

CONTENTS

	<i>Introduction to the Transaction Edition</i>	ix
	<i>Preface</i>	xxix
I	<i>In the nature of an explanation and an apology</i>	3
II	<i>Being a discussion of the relationship between science and art</i>	15
III	<i>Leading up to the definition of bacteria and other parasites, and digressing briefly into the question of the origin of life</i>	34
IV	<i>On parasitism in general, and on the necessity of considering the changing nature of infectious diseases in the historical study of epidemics</i>	57
V	<i>Being a continuation of Chapter IV, but dealing more particularly with so-called new diseases and with some that have disappeared</i>	77
VI	<i>Diseases of the ancient world: a consideration of the epidemic diseases which afflicted the ancient world</i>	105
VII	<i>A continuation of the consideration of diseases of the ancients, with particular attention to epidemics and the fall of Rome</i>	128
VIII	<i>On the influence of epidemic diseases on political and military history, and on the relative unimportance of generals</i>	150

CONTENTS

- IX *On the louse: we are now ready to consider the environment which has helped to form the character of our subject* 166
- X *More about the louse: the need for this chapter will be apparent to those who have entered into the spirit of this biography* 179
- XI *Much about rats — a little about mice* 189
- XII *We are at last arriving at the point at which we can approach the subject of this biography directly* 212
- XIII *In which we consider the birth, childhood, and adolescence of typhus* 229
- XIV *In which we follow the earliest epidemic exploits of our disease* 240
- XV *Young manhood: the period of early vigor and wild oats* 265
- XVI *Appraisal of a contemporary and prospects of future education and discipline* 282
