

CONTENTS:	5
1 INTRODUCTION	7
2 BRIEF DEVELOPMENT OF KNOWLEDGE	7
2.1 <i>Base of theory of lateral earth pressure</i>	7
2.2 <i>Advanced numerical models</i>	7
2.3 <i>Physical Modelling</i>	8
2.4 <i>Twenty Years of Geotechnical Physical Modelling at the Institute</i>	10
3 OBJECTIVES OF THE INSTITUTE RESEARCH PROJECT	10
4 EXPERIMENTAL EQUIPMENT	11
4.1 <i>Equipment resulted</i>	12
4.2 <i>Hardware and software</i>	13
5 EXPERIMENTAL TECHNIQUES	14
5.1 <i>Test technique</i>	14
5.2 <i>Data recording</i>	15
5.3 <i>Visual monitoring</i>	15
5.4 <i>Data</i>	16
6 PROPERTIES OF SAMPLES	17
6.1 <i>Material</i>	17
6.2 <i>Properties</i>	17
6.3 <i>Test samples</i>	17
7 FLOW OF EXPERIMENTS	19
7.1 <i>Passive pressure - E5/0,3 and E6/0,3</i>	20
7.2 <i>Active pressure - E7/0,3 and E8/0,3</i>	20
8 RESULTS	22
8.1 <i>Strain processes</i>	22
8.1.1 <i>Experiments with pressure at rest and passive pressure – E5/0,3 and E6/0,3</i>	22
8.1.1.1 <i>Slip surfaces</i>	25
8.1.1.2 <i>Displacements</i>	28
8.1.2 <i>Experiments with active pressure – E7/0,3 and E8/0,3</i>	29
8.1.2.1 <i>Slip surfaces</i>	32
8.1.2.2 <i>Displacements</i>	34
8.2 <i>Stress processes</i>	37
8.2.1 <i>Wall-soil contact stresses</i>	37
8.2.2 <i>Pressure components</i>	38
8.2.3 <i>Friction on walls</i>	38
8.2.3.1 <i>Samples contra retaining walls</i>	38
8.2.3.2 <i>Samples contra lateral glass sides</i>	39
8.2.4 <i>Normal pressure on moved wall</i>	39
8.2.4.1 <i>Pressure at rest</i>	40
8.2.4.2 <i>Passive pressure</i>	41
8.2.4.3 <i>Active pressure</i>	41
8.2.4.4 <i>Reaction moduli</i>	43
8.2.5 <i>Distribution of normal pressure on moved wall</i>	47
8.2.5.1 <i>Notation of pressures and symbols</i>	47
8.2.5.2 <i>Pressure at rest</i>	48
8.2.5.3 <i>Passive pressure</i>	49
8.2.5.4 <i>Active pressure</i>	50
8.2.6 <i>Normal pressure on stable back wall</i>	53
8.2.6.1 <i>Pressure at rest</i>	53
8.2.6.2 <i>Passive pressure</i>	54
8.2.6.3 <i>Active pressure</i>	55
8.2.7 <i>Distribution of normal pressure on stable back wall</i>	57
8.2.7.1 <i>Pressure at rest</i>	57
8.2.7.2 <i>Passive pressure</i>	57
8.2.7.3 <i>Active pressure</i>	59

9	DEPENDENCIES OF OVERALL PRESSURE EFFECTS ON WALL DISPLACEMENT	61
	9.1 <i>Pressure at rest</i>	62
	9.2 <i>Passive pressure</i>	62
	9.3 <i>Active pressure</i>	65
	9.4 <i>Complete dependences</i>	67
	9.4.1 <i>Total normal force</i>	68
	9.4.2 <i>Moment of total normal force to the toe</i>	68
10	DESIGN OF THEORETICAL DEPENDENCIES	69
	10.1 <i>Non-cohesive soils</i>	69
	10.1.1 <i>Analysis symbols</i>	70
	10.1.2 <i>Analytical solution</i>	71
	10.1.3 <i>Theoretical pressures</i>	72
	10.1.4 <i>Theoretical wall movements</i>	74
	10.1.5 <i>Designed dependence pressure-movement</i>	74
	10.1.6 <i>Comparison to the experiments</i>	76
	10.2 <i>Cohesive soils</i>	77
	10.2.1 <i>Analogical model</i>	77
	10.2.2 <i>Cohesive sample</i>	77
	10.2.3 <i>Designed dependence pressure-movement</i>	78
11	INSTABILITY OF LATERAL EARTH PRESSURE	79
	11.1 <i>Instability factors</i>	80
	11.2 <i>Time instability</i>	80
	11.3 <i>First observation of time instability</i>	80
	11.4 <i>Research of time instability</i>	83
	11.4.1 <i>Active pressure at rest</i>	83
	11.4.2 <i>Passive pressure at rest</i>	86
	11.4.3 <i>Passive pressure</i>	86
	11.4.4 <i>Active pressure</i>	90
	11.4.5 <i>Temperature influence</i>	93
	11.5 <i>Evaluation</i>	94
	11.5.1 <i>Rest phases of pressure at rest</i>	95
	11.6 <i>Results</i>	96
12	FAST PROCESSES IN THE MASS	96
	12.1 <i>Experiment E5/0,2</i>	96
	12.2 <i>Pressure analysis</i>	97
	12.3 <i>Conclusions</i>	100
13	CONSEQUENCES OF TIME INSTABILITY	100
14	LATERAL PRESSURE THEORY	101
15	CONSEQUENCES FOR PRACTICE	102
	15.1 <i>Routine numerical models</i>	102
	15.2 <i>Very advanced numerical models</i>	103
16	CONCLUSIONS	103
	16.1 <i>Principal observations</i>	103
	16.2 <i>Relevance of observations in model tests to full-scale behaviour</i>	104
17	CONCLUDING REMARKS	105
18	REFERENCES	107
