ABSTRACT	4
ABSTRAKT	6
FUNDAMENTAL THEORY	7
1. ER and MR suspensions under external static fields	7
2. ER and MR structures	7
3. Rheological properties.....	10
3.1 <i>Steady shear behaviour</i>	10
3.2 <i>Viscoelastic properties</i>	13
4. Dispersed phase for ER suspensions	15
5. Factors influencing the ER effect	16
5.1 <i>Dielectric properties of suspensions</i>	16
5.2 <i>External electric field strength</i>	19
6. Dispersed phase for MR suspensions.....	20
7. Factors influencing MR effect.....	21
7.1 <i>Magnetic properties</i>	21
7.2 <i>External magnetic field strength</i>	23
7.3 <i>Redispersibility</i>	24
8. Further factors influencing ER and MR effects	25
8.1 <i>Temperature</i>	25
8.2 <i>Particle concentration, size and shape</i>	25
9. Liquid medium for ER and MR suspensions	26
AIMS OF THE DOCTORAL STUDY.....	27
SUMMARY OF THE PAPERS	28
10. Enhanced ER efficiency	28
11. Effect of conducting polymer polypyrrole on ER efficiency	29
12. ER material prepared in one-step synthesis	29
13. Improvement of the sedimentation stability	30
14. Covalently coated particles with enhanced redispersive properties	31
CONTRIBUTION TO THE SCIENCE.....	33
ACKNOWLEDGEMENT	34
LIST OF SYMBOLS AND ACRONYMS.....	35
REFERENCES.....	36
LIST OF PUBLICATIONS	46
