>Robert Carlson</i>
1.1	Productivity Improvements in Biological Technologies 3
1.2	The Origin of Moore's Law and Its Implications for Biological Technologies 5
1.3	Lessons from Other Technologies 6
1.4	Pricing Improvements in Biological Technologies 7
1.5	Prospects for New Assembly Technologies 8
1.6	Beyond Programming Genetic Instruction Sets 10
1.7	Future Prospects 10
	References 11
2	Trackable Multiplex Recombineering (TRMR) and Next-Generation Genome Design Technologies: Modifying Gene Expression in <i>E. coli</i> by Inserting Synthetic DNA Cassettes and Molecular Barcodes 15
	<i>Emily F. Freed, Gur Pines, Carrie A. Eckert, and Ryan T. Gill</i>
2.1	Introduction 15
2.2	Current Recombineering Techniques 16
2.2.1	Recombineering Systems 17
2.2.2	Current Model of Recombination 17
2.3	Trackable Multiplex Recombineering 19
2.3.1	TRMR and T ² RMR Library Design and Construction 19
2.3.2	Experimental Procedure 23
2.3.3	Analysis of Results 24
2.4	Current Challenges 25
2.4.1	TRMR and T ² RMR are Currently Not Recursive 26
2.4.2	Need for More Predictable Models 26
2.5	Complementing Technologies 27
2.5.1	MAGE 27
2.5.2	CREATE 27

2.6	Conclusions	28			
	Definitions	28			
	References	29			
3	Site-Directed Genome Modification with Engineered Zinc Finger Proteins	33			
	<i>Lauren E. Woodard, Daniel L. Galvan, and Matthew H. Wilson</i>				
3.1	Introduction to Zinc Finger DNA-Binding Domains and Cellular Repair Mechanisms	33			
3.1.1	Zinc Finger Proteins	33			
3.1.2	Homologous Recombination	34			
3.1.3	Non-homologous End Joining	35			
3.2	Approaches for Engineering or Acquiring Zinc Finger Proteins	36			
3.2.1	Modular Assembly	37			
3.2.2	OPEN and CoDA Selection Systems	37			
3.2.3	Purchase via Commercial Avenues	38			
3.3	Genome Modification with Zinc Finger Nucleases	38			
3.4	Validating Zinc Finger Nuclease-Induced Genome Alteration and Specificity	40			
3.5	Methods for Delivering Engineered Zinc Finger Nucleases into Cells	41			
3.6	Zinc Finger Fusions to Transposases and Recombinases	41			
3.7	Conclusions	42			
	References	43			
4	Rational Efforts to Streamline the <i>Escherichia coli</i> Genome	49			
	<i>Gabriella Balikó, Viktor VERNYIK, Ildikó Karcagi, Zsuzsanna Györfy, Gábor Draskovits, Tamás Fehér, and György Pósfai</i>				
4.1	Introduction	49			
4.2	The Concept of a Streamlined Chassis	50			
4.3	The <i>E. coli</i> Genome	51			
4.4	Random versus Targeted Streamlining	54			
4.5	Selecting Deletion Targets	55			
4.5.1	General Considerations	55			
4.5.1.1	Naturally Evolved Minimal Genomes	55			
4.5.1.2	Gene Essentiality Studies	55			
4.5.1.3	Comparative Genomics	56			
4.5.1.4	<i>In silico</i> Models	56			
4.5.1.5	Architectural Studies	56			
4.5.2	Primary Deletion Targets	57			
4.5.2.1	Prophages	57			
4.5.2.2	Insertion Sequences (ISs)	57			
4.5.2.3	Defense Systems	57			
4.5.2.4	Genes of Unknown and Exotic Functions	58			
4.5.2.5	Repeat Sequences	58			
4.5.2.6	Virulence Factors and Surface Structures	58			
4.5.2.7	Genetic Diversity-Generating Factors	59			
4.5.2.8	Redundant and Overlapping Functions	59			
4.6	Targeted Deletion Techniques	59			
4.6.1	General Considerations	59			
4.6.2	Basic Methods and Strategies	60			
4.6.2.1	Circular DNA-Based Method	60			
4.6.2.2	Linear DNA-Based Method	62			
4.6.2.3	Strategy for Piling Deletions	62			
4.6.2.4	New Variations on Deletion Construction	63			
4.7	Genome-Reducing Efforts and the Impact of Streamlining	64			
4.7.1	Comparative Genomics-Based Genome Stabilization and Improvement	64			
4.7.2	Genome Reduction Based on Gene Essentiality	66			
4.7.3	Complex Streamlining Efforts Based on Growth Properties	67			
4.7.4	Additional Genome Reduction Studies	68			
4.8	Selected Research Applications of Streamlined-Genome <i>E. coli</i>	68			
4.8.1	Testing Genome Streamlining Hypotheses	68			
4.8.2	Mobile Genetic Elements, Mutations, and Evolution	69			
4.8.3	Gene Function and Network Regulation	69			
4.8.4	Codon Reassignment	70			
4.8.5	Genome Architecture	70			
4.9	Concluding Remarks, Challenges, and Future Directions	71			
	References	73			
5	Functional Requirements in the Program and the Cell Chassis for Next-Generation Synthetic Biology	81			
	<i>Antoine Danchin, Agnieszka Sekowska, and Stanislas Noria</i>				
5.1	A Prerequisite to Synthetic Biology: An Engineering Definition of What Life Is	81			
5.2	Functional Analysis: Master Function and Helper Functions	83			
5.3	A Life-Specific Master Function: Building Up a Progeny	85			
5.4	Helper Functions	86			
5.4.1	Matter: Building Blocks and Structures (with Emphasis on DNA)	87			
5.4.2	Energy	91			
5.4.3	Managing Space	92			
5.4.4	Time	95			
5.4.5	Information	96			
5.5	Conclusion	97			
	Acknowledgments	98			
	References	98			

Part II Parts and Devices Supporting Control of Protein Expression and Activity 107

Constitutive and Regulated Promoters in Yeast: How to Design and Make Use of Promoters in *S. cerevisiae* 109

Diana S. M. Ottoz and Fabian Rudolf

Introduction 109

Yeast Promoters 110

Natural Yeast Promoters 113

Regulated Promoters 113

Constitutive Promoters 115

Synthetic Yeast Promoters 116

Modified Natural Promoters 116

Synthetic Hybrid Promoters 117

10 Programming Gene Expression by Engineering Transcript Stability Control and Processing in Bacteria 189

Jason T. Stevens and James M. Carothers

10.1 An Introduction to Transcript Control 189

10.1.1 Why Consider Transcript Control? 189

0.1.3	The Effects of Translation on Transcript Stability	192
0.1.4	Structural and Noncoding RNA-Mediated Transcript Control	193
0.1.5	Polyadenylation and Transcript Stability	195
0.2	Synthetic Control of Transcript Stability	195
0.2.1	Transcript Stability Control as a "Tuning Knob"	195
0.2.2	Secondary Structure at the 5' and 3' Ends	196
0.2.3	Noncoding RNA-Mediated	197
0.2.4	Model-Driven Transcript Stability Control for Metabolic Pathway Engineering	198
0.3	Managing Transcript Stability	201
0.3.1	Transcript Stability as a Confounding Factor	201
0.3.2	Anticipating Transcript Stability Issues	201
0.3.3	Uniformity of 5' and 3' Ends	202
0.3.4	RBS Sequestration by Riboregulators and Riboswitches	203
0.3.5	Experimentally Probing Transcript Stability	204
0.4	Potential Mechanisms for Transcript Control	205
0.4.1	Leveraging New Tools	205
0.4.2	Unused Mechanisms Found in Nature	206
0.5	Conclusions and Discussion	207

17 Synthetic Biology in Immunotherapy 349

Patrick Ho and Yvonne Y. Chen

- 17.1 The Need for a New Therapeutic Paradigm 349
- 17.2 Rationale for Cellular Therapies 350
- 17.3 Synthetic Biology Approaches to Cellular Immunotherapy Engineering 351
 - 17.3.1 CAR Engineering for Adoptive T-Cell Therapy 352
 - 17.3.2 Genetic Engineering to Enhance T-Cell Therapeutic Function 357
 - 17.3.3 Generating Safer T-Cell Therapeutics with Synthetic Biology 359
- 17.4 Challenges and Future Outlook 362
 - Acknowledgment 364
 - Definitions 364
 - References 365

Part V Societal Ramifications of Synthetic Biology 373

18 Synthetic Biology: From Genetic Engineering 2.0 to Responsible Research and Innovation 375

Lei Pei and Markus Schmidt

- 18.1 Introduction 375
- 18.2 Public Perception of the Nascent Field of Synthetic Biology 376
 - 18.2.1 Perception of Synthetic Biology in the United States 377
 - 18.2.2 Perception of Synthetic Biology in Europe 379
 - 18.2.2.1 European Union 379
 - 18.2.2.2 Austria 379

18.2.2.3	Germany	381
18.2.2.4	Netherlands	382
18.2.2.5	United Kingdom	383
18.2.3	Opinions from Concerned Civil Society Groups	384
18.3	Frames and Comparators	384
18.3.1	Genetic Engineering: Technology as Conflict	386
18.3.2	Nanotechnology: Technology as Progress	387
18.3.3	Information Technology: Technology as Gadget	387
18.3.4	SB: Which Debate to Come?	388
18.4	Toward Responsible Research and Innovation (RRI) in Synthetic Biology	389
18.4.1	Engagement of All Societal Actors – Researchers, Industry, Policy Makers, and Civil Society – and Their Joint Participation in the Research and Innovation	390
18.4.2	Gender Equality	391
18.4.3	Science Education	392
18.4.4	Open Access	392
18.4.5	Ethics	394
18.4.6	Governance	395
18.5	Conclusion	396
	Acknowledgments	397
