Preface	XI
1 Metallocenium Salts of Radical Anion Bis(Dichalcogenate) Metalates <i>Vasco Gama and Maria Teresa Duarte</i>	1
1.1 Introduction	1
1.2 Basic Structural Motifs	4
1.2.1 ET Salts Based on Decamethylmetallocenium Donors	4
1.2.2 ET Salts Based on Other Metallocenium Donors	6
1.3 Solid-state Structures and Magnetic Behavior	7
1.3.1 Type I Mixed Chain Salts	7
1.3.2 Type II Mixed Chain $[M(Cp^*)_2][M'(L)_2]$ Salts	21
1.3.3 Type III Mixed Chain $[M(Cp^*)_2][M'(L)_2]$ Salts	23
1.3.4 Type IV Mixed Chain $[M(Cp^*)_2][M'(L)_2]$ Salts	30
1.3.5 Salts with Segregated Stacks not 1D Structures	36
1.4 Summary and Conclusions	37
References	39
2 Chiral Molecule-Based Magnets <i>Katsuya Inoue, Shin-ichi Ohkoshi, and Hiroyuki Imai</i>	41
2.1 Introduction	41
2.2 Physical and Optical Properties of Chiral or Noncentrosymmetric Magnetic Materials	41
2.2.1 Magnetic Structure and Anisotropy	42
2.2.2 Nonlinear Magneto-optical Effects	43
2.2.3 Magneto-chiral Optical Effects	48
2.3 Nitroxide-manganese Based Chiral Magnets	49
2.3.1 Crystal Structures	49
2.3.2 Magnetic Properties	51
2.4 Two- and Three-dimensional Cyanide Bridged Chiral Magnets	53
2.4.1 Crystal Design	54
2.4.2 Two-dimensional Chiral Magnet [39]	54
2.4.3 Three-dimensional Chiral Magnet [40]	57

2.4.4	Conclusion	60
2.5	SHG-active Prussian Blue Magnetic Films	60
2.5.1	Magnetic Properties and the Magneto-optical Effect	60
2.5.2	Nonlinear Magneto-optical Effect	64
2.6	Conclusion	68
	References	69
3	Cooperative Magnetic Behavior in Metal-Dicyanamide Complexes	
	<i>Jamie L. Manson</i>	71
3.1	Introduction	71
3.2	“Binary” α -M(dca) ₂ Magnets	73
3.2.1	Structural Aspects	73
3.2.2	Ferromagnetism	76
3.2.3	Canted Antiferromagnetism	79
3.2.4	Mechanism for Magnetic Ordering	81
3.2.5	Pressure-dependent Susceptibility	82
3.3	β -M(dca) ₂ Magnets	82
3.3.1	Structural Evidence	82
3.3.2	Magnetic Behavior of α -Co(dca) ₂	84
3.3.3	Comparison of Lattice and Spin Dimensionality in α - and β -Co(dca) ₂	85
3.4	Mixed-anion M(dca)(tcm)	85
3.4.1	Crystal Structure	85
3.4.2	Magnetic Properties	86
3.5	Polymeric 2D (cat)M(dca) ₃ cat = Ph ₄ As, Fe(bipy) ₃	87
3.5.1	(Ph ₄ As)[Ni(dca) ₃]	87
3.5.2	[Fe(bipy) ₃][M(dca) ₃] ₂ {M = Mn, Fe}	88
3.6	Heteroleptic M(dca) ₂ L Magnets	88
3.6.1	Mn(dca) ₂ (pyz)	89
3.6.2	Mn(dca) ₂ (2,5-Me ₂ pyz) ₂ (H ₂ O) ₂	95
3.6.3	Mn(dca) ₂ (H ₂ O)	96
3.6.4	Fe(dca) ₂ (pym)·EtOH	97
3.6.5	Fe(dca) ₂ (abpt) ₂	98
3.7	Dicyanophosphide: A Phosphorus-containing Analog of Dicyanamide	99
3.8	Conclusions and Future Prospects	100
	References	101
4	Molecular Materials Combining Magnetic and Conducting Properties	
	<i>Peter Day and Eugenio Coronado</i>	105
4.1	Introduction	105
4.2	Interest of Conducting Molecular-based Magnets	106

4.2.1	Superconductivity and Magnetism	107
4.2.2	Exchange Interaction between Localised Moments and Conduction Electrons	108
4.3	Magnetic Ions in Molecular Charge Transfer Salts	111
4.3.1	Isolated Magnetic Anions	111
4.3.2	Metal Cluster Anions	131
4.3.3	Chain Anions: Maleonitriledithiolates	143
4.3.4	Layer Anions: Tris-oxalatometallates	146
4.4	Conclusions	153
	References	155
5	Lanthanide Ions in Molecular Exchange Coupled Systems	
	<i>Jean-Pascal Sutter and Myrtil L. Kahn</i>	161
5.1	Introduction	161
5.1.1	Generalities	161
5.2	Molecular Compounds Involving Gd(III)	164
5.2.1	Gd(III)–Cu(II) Systems	164
5.2.2	Systems with Other Paramagnetic Metal Ions	165
5.2.3	Gd(III)-organic Radical Compounds	165
5.3	Superexchange Mediated by Ln(III) Ions	170
5.4	Exchange Coupled Compounds Involving Ln(III) Ions with a First-order Orbital Momentum	174
5.4.1	Qualitative Insight into the Exchange Interaction	174
5.4.2	Quantitative Insight into the Exchange Interaction	180
5.4.3	The Exchange Interaction	181
5.5	Concluding Remarks	185
	References	185
6	Monte Carlo Simulation: A Tool to Analyse Magnetic Properties	
	<i>Joan Cano and Yves Journaux</i>	189
6.1	Introduction	189
6.2	Monte Carlo Method	190
6.2.1	Generalities	190
6.2.2	Metropolis Algorithm	192
6.2.3	Thermalization Process	193
6.2.4	Size of Model and Periodic Boundary Conditions	194
6.2.5	Random Number Generators	196
6.2.6	Magnetic Models	196
6.2.7	Structure of a Monte Carlo Program	197
6.3	Regular Infinite Networks	199
6.4	Alternating Chains	203
6.5	Finite Systems	206
6.6	Exact Laws versus MC Simulations	208

6.6.1	A Method to Obtain an ECS Law for a Regular 1D System: Fisher's Law	209
6.6.2	Small Molecules	211
6.6.3	Extended Systems	213
6.7	Some Complex Examples	217
6.8	Conclusions and Future Prospects	220
	References	220
7	Metallocene-based Magnets	
	<i>Gordon T. Yee and Joel S. Miller</i>	223
7.1	Introduction	223
7.2	Electrochemical and Magnetic Properties of Neutral Decamethylmetallocenes and Decamethylmetallocenium Cations Paired with Diamagnetic Anions	224
7.3	Preparation of Magnetic Electron Transfer Salts	226
	7.3.1 Electron Transfer Routes	226
	7.3.2 Metathetical Routes	226
7.4	Crystal Structures of Magnetic ET Salts	227
7.5	Tetracyanoethylene Salts (Scheme 7.2)	230
	7.5.1 Iron	230
	7.5.2 Manganese	232
	7.5.3 Chromium	232
	7.5.4 Other Metals	232
7.6	Dimethyl Dicyanofumarate and Diethyl Dicyanofumarate Salts	233
	7.6.1 Manganese	233
	7.6.2 Chromium	234
7.7	2,3-Dichloro-5,6-dicyanoquinone Salts and Related Compounds	235
7.8	2,3-Dicyano-1,4-naphthoquinone Salts	236
	7.8.1 Iron	236
	7.8.2 Manganese	237
	7.8.3 Chromium	238
7.9	7,7,8,8-Tetracyano- <i>p</i> -quinodimethane Salts	238
	7.9.1 Iron	238
	7.9.2 Manganese	239
	7.9.3 Chromium	239
7.10	2,5-Dimethyl- <i>N, N'</i> -dicyanoquinodiimine Salts	239
	7.10.1 Iron and Manganese	239
7.11	1,4,9,10-Anthracenetetrone Salts	240
7.12	Cyano and Perfluoromethyl Ethylenedithiolato Metalate Salts	240
	7.12.1 Iron	241
	7.12.2 Manganese	241

7.13	Benzenedithiolates and Ethylenedithiolates	244
7.14	Additional Dithiolate Examples	245
7.15	Bis(trifluoromethyl)ethylenediselenato Nickelate Salts	246
7.16	Other Acceptors that Support Ferromagnetic Coupling, but not Long-range Order above ~ 2 K	246
7.17	Other Metallocenes and Related Species as Donors	249
7.18	Muon Spin Relaxation Spectroscopy	251
7.19	Mössbauer Spectroscopy	251
7.20	Spin Density Distribution from Calculations and Neutron Diffraction Data	253
7.21	Dimensionality of the Magnetic System and Additional Evidence for a Phase Transition	253
7.22	The Controversy Around the Mechanism of Magnetic Coupling in ET Salts	254
7.23	Trends	255
7.24	Research Opportunities	256
	References	257
8	Magnetic Nanoporous Molecular Materials	
	<i>Daniel MasPOCH, Daniel Ruiz-Molina, and Jaume Veciana</i>	261
8.1	Introduction	261
8.2	Inorganic and Molecular Hybrid Magnetic Nanoporous Materials . .	263
8.3	Magnetic Nanoporous Coordination Polymers	266
	8.3.1 Carboxylic Ligands	266
	8.3.2 Nitrogen-based Ligands	271
	8.3.3 Paramagnetic Organic Polytopic Ligands	273
8.4	Summary and Perspectives	278
	References	280
9	Magnetic Prussian Blue Analogs	
	<i>Michel Verdaguer and Gregory S. Girolami</i>	283
9.1	Introduction	283
9.2	Prussian Blue Analogs (PBA), Brief History, Synthesis and Structure	284
	9.2.1 Formulation and Structure	285
	9.2.2 Synthesis	288
9.3	Magnetic Prussian Blues (MPB)	290
	9.3.1 Brief Historical Survey of Magnetic Prussian Blues	291
	9.3.2 Interplay between Models and Experiments	293
	9.3.3 Quantum Calculations	306
9.4	High T_C Prussian Blues (the Experimental Race to High Curie Temperatures)	322
	9.4.1 Chromium(II)–Chromium(III) Derivatives	323

9.4.2	Manganese(II) –Vanadium(III) Derivatives	324
9.4.3	The Vanadium(II) –Chromium(III) Derivatives	325
9.4.4	Prospects in High- T_C Magnetic Prussian Blues	334
9.5	Prospects and New Trends	338
9.5.1	Photomagnetism: Light-induced Magnetisation	338
9.5.2	Fine Tuning of the Magnetisation	339
9.5.3	Dynamics in Magnetic and Photomagnetic Prussian Blues	339
9.5.4	Nanomagnetism	339
9.5.5	Blossoming of Cyanide Coordination Chemistry	340
9.6	Conclusion: a 300 Years Old “Inorganic Evergreen”	341
	References	341
10	Scaling Theory Applied to Low Dimensional Magnetic Systems	
	<i>Jean Souletie, Pierre Rabu, and Marc Drillon</i>	347
10.1	Introduction	347
10.2	Non-critical-scaling: the Other Solutions of the Scaling Model	348
10.3	Universality Classes and Lower Critical Dimensionality	351
10.4	Phase Transition in Layered Compounds	352
10.5	Description of Ferromagnetic Heisenberg Chains	363
	10.5.1 Application to Ferromagnetic $S = 1$ Chains	366
10.6	Application to the Spin-1 Haldane Chain	368
10.7	Conclusion	375
	References	375
	Index	379
