

CONTENTS

CHAPTER 1 Scientific Thinking in Psychology 1

Why Take This Course?	3
Ways of Knowing	6
Authority	6
Use of Reason	6
Experience	7
The Ways of Knowing and Science	8
Science as a Way of Knowing	9
Science Assumes Determinism	10
Science Makes Systematic Observations	11
Science Produces Public Knowledge	11
Box 1.1 <i>ORIGINS—A Taste of Introspection</i>	13
Science Produces Data-Based Conclusions	14
Science Produces Tentative Conclusions	16
Science Asks Answerable Questions	16
Science Develops Theories that Can Be Disproven	17
Psychological Science and Pseudoscience	18
Recognizing Pseudoscience	19
Associates with True Science	20
Box 1.2 <i>CLASSIC STUDIES—Disproving Phrenology</i>	21
Relies on Anecdotal Evidence	23

Sidesteps Disproof	24
Reduces Complex Phenomena to Overly Simplistic Concepts	25
The Goals of Research in Psychology	26
Description	26
Prediction	26
Explanation	27
Application	27
A Passion for Research in Psychology (Part I)	27
Eleanor Gibson (1910–2002)	28
B. F. Skinner (1904–1990)	30

CHAPTER 2

Ethics in Psychological Research 37

Developing the APA Code of Ethics	38
<i>Box 2.1 CLASSIC STUDIES—Infants at Risk</i>	39
Ethical Guidelines for Research with Humans	44
Judging Benefits and Costs: The IRB	44
Informed Consent and Deception in Research	47
<i>Box 2.2 ETHICS—Historical Problems with Informed Consent</i>	53
Informed Consent and Special Populations	55
Treating Participants Well	57
Research Ethics and the Internet	59
Ethical Guidelines for Research with Animals	61
The Issue of Animal Rights	61
<i>Box 2.3 ORIGINS—Antivivisection and the APA</i>	62
Using Animals in Psychological Research	64
The APA Code for Animal Research	66
Justifying the Study	66
Caring for the Animals	66
Using Animals for Educational Purposes	67
Scientific Fraud	67
Data Falsification	68

CHAPTER 3

Developing Ideas for Research in Psychology 77

Varieties of Psychological Research	78
Basic versus Applied Research	78
The Setting: Laboratory versus Field Research	80

Box 3.1 <i>ETHICS—A Matter of Privacy</i>	83
Quantitative versus Qualitative Research	84
Asking Empirical Questions	85
Operational Definitions	85
Developing Research from Observations of Behavior and Serendipity	87
Box 3.2 <i>ORIGINS—Serendipity and Edge Detectors</i>	89
Developing Research from Theory	90
The Nature of Theory	90
The Relationship Between Theory and Data	92
Attributes of Good Theories	95
Falsification	95
Box 3.3 <i>CLASSIC STUDIES—Falsification and Der Kluge Hans</i>	96
Parsimony	98
Misunderstandings about Theories	99
Developing Research from Other Research	100
Research Teams and the “What’s Next?” Question	100
Replication and Extension	102
Creative Thinking in Science	103
Reviewing the Literature	106
Computerized Database Searches	106
Search Tips	107

CHAPTER 4

Measurement and Data Analysis 117

What to Measure—Varieties of Behavior	118
Developing Measures from Constructs	119
Box 4.1 <i>ORIGINS—Reaction Time: From Mental Chronometry to Mental Rotation</i>	122
Evaluating Measures	124
Reliability	124
Validity	125
Reliability and Validity	128
Scales of Measurement	129
Nominal Scales	129
Ordinal Scales	131
Interval Scales	131

Box 7.1 *CLASSIC STUDIES—Psychology's Most Widely Replicated Finding?* 239

- Analyzing Single-Factor, Two-Level Designs 243
- Single Factor—More Than Two Levels 244
- Between-Subjects, Multilevel Designs 245

Box 7.2 *ORIGINS—Nonlinear Results: The Ebbinghaus Forgetting Curve* 246

- Within-Subjects, Multilevel Designs 250
- Presenting the Data 251
- Types of Graphs 252
- Analyzing Single-Factor, Multilevel Designs 254

Control Group Designs 256

- Placebo Control Groups 256
- Waiting List Control Groups 257

Box 7.3 *ETHICS—Who's in the Control Group?* 257

- Yoked Control Groups 261

CHAPTER 8

Experimental Design II: Factorial Designs 269

Factorial Essentials 270

- Identifying Factorial Designs 271

Outcomes—Main Effects and Interactions 273

- Main Effects 273
- Interactions 277
- Combinations of Main Effects and Interactions 281

Box 8.1 *CLASSIC STUDIES—To Sleep, Perchance to Recall* 285

Varieties of Factorial Designs 287

- Mixed Factorial Designs 288
- Factorials with Subject and Manipulated Variables: $P \times E$ Designs 291
- Recruiting Participants for Factorial Designs 297

Box 8.2 *ETHICS—On Being a Competent and Ethical Researcher* 297

- Analyzing Factorial Designs 299

Box 8.3 *ORIGINS—Factorials Down on the Farm* 300

CHAPTER 9

Correlational Research 307

- Psychology's Two Disciplines 308

Box 9.1 ORIGINS—Galton's Studies of Genius	309
Correlation and Regression—The Basics	311
Positive and Negative Correlations	311
Scatterplots	313
Assuming Linearity	314
Restricting the Range	316
Coefficient of Determination— r^2	317
Regression Analysis—Making Predictions	318
Interpreting Correlations	320
Correlations and Causality	321
Directionality	321
Third Variables	323
Caution: Correlational Statistics versus Correlational Research	325
Using Correlations	327
The Need for Correlational Research	327
Varieties of Correlational Research	328
Box 9.2 ETHICS—APA Guidelines for Psychological Testing	329
Box 9.3 CLASSIC STUDIES—The Achieving Society	332
Multivariate Analysis	334
Multiple Regression	334
Factor Analysis	336
CHAPTER 10	
Quasi-Experimental Designs and Applied Research	343
Beyond the Laboratory	345
Applied Psychology in Historical Context	347
Box 10.1 ORIGINS—Hugo Münsterberg: Applied Psychologist Extraordinaire	349
Design Problems in Applied Research	350
Quasi-Experimental Designs	351
Nonequivalent Control Group Designs	352
Outcomes	353
Regression and Matching	355
Interrupted Time Series Designs	360
Outcomes	361
Variations on the Basic Time Series Design	364
Research Using Archival Data	365
Program Evaluation	369

Avoiding Plagiarism	474
Miscellaneous	475
Main Sections of the Lab Report	476
Title Page	476
The Manuscript Page Header/Page Number	476
Running Head	476
Title/Author/Affiliation	477
Abstract	478
Introduction	478
APA Citation Format	479
Method	479
Results	480
Reporting the Data: Statistics	480
Portraying the Data: Tables and Figures	481
Discussion	482
References	482
Presentations and Posters	483
Tips for Presenting a Paper	483
Tips for Presenting a Poster	484
A Sample Research Report	486

APPENDIX B

The Ethics Code of the American Psychological Association 501

Category 8: Research and Publication	501
--------------------------------------	-----

APPENDIX C

Using Statistics 507

Making Intelligent Use of Statistics	508
Assessing Relationships	508
Example 1. Pearson's r	508
Example 2. Regression Analysis	510
Assessing Differences	511
Example 3. χ^2 —Goodness of Fit	511
Example 4. χ^2 —Two Samples	512

Example 5. Mann-Whitney *U* Test 514

Example 6. *t* Test—Independent Groups 516

Example 7. *t* Test—Dependent Groups 518

Example 8. 1-Way ANOVA—Independent Groups 520

Example 9. 1-Way ANOVA—Repeated Measures 523

Example 10. 2-Way ANOVA—2 × 2 Independent Groups 525

APPENDIX D

Statistical Tables 529

Table D.1. Random Numbers 530

Table D.2. Critical Values for Pearson's *r* 532

Table D.3. Critical Values for Chi-Square (χ^2) 532

Table D.4. Critical Values for the Mann-Whitney *U* Test 533

Table D.5. Critical Values from the *t* Distribution 535

Table D.6. Critical Values from the *F* Distribution 536

APPENDIX E

Answers to End-of-Chapter Applications Exercises 541

GLOSSARY 553
