

1 Content

1	Introduction.....	1
1.1	basic properties of the toroid.....	1
1.2	main differences between the standard model and RT.....	3
2	Models of the proton and the neutron.....	5
3	Modeling the structures of atomic nuclei	8
4	Modeling the electron	15
4.1	Quantum numbers	16
4.2	shape and size of the electron in RT-based models.....	19
4.3	calculating the electron radius via spectral lines	22
4.4	electron levitation.....	24
5	Modeling the atom via RT.....	30
5.1	Expressing and quantifying the forces and distances in the modeled atoms.....	35
5.2	Model of the hydrogen atom	35
5.3	Model of the deuterium atom	41
5.4	Model of the tritium atom	42
5.5	Model of the hydrogen ion (H_2^+).....	43
5.6	Model of the helium atom	44
6	RT-based models of molecules.....	46
6.1	Covalent bonding	46
6.2	Model of the hydrogen molecule (H_2).....	48
6.3	Modeling various molecules in RT	49
7	Conclusion	55
7.1	Acknowledgement.....	55
7.2	References	55

Fig. 1 The orientation of the coordinates and parameters of the basic toroid.
