Preface — VII

Questions discussed — XV

1 Introduction and overview — 1

Bibliography — 6

2 Analyzing complex formation — 7

2.1 Thermodynamic and kinetic aspects — 7

2.2 Analytical strategies and techniques — 17

2.2.1 Strategies — 17

2.2.2 NMR spectroscopy — 23

2.2.3 UV-vis spectroscopy — 28

2.2.4 Fluorescence spectroscopy — 30

2.2.5 Potentiometry — 30

2.2.6 Isothermal titration calorimetry — 32

Bibliography — 36

3 Understanding molecular recognition — 37

3.1 Modes of binding — 37

3.1.1 General considerations — 37

3.1.2 Ion-ion interactions — 40

3.1.3 Ion-dipole interactions — 42

3.1.4 Dipole-dipole interactions — 44

3.1.5 Hydrogen bonding — 45

3.1.6 Halogen bonding — 54

3.1.7 Cation- π interactions — 56

3.1.8 Anion- π interactions — 60

3.1.9 Aromatic-aromatic interactions — 62

3.1.10 Dispersion interactions — 64

3.2 Binding energies — 66

3.2.1 General considerations — 66

3.2.2 Trend analyses — 67

3.2.3 Double-mutant cycles — 69

3.2.4 Molecular balances — 71

3.3 Solvent effects — 72

3.4 Predicting binding strength in solution — 80

3.5 Guidelines for receptor design — 85

3.5.1 Complementarity, preorganization, and induced fit — 85

3.5.2 Chelate effect and macrocyclic effect — 87

3.5.3 Multivalency and cooperativity — 89

3.5.4 Allosterism and cooperativity — 93

Bibliography — 98

4 Hosting ions and molecules — 101

4.1 Receptors — 101

4.1.1 Crown ethers — 101

4.1.2 Cryptands — 114

4.1.3 Spherands — 122

4.1.4 Cyclodextrins — 125

4.1.5 Cyclophanes — 137

4.1.6 Cyclotrimeratrylenes — 144

4.1.7 Calixarenes — 153

4.1.8 Calixpyrroles — 165

4.1.9 Resorcinarenes — 169

4.1.10 Pillararenes — 186

4.1.11 Cucurbiturils — 193

4.1.12 Clefts and tweezers — 204

4.1.13 Foldamers — 215

4.2 Substrates — 219

4.2.1 Inorganic and organic cations — 220

4.2.2 Inorganic and organic anions — 223

4.2.3 Zwitterions and ion pairs — 228

4.2.4 Neutral organic molecules — 231

Bibliography — 235

5 Assembling molecules — 245

5.1 Self-assembly and template effects — 245

5.2 Self-assembly mediated by the hydrophobic effect — 262

5.3 Self-assembly mediated by hydrogen bonds — 266

5.3.1 Introduction — 266

5.3.2 Rosettes — 271

5.3.3 Capsules — 278

5.3.4 Tubes — 290

5.4 Self-assembly mediated by halogen bonds — 295

5.4.1 Introduction — 295

5.4.2 Helices — 296

5.4.3 Capsules — 297

5.5 Self-assembly mediated by coordination bonds — 297

5.5.1 Introduction — 297

5.5.2 Helices — 302

5.5.3	Grids — 308
5.5.4	Rings — 309
5.5.5	Cages — 314
5.6	Self-assembly mediated by covalent bonds — 326
5.6.1	Introduction — 326
5.6.2	Rings — 330
5.6.3	Cages — 335
5.7	Dynamic combinatorial chemistry — 341
5.7.1	Introduction — 341
5.7.2	Casting — 348
5.7.3	Molding — 351
5.7.4	Self-assembly — 356
5.8	Systems chemistry — 358
	Bibliography — 360
6	Threading molecules — 369
6.1	Molecular topology — 369
6.2	Synthetic strategies — 374
6.2.1	Molecular strategies — 374
6.2.2	Supramolecular strategies — 380
6.3	Syntheses using metal coordination — 383
6.3.1	Catenanes — 383
6.3.2	Knots — 390
6.3.3	Rotaxanes — 394
6.4	Syntheses using charge-transfer interactions — 398
6.4.1	Catenanes — 398
6.4.2	Rotaxanes — 403
6.5	Syntheses using hydrogen bonds — 404
6.5.1	Catenanes — 404
6.5.2	Knots — 414
6.5.3	Rotaxanes — 416
6.6	Syntheses using halogen bonds — 418
6.6.1	Rotaxanes — 418
6.7	Syntheses using the hydrophobic effect — 420
6.7.1	Knots — 420
6.7.2	Rotaxanes — 423
	Bibliography — 424
7	Controlling molecular motion — 429
7.1	Introduction — 429
7.2	Rotaxane-derived machines — 439

7.3	Catenane-derived machines —	451
7.4	Machines without mechanical bonds —	454
	Bibliography —	459
8	Mediating molecular transformations —	463
8.1	Introduction —	463
8.2	Stoichiometric transformations —	471
8.2.1	Transformation by functional group participation —	471
8.2.2	Transformation by confinement —	475
8.3	Catalytic transformations —	481
8.3.1	Transformation by functional group participation —	481
8.3.2	Transformation by confinement —	493
8.4	Self-replication —	498
	Bibliography —	508
9	Transporting molecules —	513
9.1	Introduction —	513
9.2	Cation transport —	518
9.2.1	Channels —	518
9.2.2	Carriers —	522
9.3	Anion transport —	523
9.3.1	Channels —	523
9.3.2	Carriers —	525
9.4	Water transport —	528
	Bibliography —	530
10	Detecting molecules —	533
10.1	Introduction —	533
10.2	Single analyte sensing —	536
10.2.1	Direct optical sensing —	536
10.2.2	Indirect optical sensing —	542
10.2.3	Direct electrochemical sensing —	544
10.3	Multiple analyte sensing —	547
	Bibliography —	553
11	Applying supramolecular systems —	555
11.1	Introduction —	555
11.2	Applications in medicine —	556
11.2.1	Drugs —	556
11.2.2	Drug formulations —	558
11.2.3	Imaging —	559
11.3	Applications in separation processes —	562

11.3.1	Chromatography — 562
11.3.2	Extraction — 563
11.3.3	Precipitation — 565
11.4	Applications in materials chemistry — 567
11.4.1	Self-assembled polymers — 567
11.4.2	Polymer networks — 569
11.4.3	Self-assembled gels — 573
11.5	Applications in catalysis — 574
11.6	Applications in molecular electronics — 577
11.7	Applications in consumer products — 578
11.7.1	Textiles — 578
11.7.2	Food — 578
11.7.3	Household — 579
	Bibliography — 579
12	Appendices — 583
12.1	Concentrations in a 1:2 binding equilibrium — 583
12.2	Concentrations in an indicator displacement assay — 584
	Bibliography — 586
	Index — 587
