

INDEX

PREFACE.....	3
1 Precipitation.....	7
1.1 Rainfall measurements.....	8
1.1.1 Rain gauges	8
1.1.2 Methods of measurement.....	10
1.1.3 Errors and accuracy of readings	11
1.1.4 Rain gauge location	12
1.1.5 Other forms of measurement	13
1.2 Analysis of rainfall data	16
1.2.1 Basics of rainfall data	16
1.2.2 Wallingford procedure manual method.....	19
1.2.3 Areal extent.....	22
1.2.4 Flood estimation handbook	22
1.3 Single events	23
1.3.1 Synthetic design storms	23
1.3.2 Historical single events.....	24
1.4 Multiple events	24
1.4.1 Historical time-series	24
1.4.2 Synthetic time-series.....	26
1.4.3 Calculating mean rainfall on a watershed.....	27
1.4.4 Errors associated with rainfall measurement.....	29
1.4.5 Analysis of rainfall measurement.....	30
1.5 Case study.....	33
1.5.1 Intensity, duration and frequency of rainfall	33
1.5.2 Precipitation measurements and rainfall intensity calculation	34
1.6 Partial summary	37
2 Rainwater infiltration to the ground – basics of the process, devices and dimensioning of systems	42
2.1 Rainwater treatment in the ground.....	42
2.2 Basics of designing of rainwater infiltration devices.....	43
2.2.1 Water-permeability of soil.....	43
2.2.2 Run-off coefficient	46
2.2.3 Rainfall duration.....	47
2.2.4 Precipitation intensity	47
2.2.5 Probability of rainfall occurrence.....	48
2.2.6 Methods of determining amount of rainfall run-off.....	48
2.2.6.1 The method of critical intensities with Błaszczyk's formula.....	48
2.2.6.2 The method of constant intensities.....	49
2.3 Rainwater infiltration to the ground.....	50
2.3.1 Introduction	50
2.3.2 Rainwater infiltration devices and systems	51
2.3.2.1 Pervious surface	51
2.3.2.2 Perforated pavements	52
2.3.2.3 Infiltration chambers	52
2.3.2.4 Infiltration trenches	54
2.3.2.5 Absorptive basins	55

2.3.2.6	Infiltration ponds	56
2.3.2.7	Infiltration wells	58
2.3.2.8	Rigolas	59
3	Retention reservoirs in sewage systems	62
3.1	Introduction to the issue of retention of waste water in sewage systems	62
3.2	Current research directions in the field of water retention	64
3.3	Conditions and justification for the research	67
3.4	Research purposes and range	68
3.5	Solutions of storage reservoirs applied in sewage systems	69
3.6	Development of the theory and improvement of models of storage reservoirs ...	74
3.7	Economic and application importance of the research	79
3.8	Partial summary	82
4	Concentrated runoff	87
4.1	Introduction	87
4.2	Open channels and their properties	87
4.2.1	Types of open channels	87
4.2.2	Types of flow	88
4.2.3	Fundamental equations	90
4.3	Steady non-uniform flow in natural and artificial channels	91
4.3.1	Standard step method	91
4.3.2	Manning's roughness coefficient	95
4.3.3	Practical problems relating to determine the roughness coefficient	96
5	Ways for channel roughness Determination by grain size curves	103
5.1	Factors affect to resistance	103
5.2	Expression of roughness	105
5.3	Ways to determine a roughness	106
5.4	Grain size curve	108
5.5	Grain size curve creating	109
5.6	Grain size curves comparing	111
5.7	Partial summary and recommendations	113
